

Dazelle:  
before she  
was sick

Dazelle Peters is 16 years old. A bone marrow transplant cured her leukaemia, but it also damaged her lungs. She now requires a double lung transplant but can't get on the transplant list, because she does not want the Covid shots. Instead, Dazelle is being offered two choices: Die naturally or receive palliative 'treatment'. Her reply, *"I'm not ready to die, it's not my time. Give me the transplant. If I die on the operating table, then at least I die fighting"*.

Dazelle is a brave, kind, creative, intelligent young girl.

She has made her own decision about the shots, due to their shocking lack of efficacy, alongside zero long-term data, for potential side effects. Many people are already injured by that particular shot. See: [www.lovecantstaysilent.com](http://www.lovecantstaysilent.com)

Every single day, injured drunk drivers, cancer riddled smokers, and known drug addicts, freely receive the medical help they need, without discrimination. It is disgusting that sweet, young Dazelle has been given this death sentence just because she wishes not to take part in a medical experiment. There is time to save her, but we must act now!

Please share her story. Stand up for her freedom to choose, and her right to live.

She is not the only one being denied life saving treatment, for this same reason. Winning her fight, will set a precedent for others, who are being denied organ transplants.

One day it could be you.

**END MEDICAL DISCRIMINATION!**
