RISK SOLUTIONS

Capability Statement

Practical risk, governance and HSE leadership for contractors, project teams and industrial operators

Positioning

Pioneering Risk Solutions helps contractors, project teams and industrial operators strengthen governance, risk and HSE systems so they can satisfy client scrutiny, improve operational control and deliver safely in live operating environments. The focus is practical uplift rather than paperwork for its own sake.

AT A GLANCE

- Enterprise risk and governance uplift
- HSE systems and operational improvement
- Audit, assurance and readiness reviews
- Incident and advisory support
- Veteran-owned Australian business

SUITABLE FOR

- Defence / Tier 1 and major project environments
- Industrial processing and high-hazard operations
- Mining, renewable energy and logistics settings
- Clients needing practical systems, assurance and leadership support

Core service pillars

Enterprise Risk and Governance

Enterprise risk frameworks and controls, governance support, risk reporting and executive visibility.

HSE Systems and Operational Uplift

WHS management system development and review, critical control uplift, remote work and contractor management, and field-ready procedures and tools.

Audit, Assurance and Readiness

Gap assessments, internal audits, readiness reviews, prequalification support and action close-out discipline.

Incident, Regulatory and Advisory Support

Serious incident support, factual review, regulator engagement and embedded advisory or interim leadership support.

Why clients engage PRS

- Bridges executive expectations and field execution.
- Translates frameworks and governance requirements into workable site controls and routines.
- Can step into live projects, identify weak points quickly and stabilise practical controls.
- Provides commercially aware advice aligned to delivery certainty, accountability and client confidence.

Selected experience profile

- Leadership across risk, assurance, governance, IT and HSE within a major zinc refinery environment, including high-risk systems oversight and executive reporting.
- Development and uplift of enterprise risk approaches across operating businesses spanning industrial processing, logistics and energy-related activities.
- Traffic management, contractor controls, mobile plant risk reviews, audit tools and practical safety improvements for industrial and project settings.
- Remote project operational uplift, including site management, roster, operational control and critical risk arrangements for Defence-related field activities.

FEATURED PROJECT EXAMPLE

Remote Defence-related Environmental Impact Study

Project context – Remote field project across a large operating area with environmental conditions, limited communications, travel and access constraints, accommodation/logistics demands and multiple fieldwork interfaces.

PRS role – Reviewed current HSE arrangements, identified site and project critical risks, linked corporate requirements to site execution, developed site management and roster controls, and provided on-site HSE lead and site manager support.

Outcomes – Improved site governance, clearer accountabilities, better visibility of planned work and risks, stronger operational control and an uplift from short-term planning to a more disciplined 4+ week look-ahead.

Commercial relevance – Demonstrates the ability to enter a live project, align corporate plans to field realities and support delivery through practical governance, site leadership and critical risk management.

Industries

- Defence and Defence-supporting contractors
- Mining and resources
- Industrial processing
- Renewable Energy
- Logistics and transport

Typical engagements

- Short-term uplift projects
- Audit and assurance programs
- Tender and prequalification support
- Embedded advisory or interim leadership
- Incident and regulatory support

Credentials

- Bachelor of Business Administration
- Advanced Diploma of Work Health and Safety
- Remote and Isolated 1st Aid Qualified
- AICD graduate
- Lead Auditor | ICAM | HAZOP
