

# PLASTIC PLATE SNOW GLOBE CRAFT

## SUPPLIES

- Clear plastic plate
- Black construction paper or toilet paper tube end
- Clear glue
- Crayons or Watercolor paints
- Styrofoam craft snow

- Scissors

## DIRECTIONS FOR PLASTIC PLATE SNOW GLOBE

1. Trace the outside of the clear plate on the paper.
2. Draw a picture on the snow globe template. an outdoor winter scene, but some other drawing prompt ideas include:

Something/someone you are thankful for

Your favorite winter activity

An outdoor winter scene

Favorite holiday tradition

A picture of yourself playing in the snow

3. Next, color in the picture with crayons. Don't forget to add white snowflakes to the sky! Using crayons or watercolors together is a beautiful art technique called watercolor resist.

4. When the paint is dry, cut out both parts of their snow globe. We used the snow globe base as a template and traced it onto black paper, but kids could also color it in with a black crayon.

5. Glue the snow globe base to the back of the snow globe. You can also use a toilet paper tube cut in a 1" section and cut it down on the sides to fit the globe in to use as a stand

6. Pour 1–2 tablespoons of Styrofoam snow onto the middle of the picture.

**Tip:** If you wish to use an environmentally friendly option as opposed to Styrofoam snow, punch white paper with a single hole punch or to create filler for their snow globes. You could also use small white pompoms, Epsom salt, or white rice.

7. Last, glue the plastic plate to the snow globe. I recommend leaving the snow globe in place until the glue dries to prevent the Styrofoam balls from adhering to the sides of the plate.
