

THE ONLY HOUSE WRAP MANUFACTURED TO SLOW THE PROGRESSION OF SMOKE AND FIRE

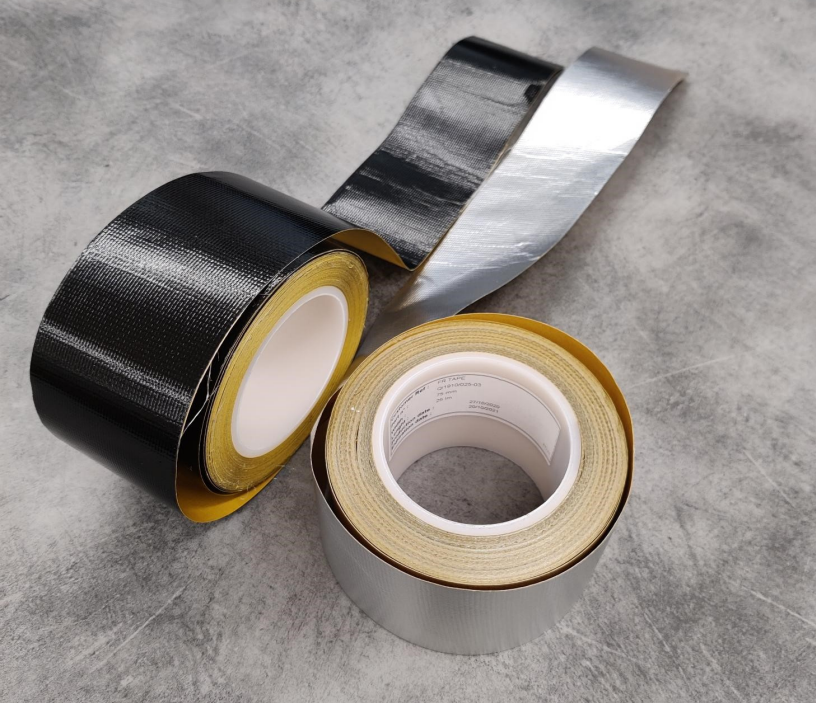

Did You Know?

- There are an estimated 358,300 house fires per year, causing 2,620 civilian deaths per year.
- On average, over 7,000,000 Acres across the country are burned by wildfires each year

What is FireFlex FR?

- Interior and Exterior house wrap
- Easy to Install
- NFPA Class A Fire Classification
- Non-combustible
- Emits little or no smoke
- Produces no flaming droplets or particles within first 10 minutes of fire exposure

What is the Installation Process?

Interior:

After insulation is installed, before drywall, FireFlex FR is stapled to the framing of the home, and then taped with our FireFlex FR Tape for an airtight seal.

Exterior:

This product is to be installed just like any other exterior house wrap. For an airtight seal, tape the seams with our FireFlex FR Tape.

Each roll can cover up to approximately 587 sqft of wall space, and we recommend two rolls of tape per one roll of house wrap. There is a more detailed installation guide on our website, and any questions can be answered by our team at Flexible Building Products.
