

Elevating Lighting Control: The Chris Controls Advantage

At **Chris Controls**, we provide premier white-glove integration and commissioning services for a diverse range of lighting control systems. We pride ourselves on delivering a level of support and technical expertise unmatched in the industry. Our solutions are universally compatible with any fixture schedule, ensuring that your vision is never limited by hardware constraints.

We partner with clients to design energy-code-compliant systems tailored to each project's unique needs, all while leveraging local wholesale electrical distribution for seamless procurement.

Our Core Services

The earlier we join a project, the more value we add. However, our team is equipped to step in at any phase—regardless of size, complexity, or manufacturer—to ensure a successful outcome.

1. Design Development & Specification

We identify the ideal control device for any fixture to ensure a cohesive, integrated system. By joining a project during the specification phase, we guide the design team toward the most cost-effective and simplified solution.

- **Wireless Expertise:** Specialists in Casambi Bluetooth, Bluetooth SIG, and IP Networks.
- **Wired Protocols:** Expert management of DALI, DMX, and proprietary manufacturer protocols.

2. Construction Integration

Compatibility is the cornerstone of a functional system. We bridge the gap between specified design and actualized hardware by creating comprehensive as-built submittals.

- **Protocol Harmonization:** We manage the complexity of projects using multiple dimming protocols (DALI, DMX, ELV, PWM, MLV, and 0-10V).
- **Pre-Project Verification:** We perform rigorous fixture-schedule reviews and pre-program all devices to final as-built drawings before they ever arrive on-site, drastically reducing installation errors.

3. System Deployment & Support

Our commitment continues through the life of the project. We offer:

- Comprehensive remote and on-site commissioning.
- Post-installation remote programming.
- Long-term system maintenance and optimization.

Why Partner with Chris Controls?

If lighting controls have become a bottleneck on your project, we offer the solution. We specialize in "outside the box" thinking, embracing innovative technologies to increase functionality while simultaneously reducing installation costs and complexity.

Our Mission: To deliver a lighting control system that outperforms the original specifications at a lower total cost to the end user.
