

Custom Branding & Domains

Enhance customer trust and maintain brand consistency by hosting your payment web app on a custom domain.

Visual Branding

To align the web app with your brand identity, please provide a basic branding kit. Email these assets to oliver@echopay.co.uk with your Merchant ID in the subject line.

Logo Requirements: A high-resolution PNG (transparent background preferred).

Domain Configuration Options

Choose the setup that best fits your technical resources and branding strategy.

Hosted Subdomain

The fastest way to get started. We host the page on our domain using your brand name.

Example: [merchant].echopay.co.uk

Instructions

1. Choose your desired prefix (usually your company name).
2. Submit the name to our team for availability verification.
3. We will provision the subdomain and notify you via email when it is active.

White-Label Domain

Maps a subdomain of your own website directly to our platform.

Example: payments.[your-domain].co.uk

Instructions

1. Send us the full subdomain you intend to use.
2. We will provide you with a specific CNAME record.
3. Add this record to your DNS settings (via providers like Cloudflare, GoDaddy, or Namecheap).
4. Once we detect the record, we will issue an SSL certificate and notify you.
