

Solar For Schools

Pre-Consultation Checklist

In order to streamline the process of developing a Solar Facility Site Assessment, we want to gather some basic information about the facilities being analyzed.

Info Requested	Why?	Ideal Situation
<u>Address(es)</u> of building(s)	Remote assessment of roof size and condition	Buildings are a good candidate for solar
<u>Ownership</u> of building(s)	Grant application will differ depending on the ownership status	Buildings are owned by the same entity that operates within the building and is applying for the grant
<u>Roof Age</u> (rough estimates are ok, any additional info about roofing material is helpful)	It generally doesn't make sense to install solar on very old roofs.	Roofs have been redone within the last 10 years. (Roofs older than 10 yrs can be workable, depending on roofing material/quality)
<u>Electric bill(s)</u>	Analyzing the existing electrical demand and utility rate structure / charges	The last 12 months of electric bills. (If that is challenging to get access to, then the most recent electric bill)

Please send all requested information to jackson@solar-possible.com in advance of Initial Consultation. If you are unable to get this information before the initial consultation, that is ok. Our conversation will just be somewhat limited by these unknown factors.

----- All of this info is required in order to complete the Solar Facility Site Assessment -----
