

# **Ionic Copper: A More Rational Use of Copper**

Ohio Operator's Training, OTCO  
4/22/2021

# Outline

1. What differentiates ionic copper from other coppers
2. Uses of ionic copper: target pests
  1. Algae control
  2. Mussel control
  3. Hydroids and bryozoans
3. Ancillary benefits
  - Reduction of TOC
  - Reduction of DBPs
  - Reduction of T&O
4. Cost Optimization – Cost Adjusted Performance

# Regulatory Status of Ionic Copper (as EarthTec and QZ)

- **EPA Labeled** as an Algaecide/Bactericide, Molluscicide
- Registered in **All 50 States** as Algaecide/Bactericide, in 30+ States as Molluscicide
- Certified to **NSF** Standard 60
- Most uses require no special permitting

Introduction

# What is ionic copper?

= cupric ion =  $\text{Cu}^{++}$

## Examples of some benefits:

- Effective pre-treatment of drinking water
- Results and performance at lower dose
- Add less chemical to the environment
- Conserve time, labor and money

Paul T. Anastas  
David G. Hammond

# Inherent Safety at Chemical Sites

Reducing Vulnerability to Accidents and  
Terrorism Through Green Chemistry

## Green Chemistry

# Green Chemistry

1. Prevent waste
2. Maximize atom economy
3. Design less hazardous chemical syntheses
4. Design safer chemicals and products
5. Use safer solvents and reaction conditions
6. Increase energy efficiency
7. Use renewable feedstocks
8. Avoid chemical derivatives
9. Use catalysts, not stoichiometric reagents
10. Design chemicals and products to degrade after use
11. Analyze in real time to prevent pollution
12. Minimize the potential for accidents

Source: Paul Anastas, PhD

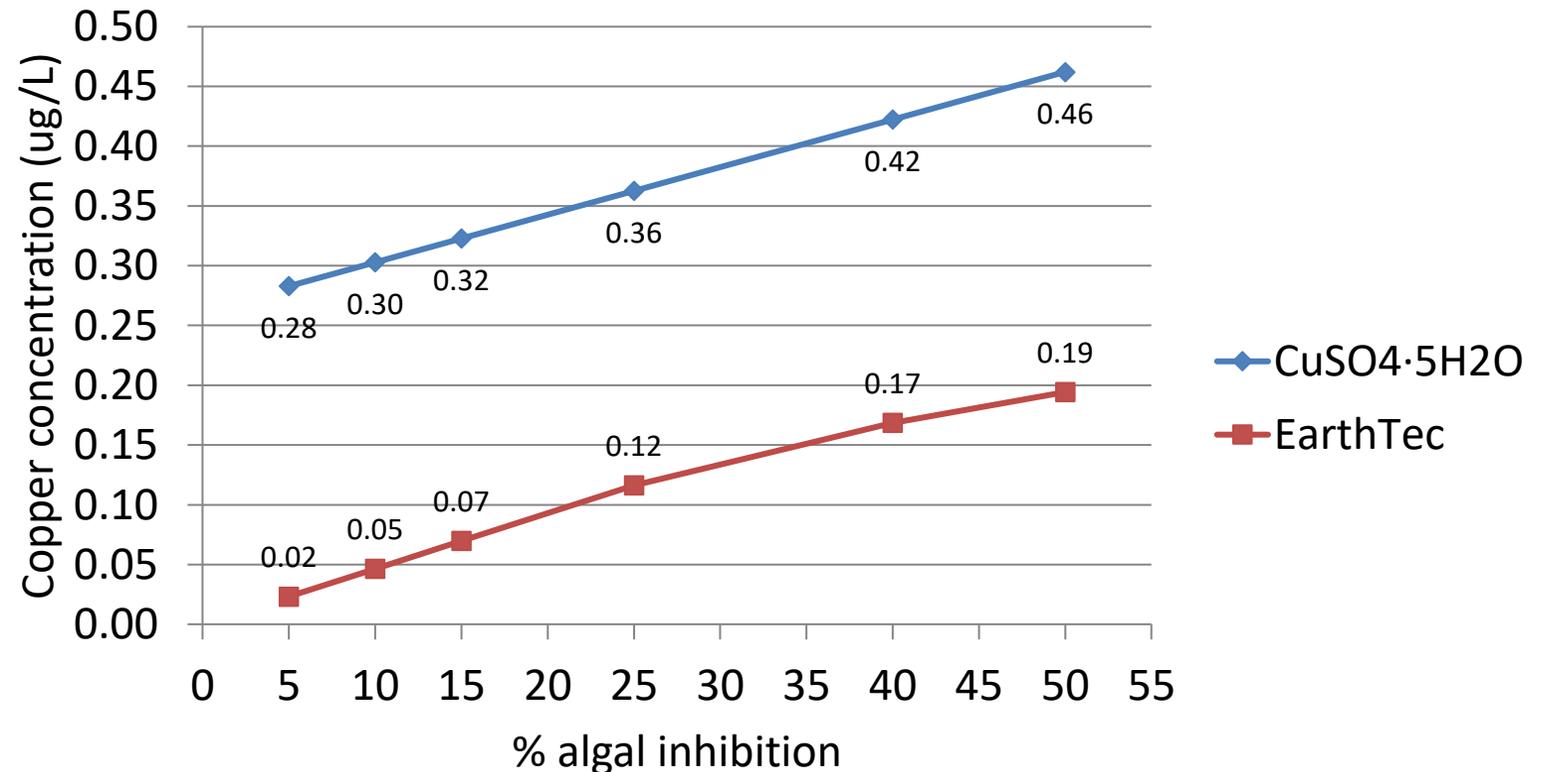

EarthTec is an example of Green Chemistry:

- More efficient formulation
- Desired benefits at lower doses
- Less waste
- Safer

# Copper Sulfate vs Ionic Copper

% Inhibition of Algal Growth after 96h of exposure to copper delivered as conventional copper sulfate vs EarthTec

The copper dose required to achieve a given % inhibition of algae is much lower if applied as EarthTec than if applied as copper sulfate

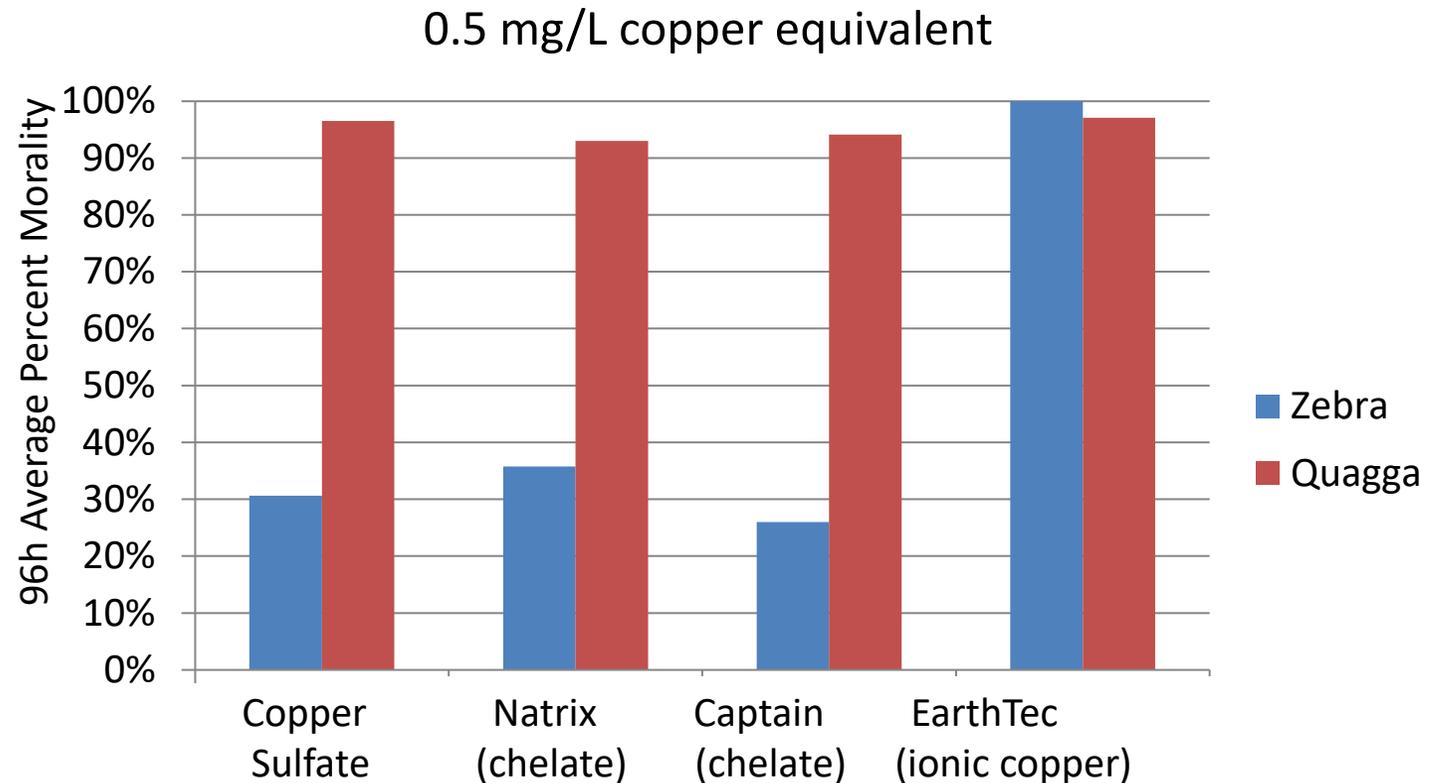

# Copper Sulfate vs Chelated and Ionic Coppers

Average percent mortality after 96h of exposure to copper-based algaecides at 0.5 mg/L copper equivalent

Even at equivalent doses of active ingredient, EarthTec is more effective than other coppers.

And we now know that much lower doses than these are effective against mussels.

# Product Comparison

Copper Sulfate vs EarthTec

## Norwalk, OH (2012 vs 2013)

Copper sulfate 2012	Ionic Copper 2013	
10	8	treatments per year
500	60	lbs or gallons per treatment
	10	lbs, weight per gal of EarthTec
5,000	4,800	lbs per year
25%	5%	fraction that is elemental copper
<b>1,250</b>	<b>240</b>	<b>elemental copper applied, lbs</b>
100%	19.20%	total copper applied, %

When Norwalk switched from copper sulfate to EarthTec, they had fewer total applications per year and applied <20% of the elemental copper used in previous years, even though their treatment season spanned a longer portion of the year.

# Main message

**There is a new generation of liquid copper products that**

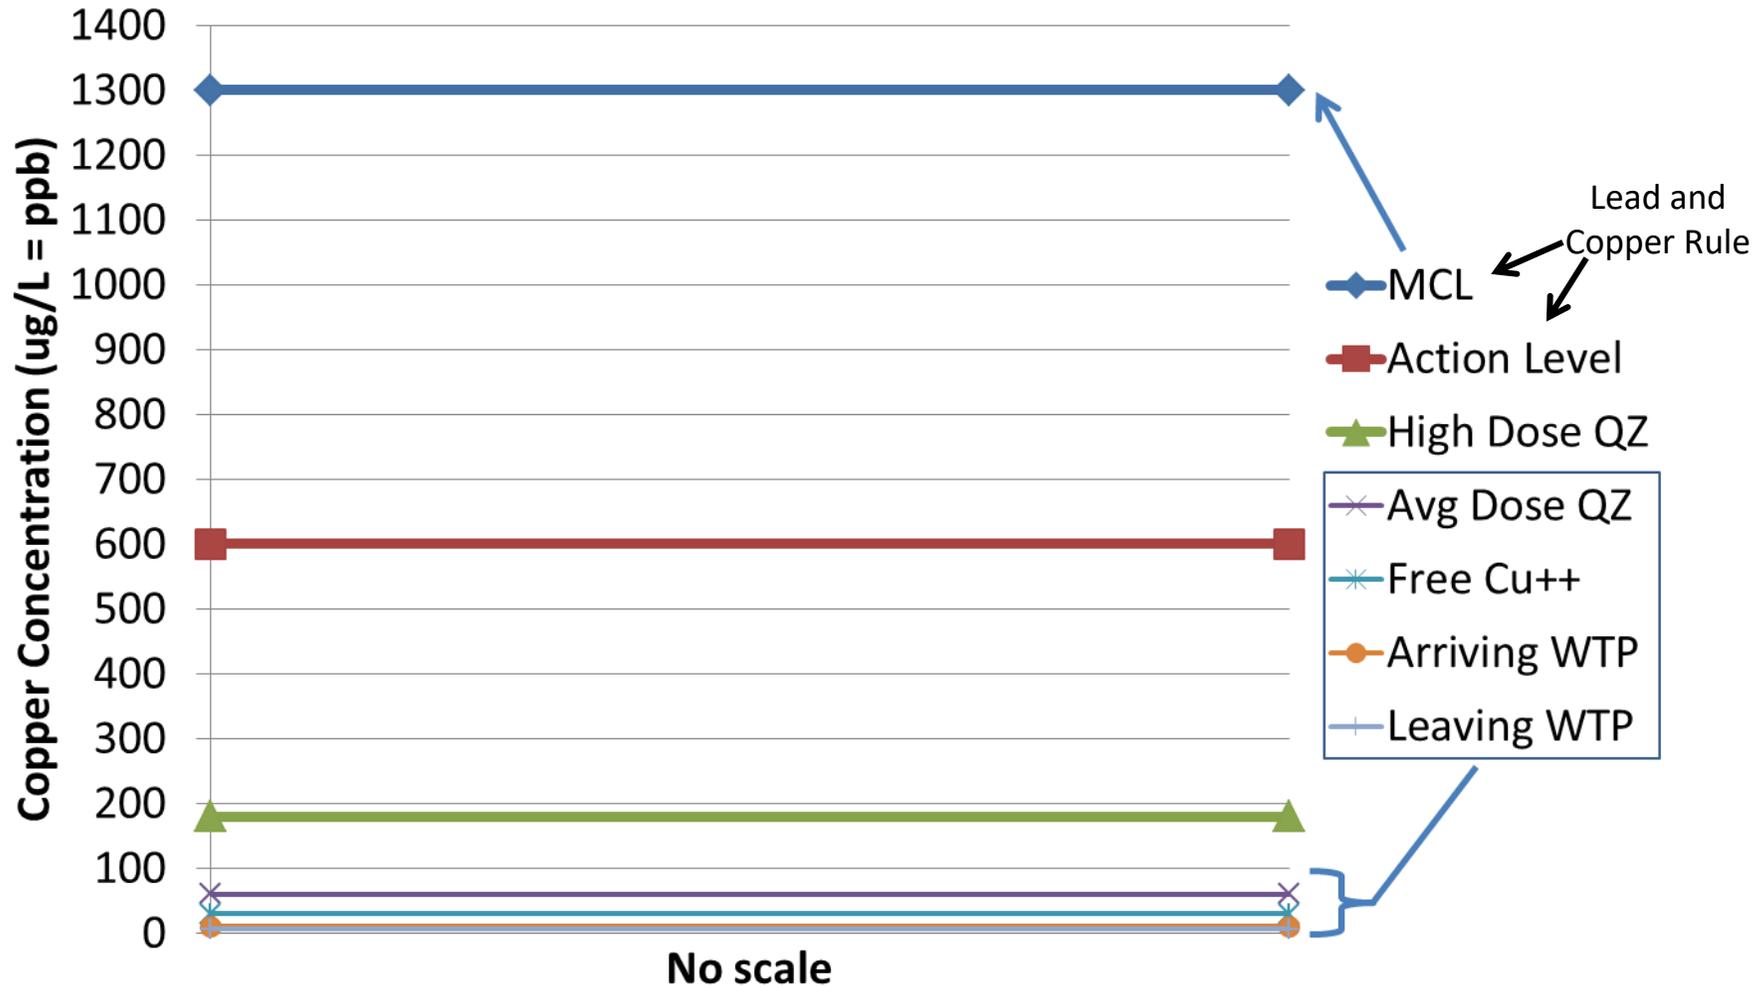

- deliver copper entirely as cupric ions,  $\text{Cu}^{++}$
- are highly bioavailable,
- are effective at low doses

## Recommended Dose of EarthTec according to Severity of Cyanobacterial Bloom

<b>Algal bloom conditions</b>	<b>µL/L (as EarthTec)</b>	<b>ppm, as copper</b>	<b>ppb, as copper</b>
<b>Preventative dose</b>	0.5	0.030	30
<b>Mild bloom</b>	1	0.060	60
<b>Full bloom</b>	2	0.120	120
<b>Severe bloom</b>	3	0.180	180

EPA max for copper algaecides is 1 mg/L as copper = 1,000 ppb as copper  
(Granulated copper requires 5x to 15x more active ingredient)

# Copper Concentrations in Drinking Water

The copper residual concentration arriving at a WTP is approximately 1/100<sup>th</sup> of the Lead and Copper Rule standard

# Harmful Algal Blooms (HABs) in the News

Centers for Disease Control and Prevention  
CDC 24/7: Saving Lives, Protecting People™

CDC launches updated Harmful Algal Blooms (HABs) website and the One Health Harmful Algal Bloom System OHHABS as hot weather brings extensive HAB events

## Herriman city officials say Blackridge Reservoir again safe for swimming

By Tori Jorgensen  
For the Deseret News  
Published: Wednesday, Sept. 2 2015 5:45 p.m. MDT

Print | Font [+][-] | [Leave a comment »](#)

[View 12 photos »](#)

The Blackridge Reservoir was closed due to an algae bloom in Herriman on Friday, Aug. 7, 2015.

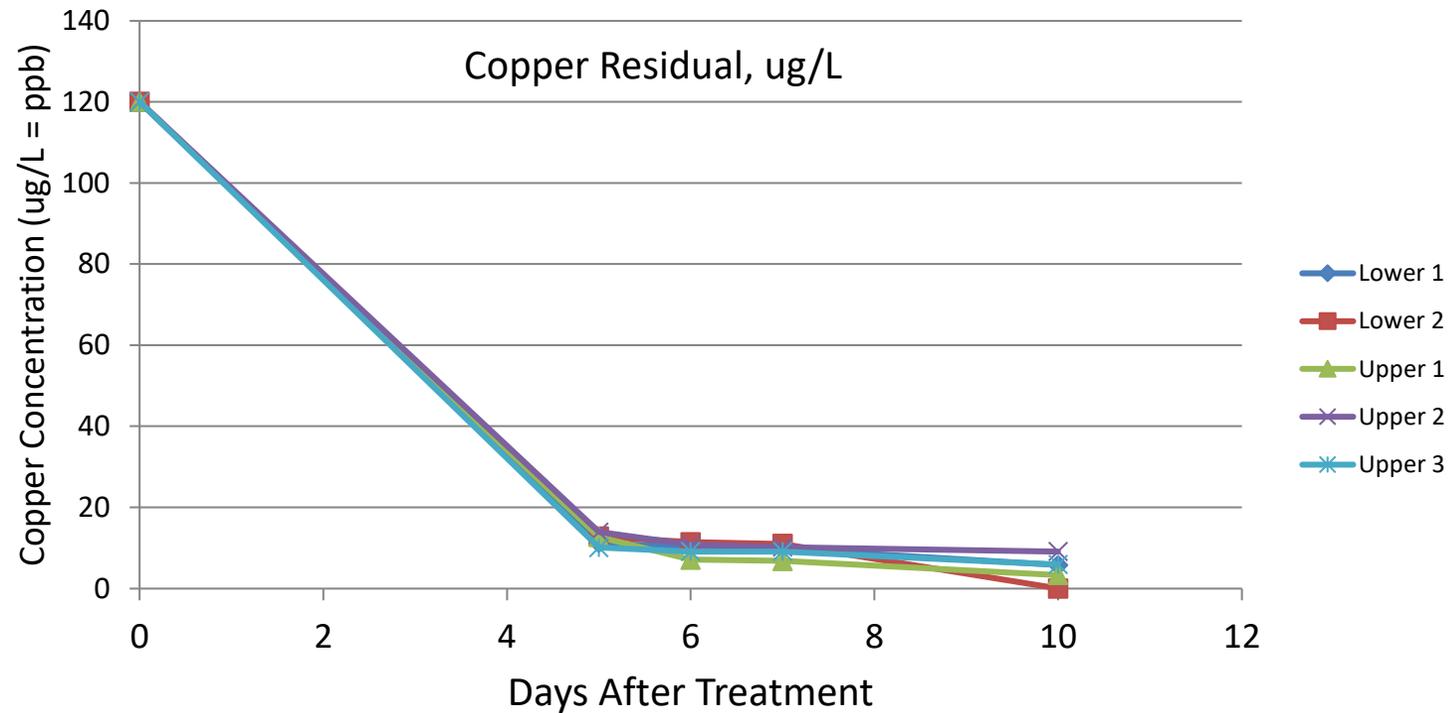

Stacie Scott, Deseret News

### Summary

Herriman city officials say Blackridge Reservoir is now safe

**HERRIMAN** — City officials say Blackridge Reservoir is now safe for swimming after chemical algaecide treatment decreased contamination levels.

## Copper residual concentration following treatment of algal bloom July 1, 2016 using EarthTec

Copper residuals do not persist

Figure: Residual free copper in the days following algaecide application by boat of 2 gallons EarthTec per surface acre on two different reservoirs of the Norwalk, Ohio WTP, Upper and Lower. Samples taken at 6" depth at different locations around the reservoir shoreline.

Study using EarthTec against a severe cyanobacterial bloom in Florida  
Fred Singleton, Ph.D.

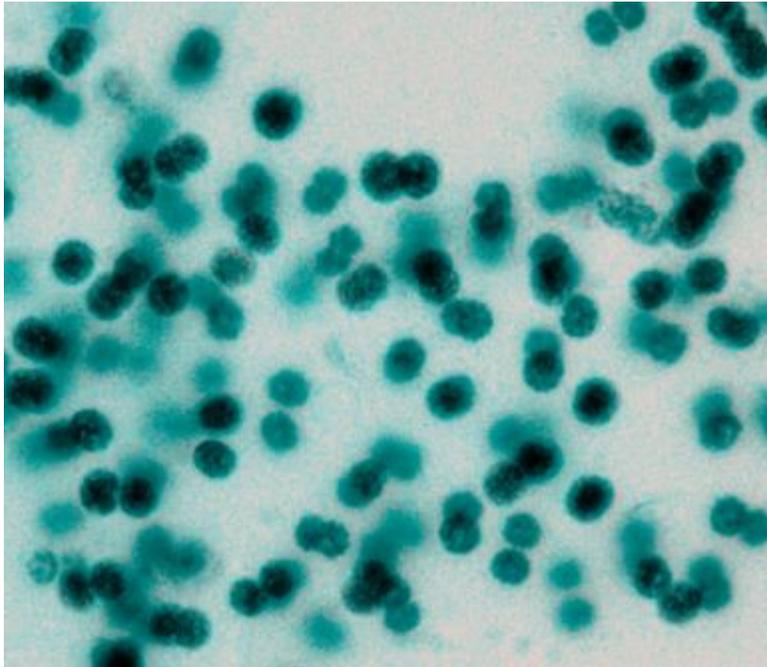

Location: Central Marine Stuart, Stuart, FL (July 2016)  
Severity: Significant – Biomass mat was ca. 8" thick. Primarily Microcystis.

Understanding a model-of-action model begins with an understanding of the morphology of the target organisms

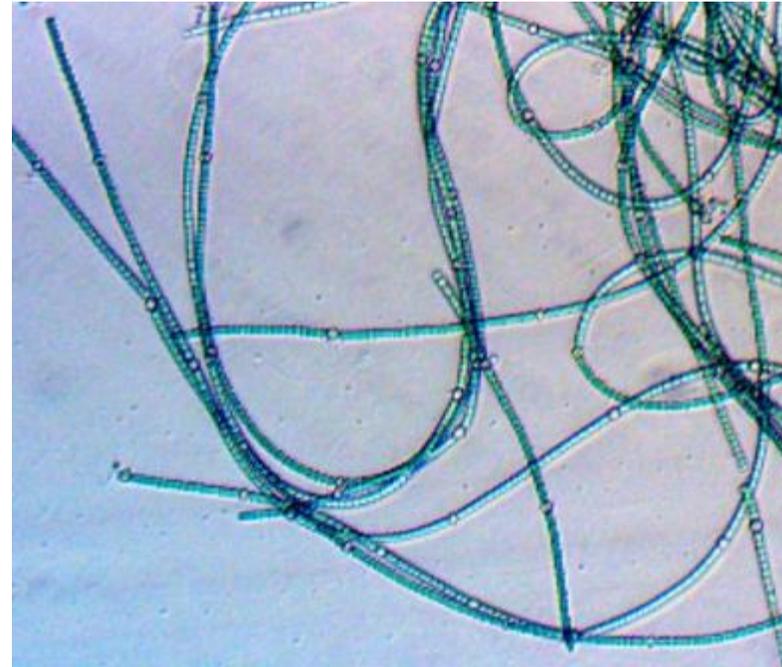

**Non-Filamentous**

*Microcystis* sp. (400X Mag.)

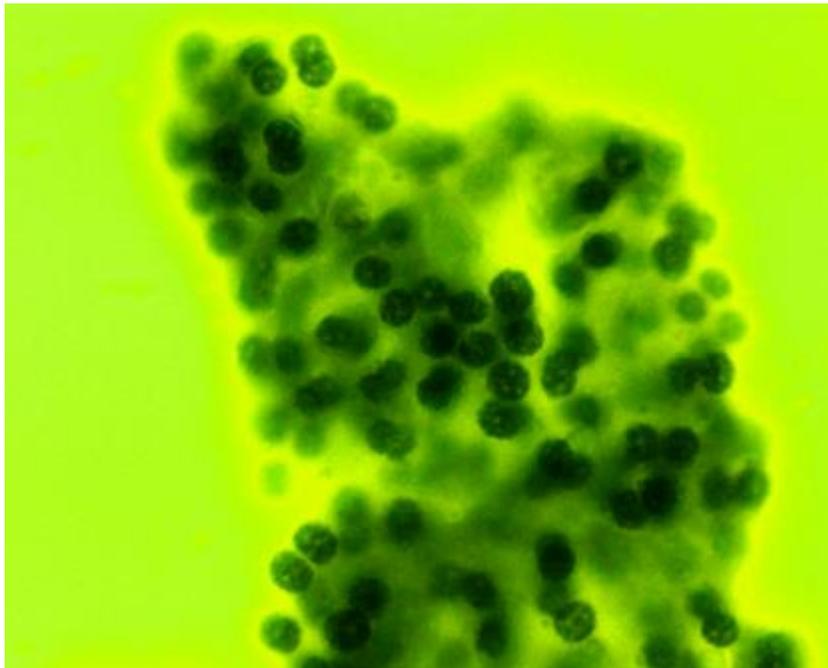

**Filamentous**

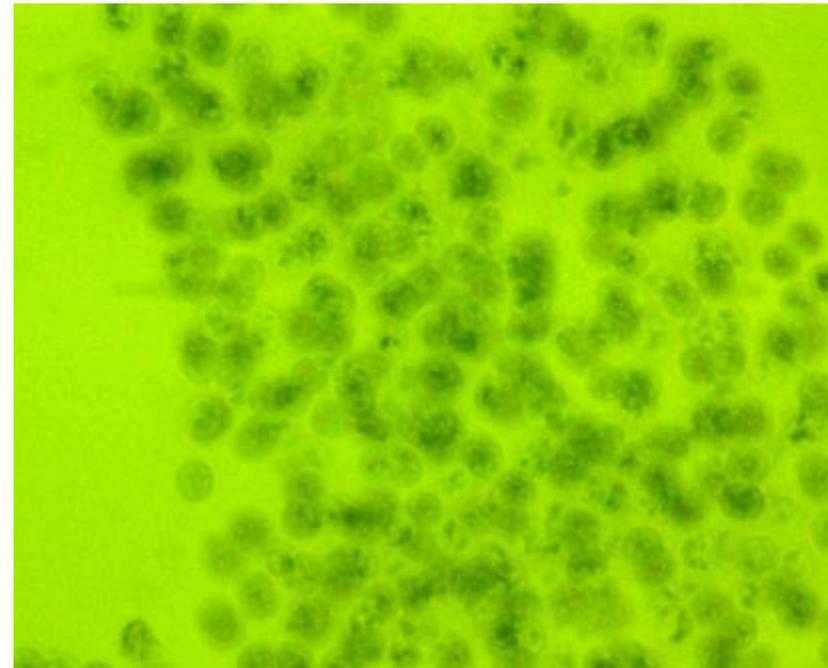

*Anabaena* sp. (125X Mag.)

*Microcystis* sp. + 120 ppb Cu (as EarthTec), T = 0

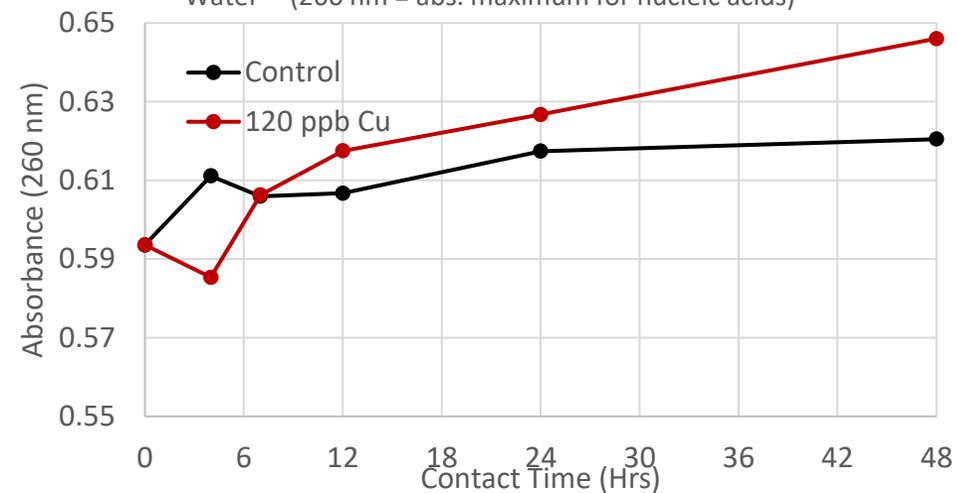

*Microcystis* sp. + 120 ppb Cu (as EarthTec), T = 24 hr

### OBSERVATIONS

- Mass of cell clusters greatly reduced
- Ionic copper (as EarthTec) does NOT cause immediate or extensive lysis of *Microcystis* cells
- Ionic copper treatment results in cells slowly leaking their cytoplasmic materials into the surrounding water
- Ionic copper does NOT inhibit non-target microorganisms that consume leaked cytoplasmic materials

Membrane Leakage of Organics from *Microcystis* sp. in Marina Water -- (260 nm = abs. maximum for nucleic acids)

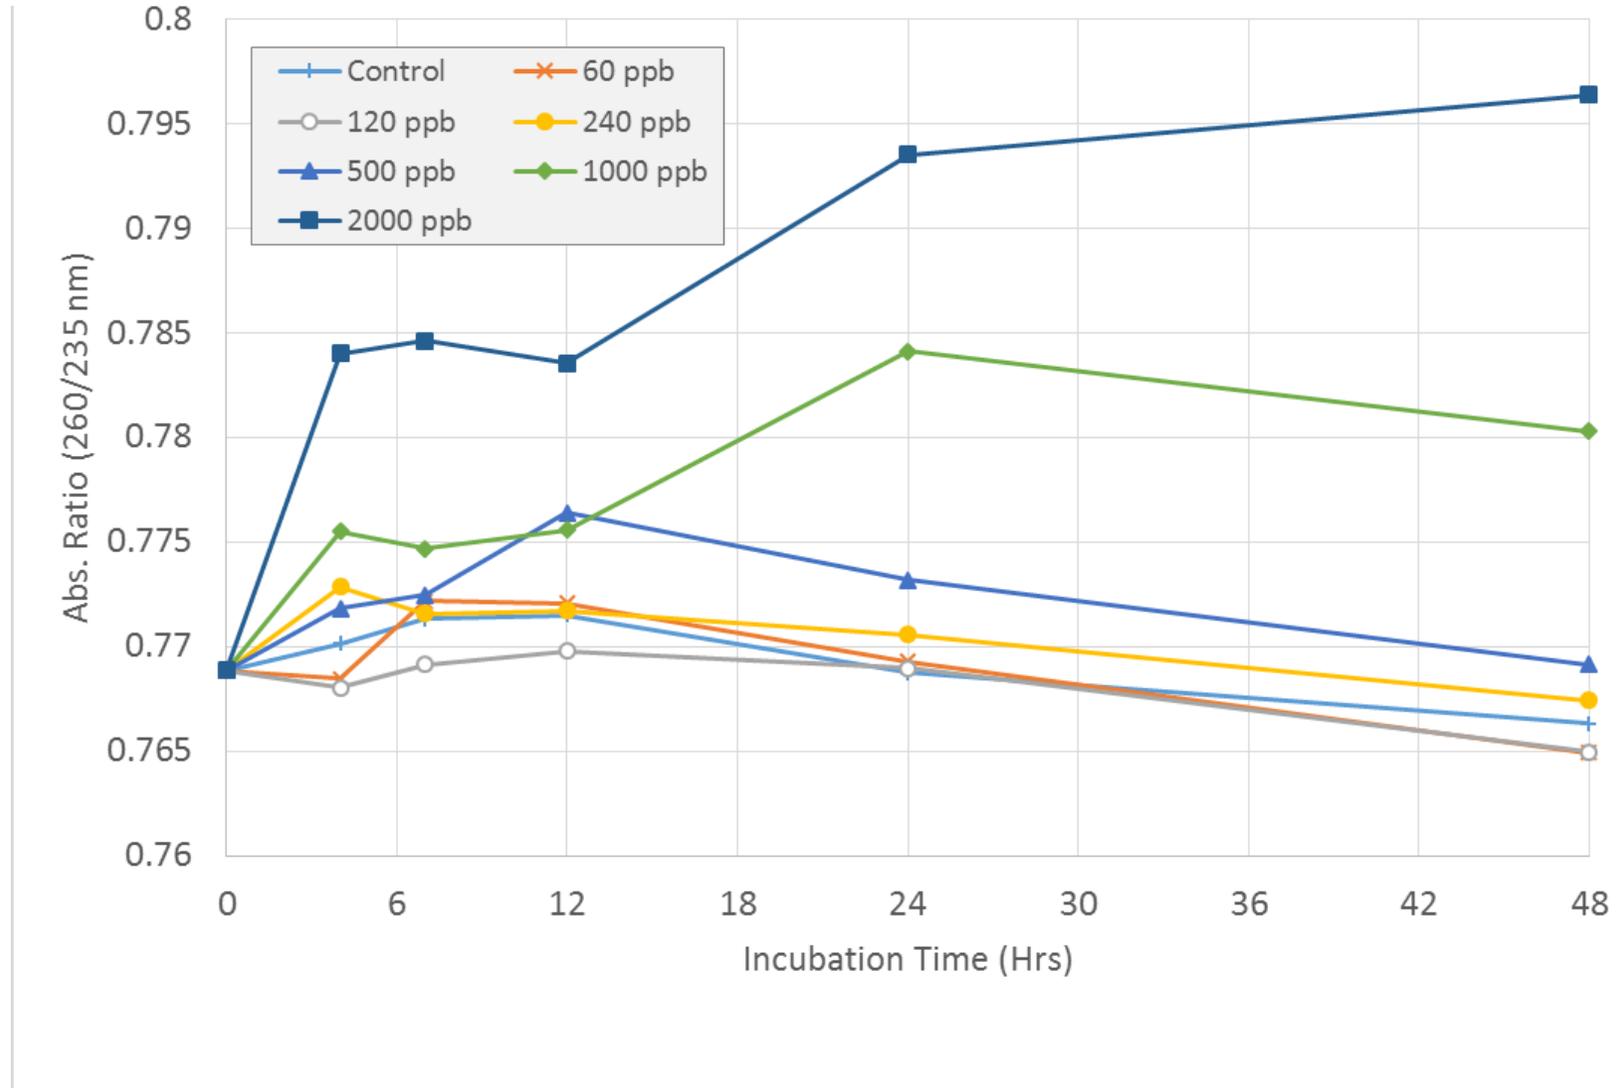

Source: Fred Singleton, Ph.D., Earth Science Labs, Inc.

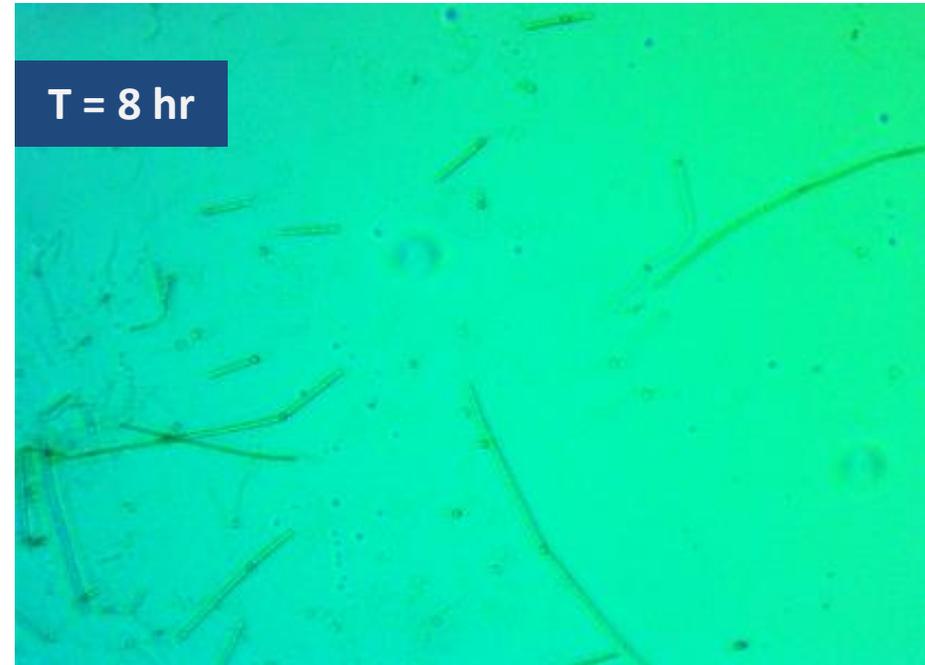

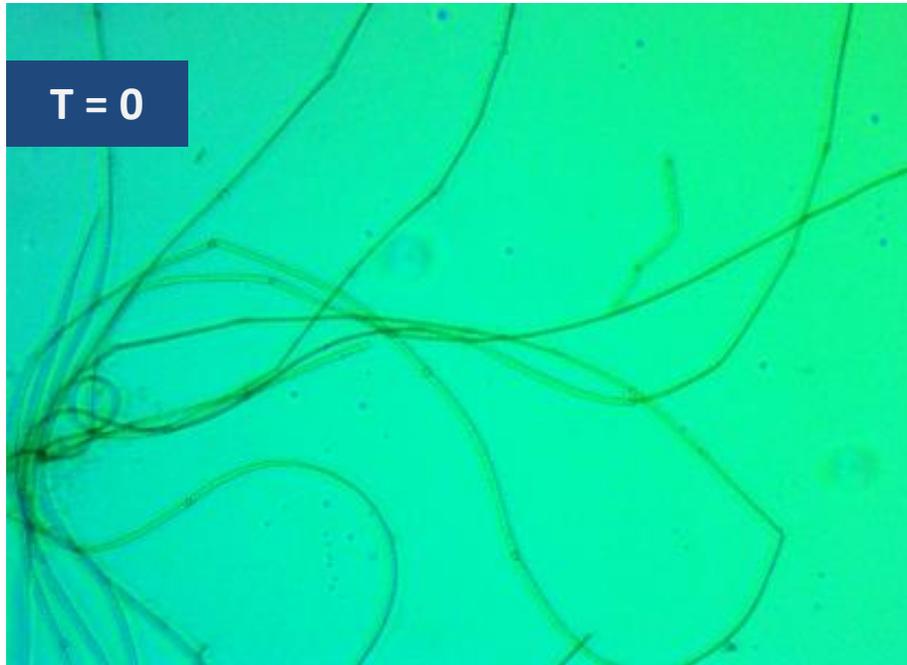

Change in relative concentrations of dissolved organics in marina water (collected during a heavy *Microcystis* bloom) treated with various concentrations of Cu (as EarthTec).

Wavelengths = 260 and 235 nm as indices of nucleic acids and carbohydrates, respectively.

**Significant changes occur only at doses of 500 ppb and higher.**

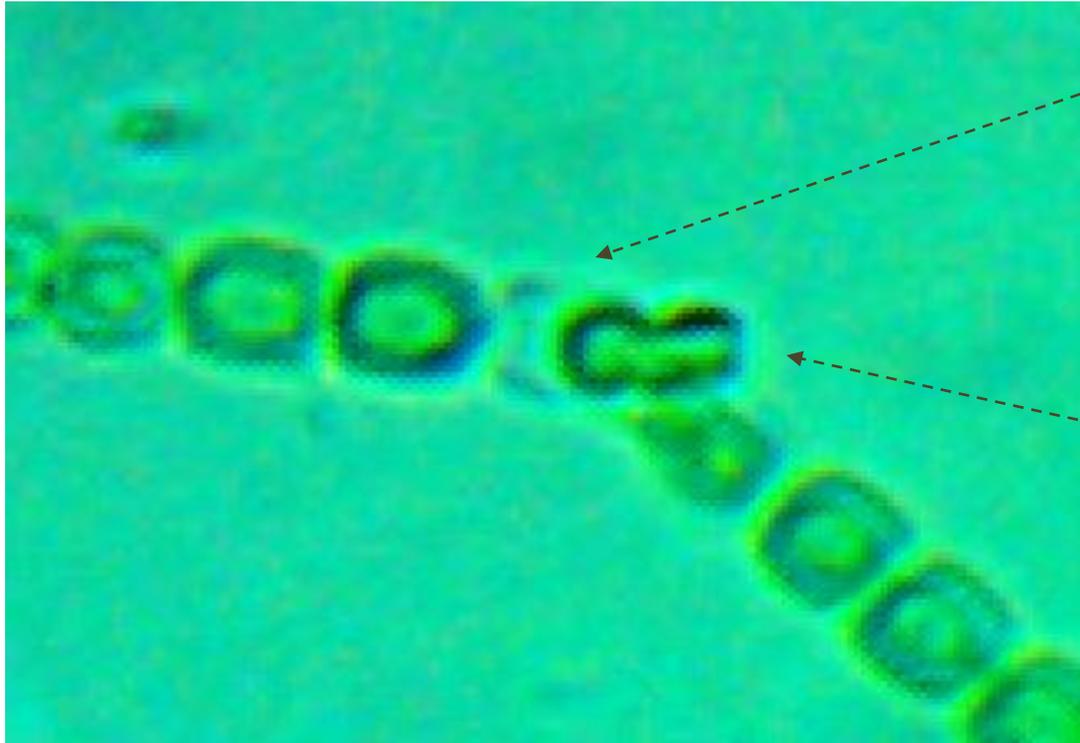

## *Anabaena*, 120 ppb Cu (as EarthTec)

- Release of cells from filaments during 8 hr contact
- Many of the photosynthetic cells remained structurally intact
- Heterocysts remained structurally intact

## *Filamentous Anabaena* treated with 120 ppb Cu (as EarthTec)

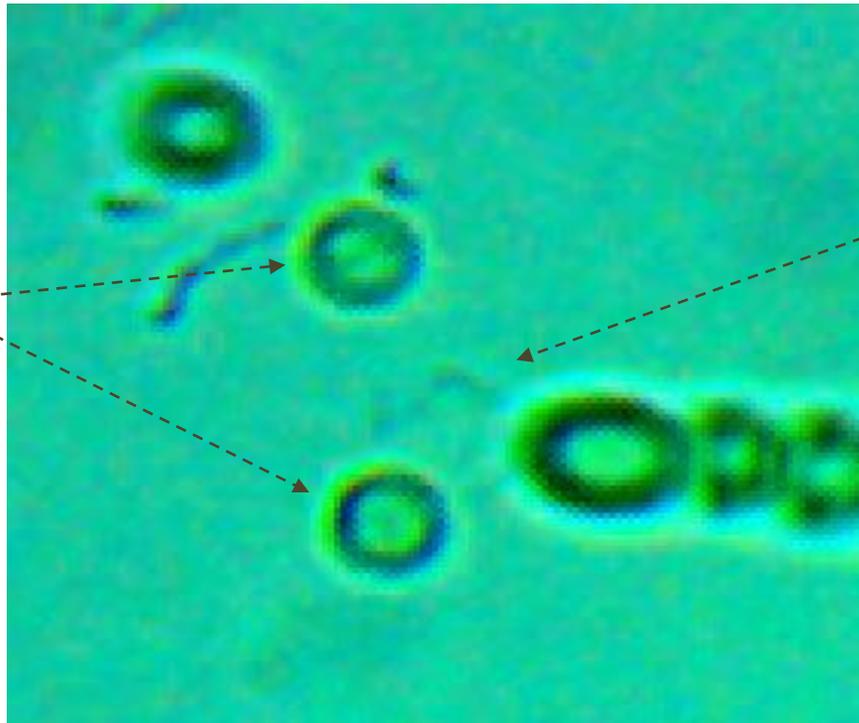

Remnant of  
sheath/gelatinous  
layer

Cell being released  
from filament –

Cell is intact  
(no lysis)

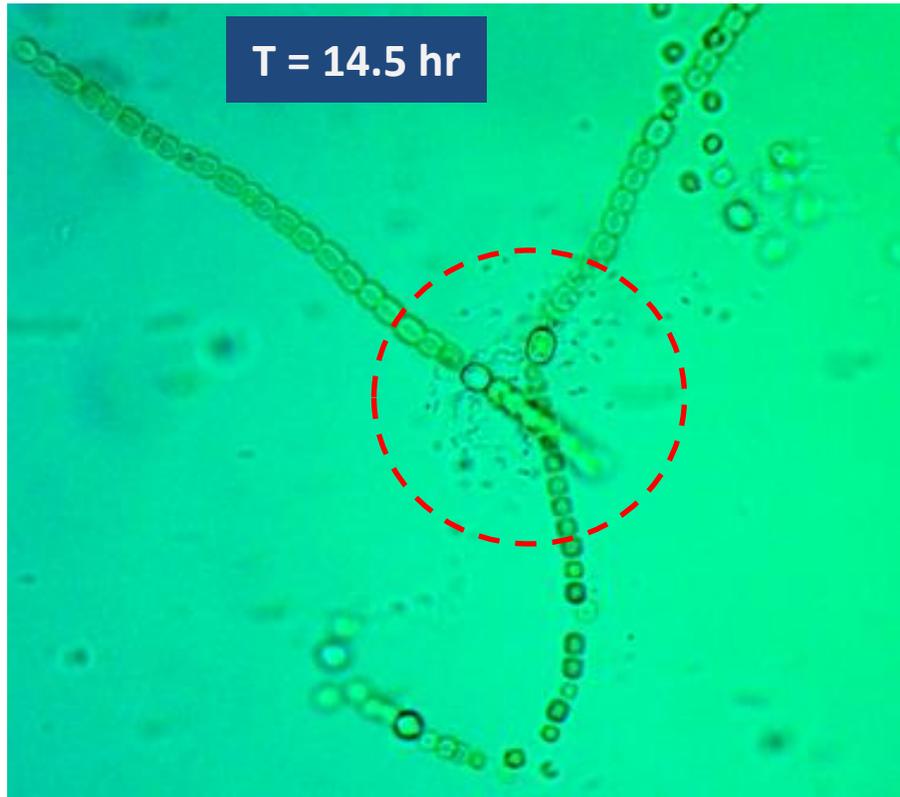

*Anabaena*, 120 ppb Cu

Cells immediately  
after separation  
from filament

Remnant of  
sheath/gelatinous  
layer

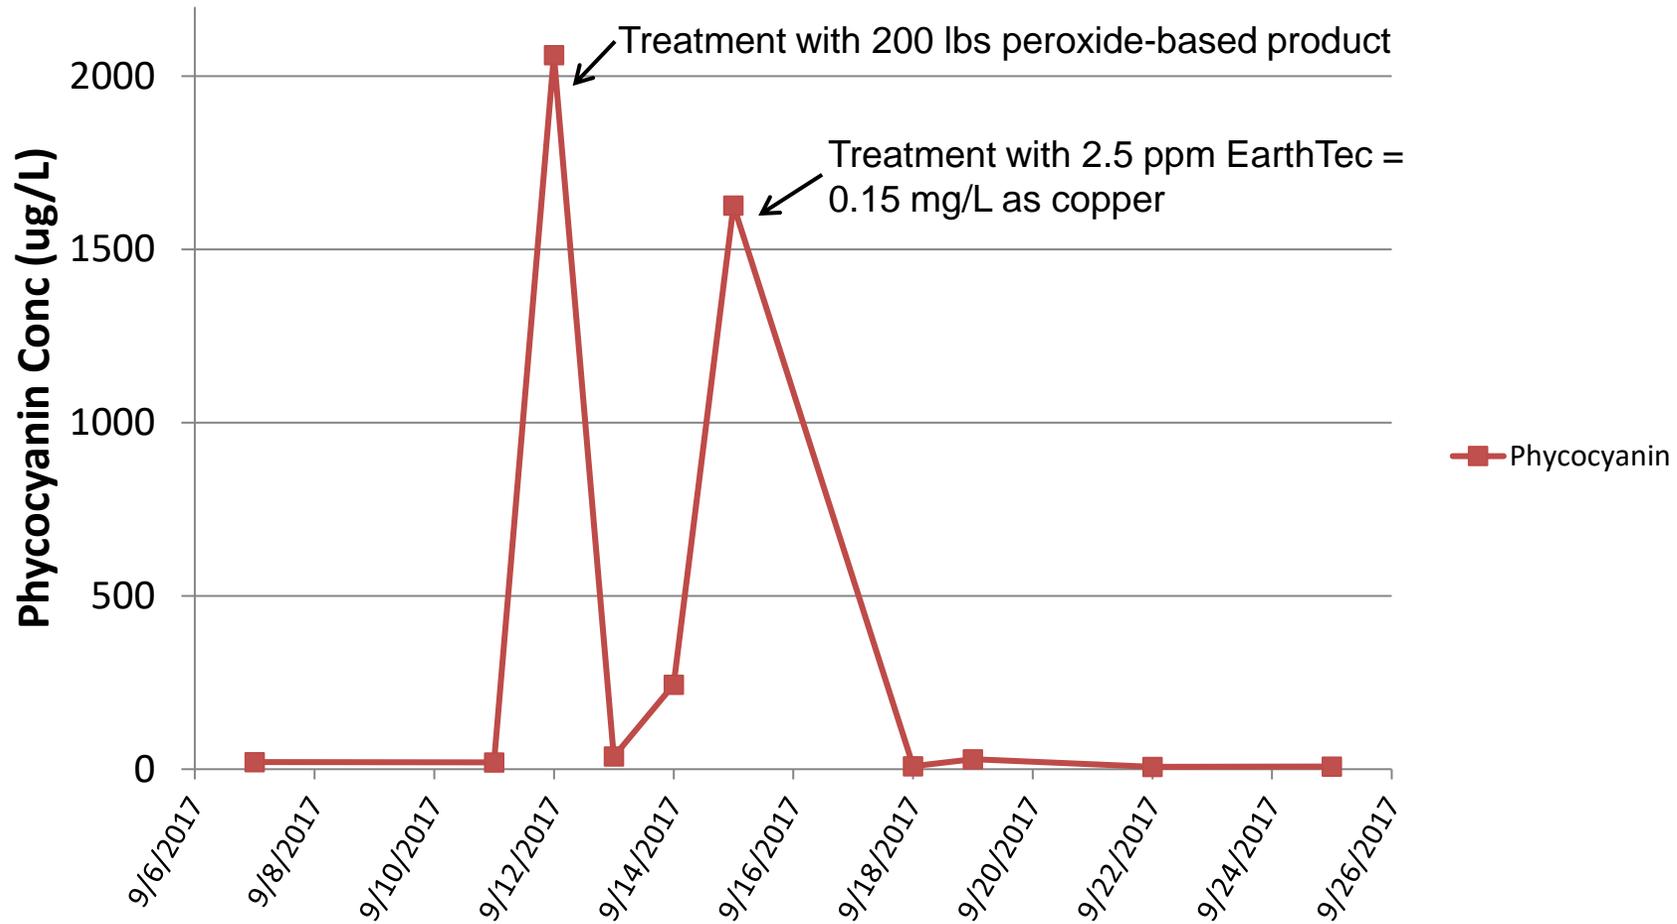

## *Anabaena*, 120 ppb Cu, T = 14.5 hr

- Heterotrophic bacteria feeding on materials released from cyanobacterial cells –
- Illustrates non-target organisms are not affected by low doses of ionic copper
- Most of the photosynthetic cells remained structurally intact
- Heterocysts remained structurally intact

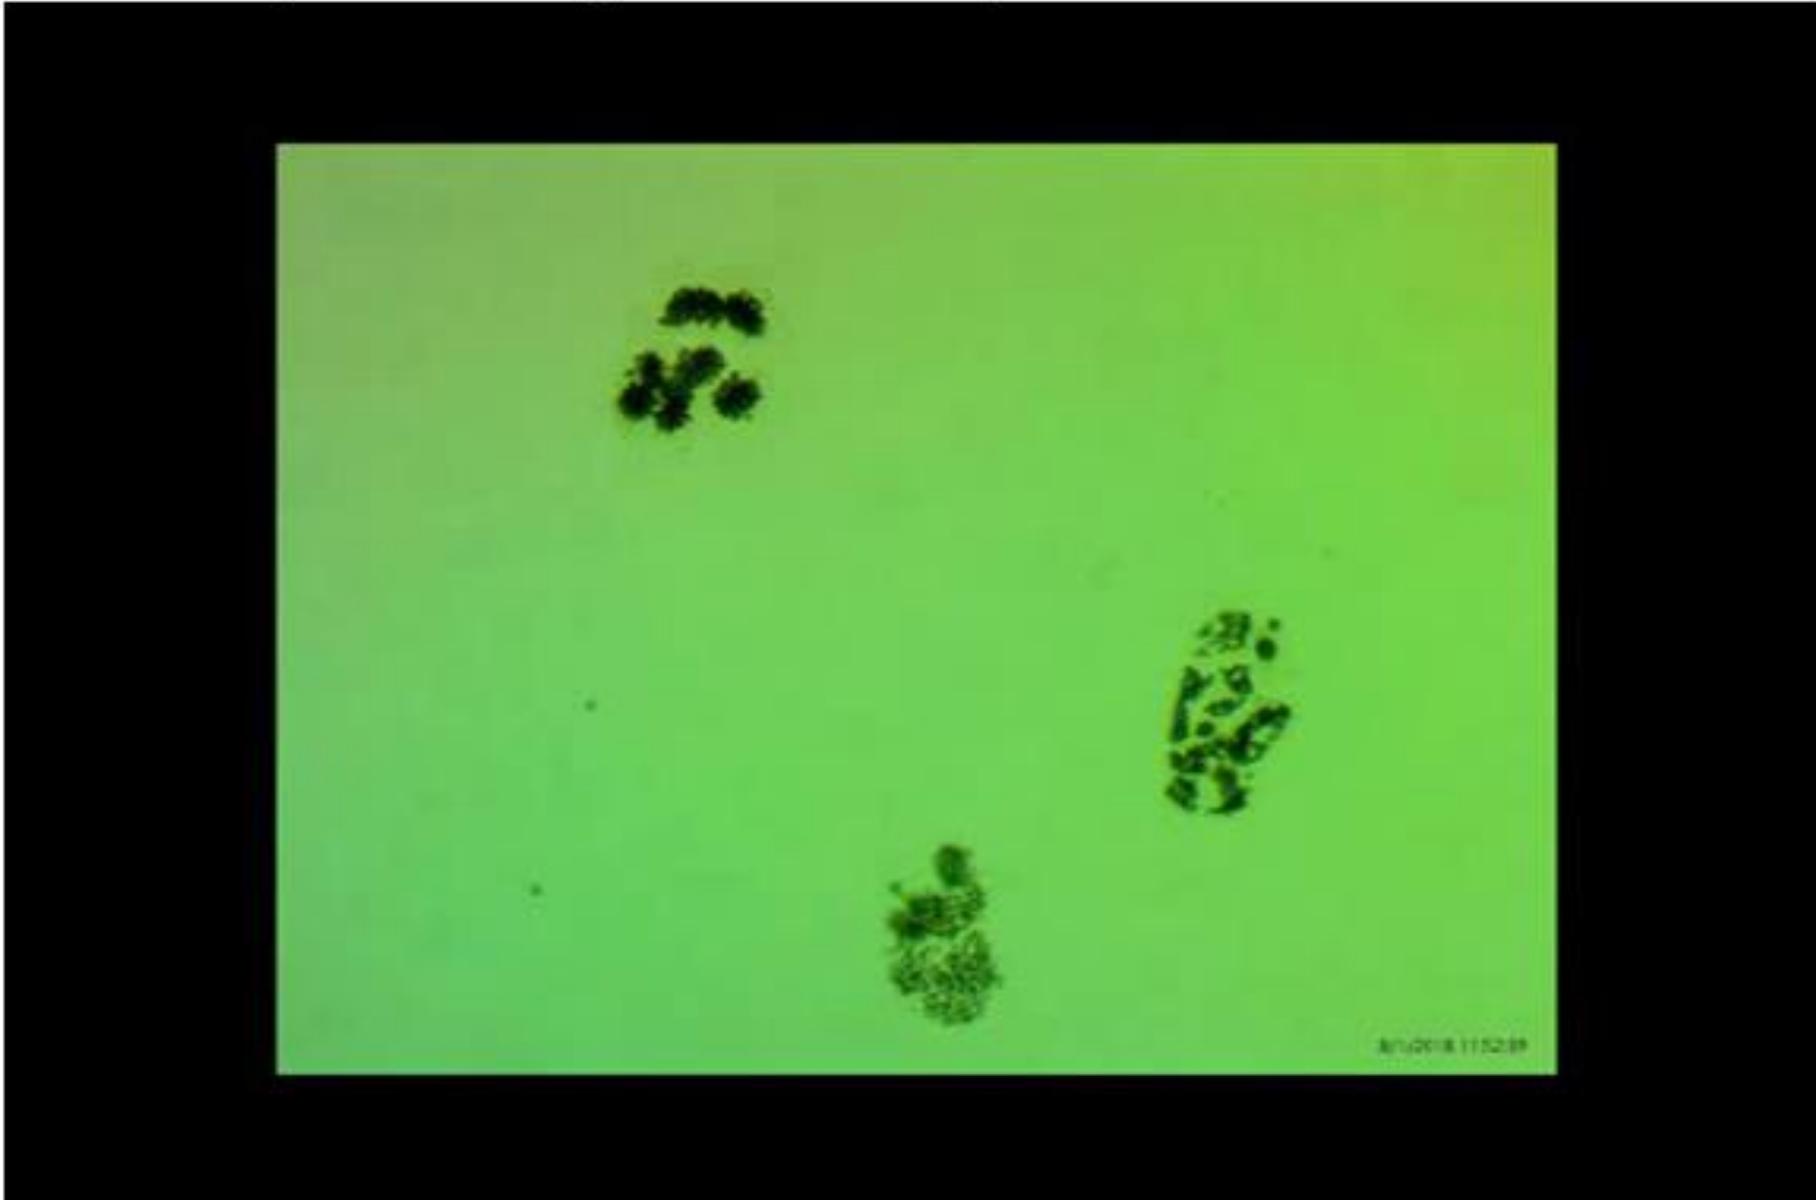

# Ohio WTP – Severe HAB in Source Water Reservoir

## Cyanobacterial Control with Ionic copper - severe bloom

Effects of peroxide-based algaecides are often short-lived

Video of liquid ionic copper added to cyanobacterial culture, T = 0 to 46 hrs

Microcystis treated with ionic copper don't lyse, they decompose over a period of 2-3 days

# Risk-based Analysis of Cyanotoxins

## Cyanotoxins:

- No good level to have
- EPA candidate contaminate list drinking water
- WHO guidelines in recreational water
- WHO possible carcinogen list
- Accumulates through time
- ALS, PDS, Alzheimer's link
- Has caused deaths of cows, elk, dogs, birds, fish, people, etc.

## Copper:

- Essential nutrient
  - Hemocyanin
  - Suggested Daily Intake (1 mg/day)
- High affinity to algae
- 26th element in earth's crust
- Does not bio-accumulate
- Transfers to less available sediment forms through time
- No swimming/ drinking/irrigation restrictions on label

## **We're still learning about cyanotoxins....**

- Toxin production is intermittent
- Instances where toxicity is present but no known toxin isolated yet
- New toxins still being discovered

# Control of Invasive Quagga and Zebra Mussels using

 **EARTHTEC**<sup>®</sup> QZ

3.5" = 9 cm

## Cost Optimization

### Considerations and Strategies: 3-for-1

**What is a 3-for-1? Multiple benefits from one chemical**  
e.g., ancillary benefits of pre-treating with ionic copper algaecide

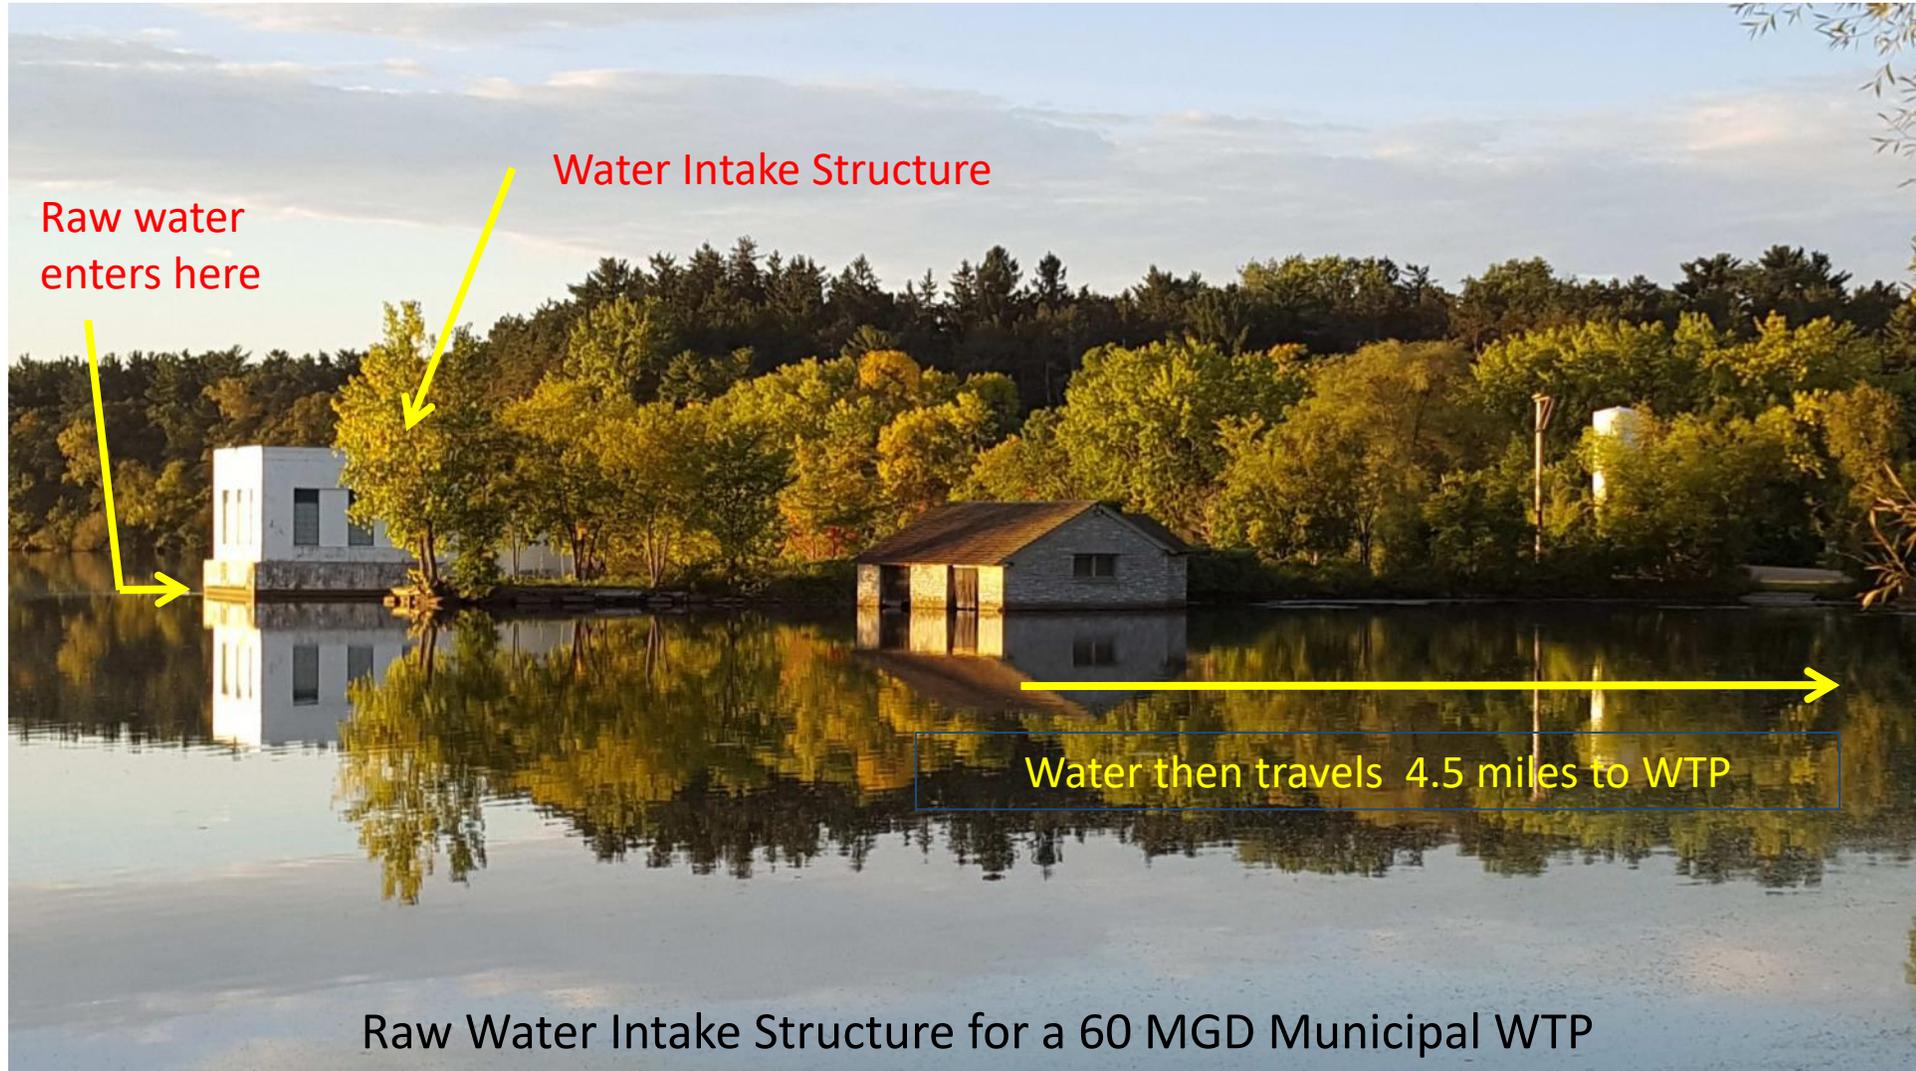

#### Pre-Treatment Objectives

- Algae Control (in water and on basin walls)
- Control of zebra mussels and other biofouling 
- Reduce TOC
- Reduce DBPs
- Reduce Taste and Odor (e.g., geosmin)
- Reduce Carbon and Ozone Consumption
- Improve Coagulation Performance
- Aid in disinfection without DBPs
- Extend Filters Runs
- Apply at Pipeline Intake to Extend Contact Time

# Priority Sites for Mussel Control

- Flowing Waters (pipelines, aqueducts)
- Open Waters (lakes)
  - Rapid Response
  - Full Lake
  - Fish Hatcheries

**Zebra mussels have historically infested the intake structure of a major municipal WTP in the Midwest  
2015-16**

This is what the clean screens should look like

### COST-BENEFIT ASSESSMENT

- **Before ionic copper:**
  - PAC at 12ppm,  $\$0.90/\text{lb} \times 5,000 \text{ lbs/d} = \$4,500/\text{d}$
  - Copper sulfate at  $\$1.50/\text{lb} \times 100 \text{ lbs/d} = \$150/\text{d}$
  - Total treatment for 50 MGD =  **$\$4,650/\text{d}$**
- **With ionic copper:**
  - PAC at <3ppm as needed,  $\$0.90/\text{lb} \times 1,250 \text{ lbs/d} = \$1,125/\text{d}$
  - No copper sulfate
  - EarthTec =  $\$750/\text{d}$
  - Total for 50 MGD =  **$\$1,875/\text{d}$**
- **Ionic copper saving them  $\$2,775/\text{d}$  during season**

**A 2-3 ppm reduction in consumption of PAC (Powdered Activated Carbon) offsets the cost of 1 ppm as EarthTec**

## Treatment Example

Estimates based on using EarthTec year-round.

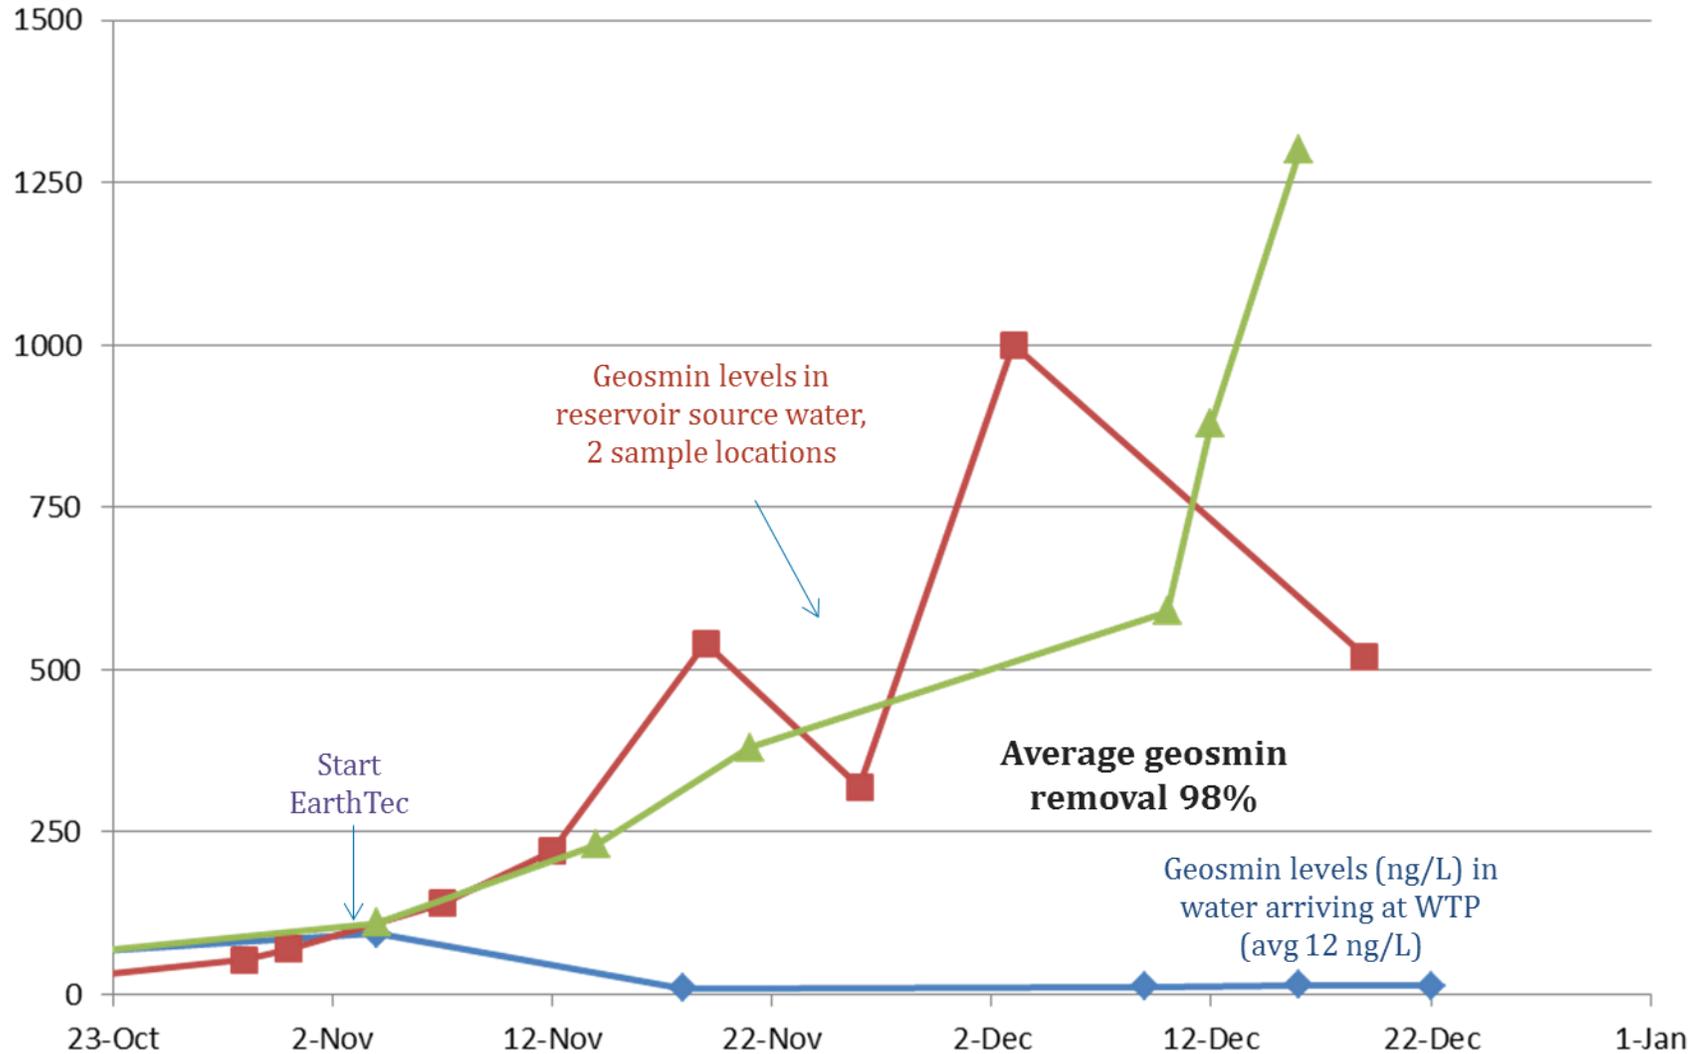

## Burlington, Vermont

Burlington was experiencing high concentrations of Disinfection By-Products. The year they started using EarthTec for mussel control yielded their lowest DBP values on record.

# Geosmin Reduction

Geosmin removal from source water during fall of 2013.

Data from City of Tulsa, Oklahoma, Dec 2013

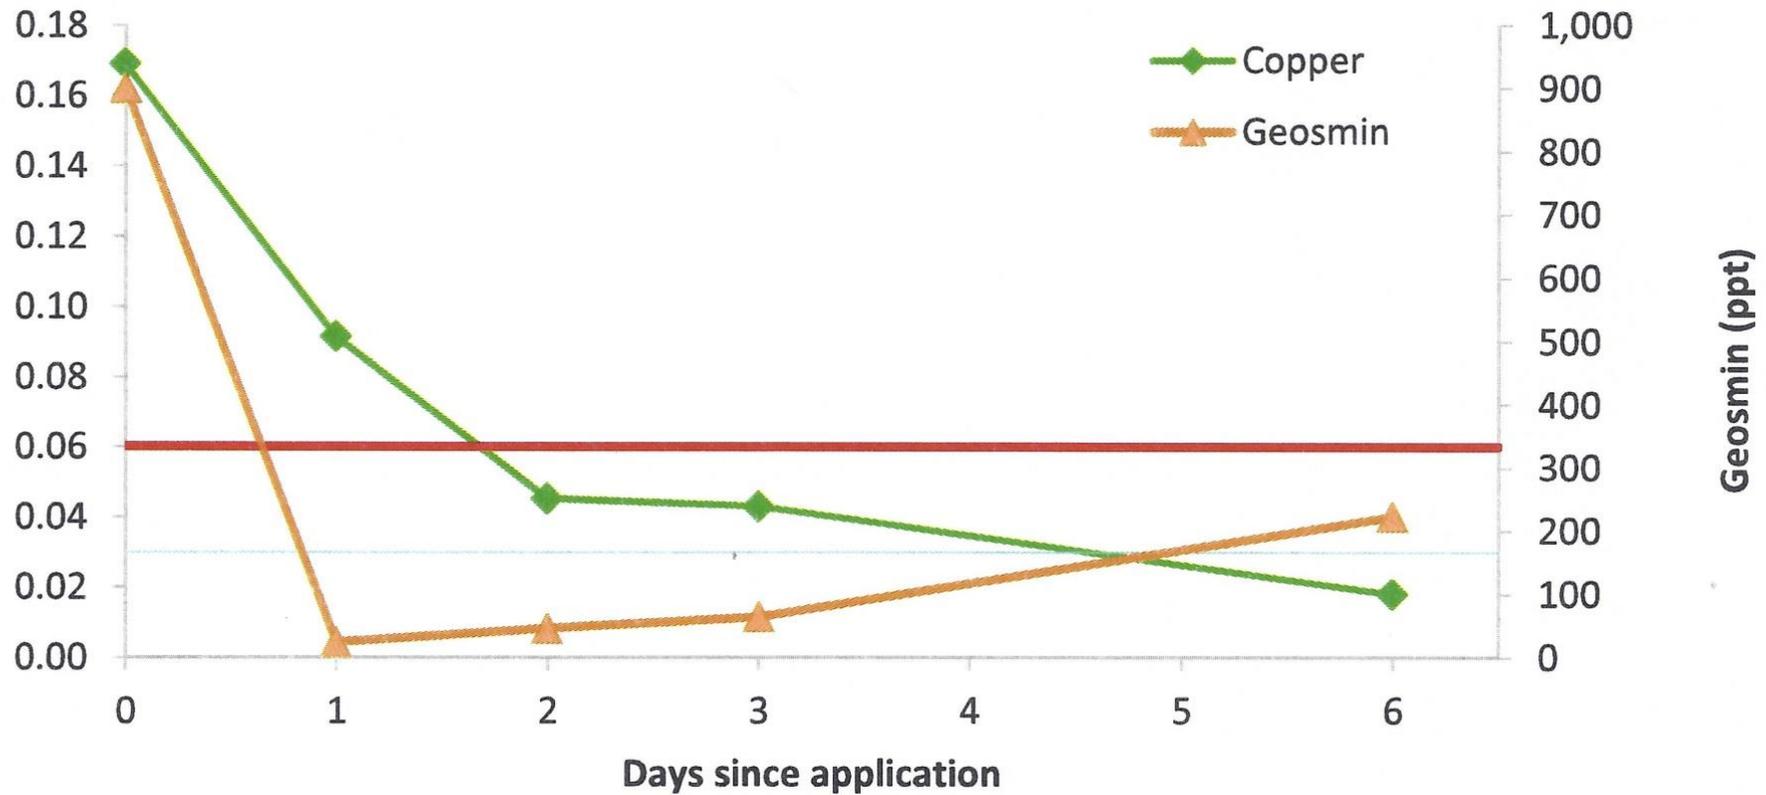

## Treatment Example Geosmin Reduction

# Tampa

- Source water: Slow-moving river
- Geosmin at time of dose 900 ng/L
- Applied 1 ppm EarthTec at water surface
- Geosmin at 24 h <30 ng/L

# Geosmin Reduction at Tampa using EarthTec

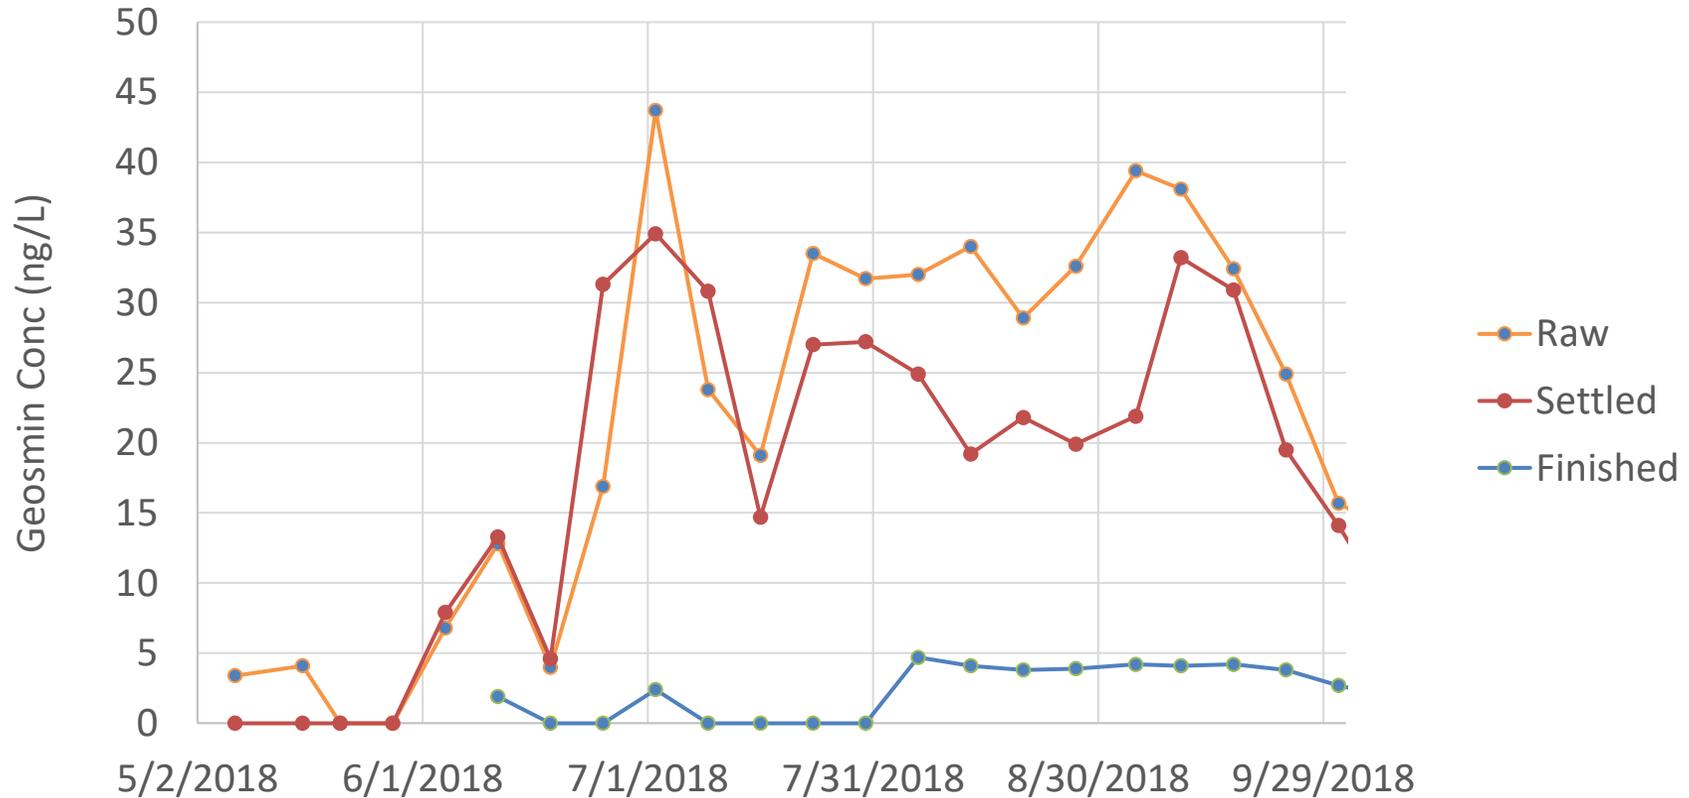

EarthTec quickly reduced geosmin concentration in municipal source water by >95%

Data from City of Tampa WTP, Florida, 2015

# Geosmin Reduction, EarthTec fed at intake

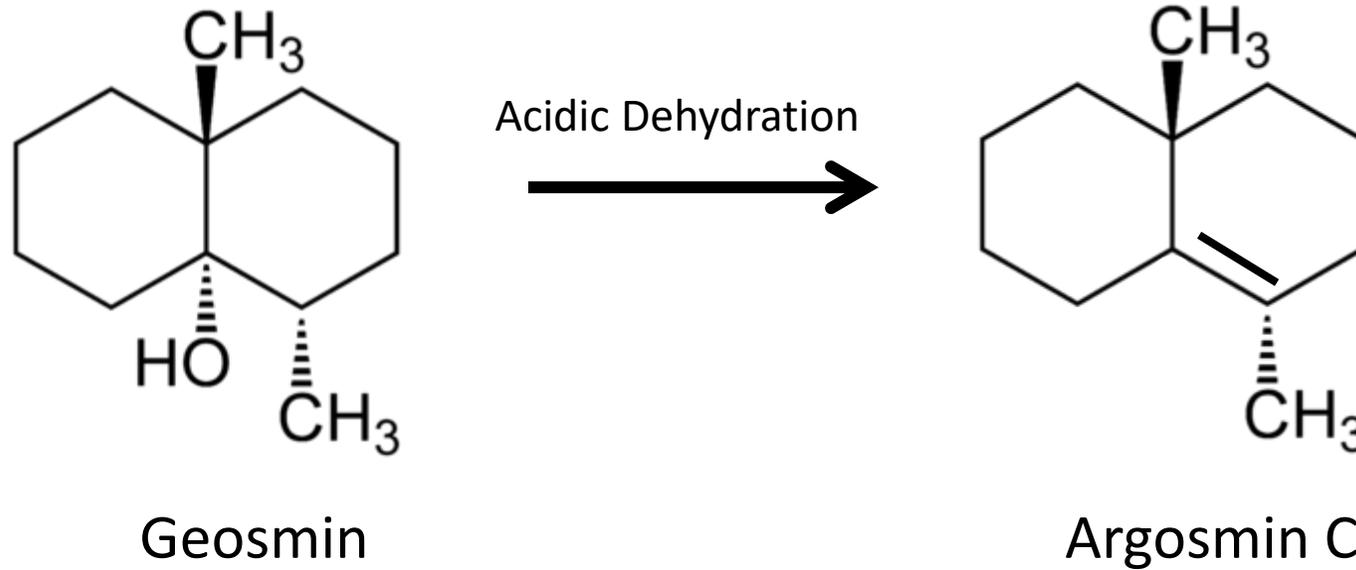

Geosmin during Pre-Treatment with EarthTec ionic copper  
Bollman WTP, Contra Costa, 2018

First season in 15 years that CCWD received zero customer complaints

Data from Contra Costa Water District, California, 2018

# Proposed Mechanism for Destruction of Geosmin

Geosmin  
trans-1,10-dimethyl-trans-9-decalol  
182 g/mol.  
Boiling point: 270 °C

Argosmin C  
1, 10-dimethyl-l(9)-octalin  
182 g/mol.  
Boiling point: 230 °C

# Ionic Copper Chemistry (as EarthTec)

## EarthTec is

- **Liquid** formulation containing **5% copper** by volume
- Made from copper sulfate + proprietary carrier molecule (ET-3000)
- Unique features:
  - Copper is **99.99% cupric ion form (Cu<sup>++</sup>)** so it is **readily bioavailable**
  - Durational Control- prevents and controls for 14-30 days
  - **Rapid-dispersing properties**, so no need for mixing
  - Low pH- 0.2-0.3
  - Infinitely soluble in water, stays suspended, **will not settle** out
  - Low concentrations yield high performance: **30-120 ppb copper**
    - 1 ppm EarthTec = 60 ppb copper
    - Most applications require 1-2 gallons/mgd depending on water quality
    - No immediate cell lysing

# Chemical Compatibility

- Poly tanks and tubing
- Stainless steel also good
- Dose with diaphragm or peristaltic pumps
- Drums, totes, mini-bulk, bulk
- Do not use carbon steel, brass, aluminum

# Summary of Ionic Copper Uses

## EarthTec is a water pretreatment chemical

- Used in WTP reservoirs, intakes and pipelines
- Control algae and blue-green algae (**cyanobacteria/HAB's**)
- Reduce taste and odor compounds, especially **geosmin**
- Reduce Total Organic Carbon (TOC)
- No production of DBPs, **THMs** or **HAA5's**
- Reduce downstream consumption of:
  - **activated carbon, ozone, oxidizer, coagulants, caustic**
- Increase filter run times
- Reduce **biofilm/slime on pipes** (Improves pumping efficiency)
- Eliminate clogging in nozzles/sprinkler heads due to algae
- Control zebra mussels and quagga **mussels: EarthTec QZ**
- Reduce a wide range of bacteria (non-public health)
- Wastewater filter/reuse
