  - General Maintenance
  - Location of Assets
  - Emergency Use
    - Leaks, Breaks, Fires, Illegal Access containment

In May 2007, The department of homeland security and EPA jointly published the "Critical Infrastructure and Key Resources Sector-Specific Plan as input to the National Infrastructure Protection Plan"

Which specifically states to:
Identify Assets, Systems, Networks, and
Functions

In other words,

"know where your assets are!"

- \*Working Knowledge of Distribution System
- \*Asset Management
  - General Maintenance
  - Location of Assets
  - Emergency Use
    - Leaks, Breaks, Fires, Illegal Access containment
- \*Identify problems
  - Closed Valves
  - Non-working valves
  - Replace / Repair
- **\*EPA REQUIREMENT**

#### Valve Exercising Program Guidance

Division of Drinking and Ground Waters

Per AWWA G200-15 Distribution Systems Operation and Management, section 4,2,5, a valve exercising program is to follow AWWA Manual M44 and the manufacturer's recommended procedure and include at least the following elements:

- 1) A goal for the number of transmission valves to be exercised annually based on the percentage of the total valves in the system.
- A goal for the number of distribution valves to be exercised annually.
- 3) A goal that 100% of the valves are tested within a certain time frame (recommend 1x/5 years).
- Measures to verify that the goals are met and written procedures for action if the goals are not attained.
- Critical valves in the distribution system shall be identified for exercising on a regular basis. Potential water quality and isolation concerns shall be recognized. The program shall track the annual results and set goals to reduce the percent of inoperable valves.
- The valve-exercising program may be implemented in conjunction with the systematic flushing program.
- A goal of replacing the inoperable valves identified during the operation and maintenance process shall be established as part of the exercising program.

#### Determining which valves are critical

- · Transmission mains affecting service to large groups of customers
- · Distribution valves necessary to maintain service to critical customers such as: hospitals, dialysis centers, nursing homes, medical facilities, manufacturing facilities, downtown/high density areas, and service connections where loss of flow could impact human health due to catastrophic events (Waste water treatment plant critical processes or loss of cooling water to processes where it is critical)
- Areas prone to main breaks
- Areas of infrastructure approaching the end of its useful life
- · Areas around road or other utility re-construction areas

#### Frequency of exercising

- Critical valves annually
- Non-critical valves:
  - o Rate of deterioration known to occur in the distribution system. Systems should operate a representative sample annually to determine rate of deterioration
  - Consequence of failure or delays in being able to close the valve

### <u>Goals</u>

Per AWWA G200-15 Distribution Systems Operation and Management, section 4.2.5, a valve exercising program is to follow AWWA Manual M44 and the manufacturer's recommended procedure and include at least the following elements:

- \* 1) A goal for the number of transmission valves to be exercised annually based on the percentage of the total valves in the system.
- \* 2) A goal for the number of distribution valves to be exercised annually.
- \* 3) A goal that 100% of the valves are tested within a certain time frame (recommend 1x/5 years).
- \* 4) Measures to verify that the goals are met and written procedures for action if the goals are not attained.
- \* 5) Critical valves in the distribution system shall be identified for exercising on a regular basis. Potential water quality and isolation concerns shall be recognized. The program shall track the annual results and set goals to reduce the percent of inoperable valves.
- \* 6) The valve-exercising program may be implemented in conjunction with the systematic flushing program.
- \* 7) A goal of replacing the inoperable valves identified during the operation and maintenance process shall be established as part of the exercising program.

# Yalve Exercising Program

#### Determining which valves are critical

- Transmission mains affecting service to large groups of customers
- \* Distribution valves necessary to maintain service to critical customers such as:
  - \*hospitals, dialysis centers, nursing homes, medical facilities, manufacturing facilities, downtown/high density areas, and service connections where loss of flow could impact human health due to catastrophic events (Waste water treatment plant critical processes or loss of cooling water to processes where it is critical)
- \* Areas prone to main breaks
- \* Areas of infrastructure approaching the end of its useful life
- \* Areas around road or other utility re-construction areas

#### Frequency of exercising

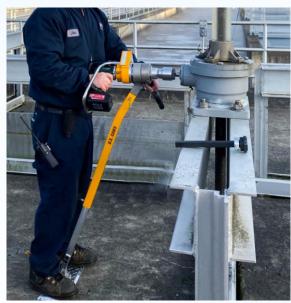

- \*Critical valves annually
- \*Non-critical valves:
  - \*Rate of deterioration known to occur in the distribution system. Systems should operate a representative sample annually to determine rate of deterioration
  - \*Consequence of failure or delays in being able to close the valve

### \*EPA Valve Exercising Program

#### Exercising Extends the life of moving parts for:

Valves
Hydrants
Gates
Pumps

What you really need to get started:

### The Big Picture

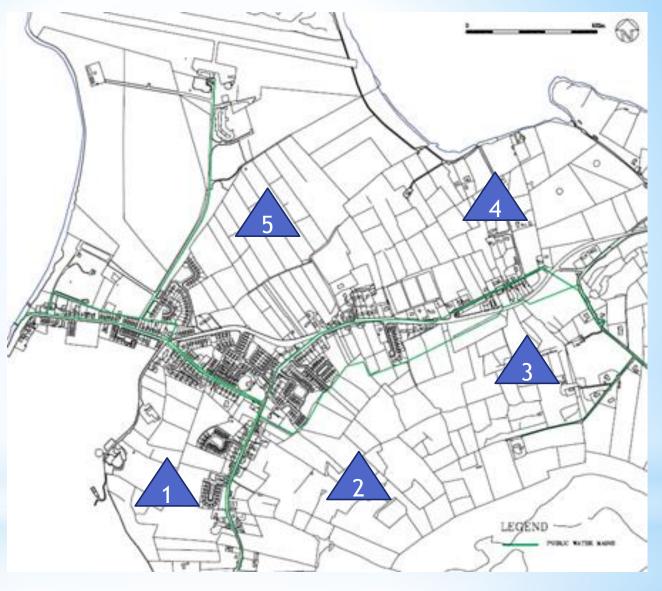

A valve exercising program is more than just a T-handle and spare time.

Very specific tools and resources will need to be allocated to properly implement an exercising program

- \*Start Small and Collect the DATA
- \*Mapping out your system
  - \*Create Zones
    - \* Old Meter Read Routes
    - \* Hydrant Flushing program
    - \* Snowplow routes
  - \*Identify Critical vs. Non-Critical
  - \*Separate non-Critical into 5 zones (years)
- \*Budgeting
  - \*Labor needs
  - \*Tool needs
  - \*Time Needed

Map Zones Find Valves
GIS Location

### \*Budgeting

#### What you really need to get started: The Big Picture

- 1)Locating equipment to find the riser or lid if buried
- 2) Riser clean out tools, auger, clean out shovels, vacuum truck, magnets
- 3) Marking buttons, Maps, layouts, GPS, and methods to document locations and other information
- 4) Valve key, Valve machine, towable or dedicated truck mounted rig

-Lessen workload -Lower risk for Injury -Easy to remove & Replace

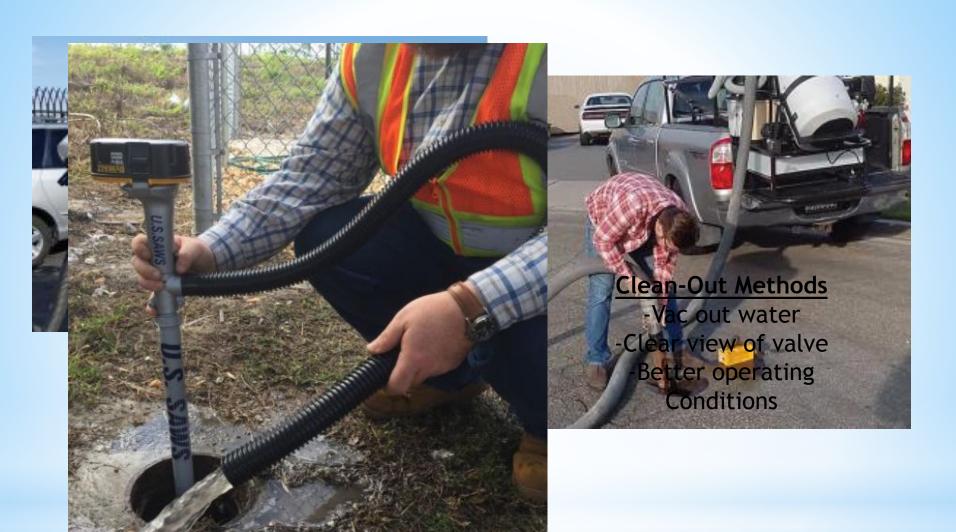

cleanout

Location/ Marking

**GPS/Locating** 

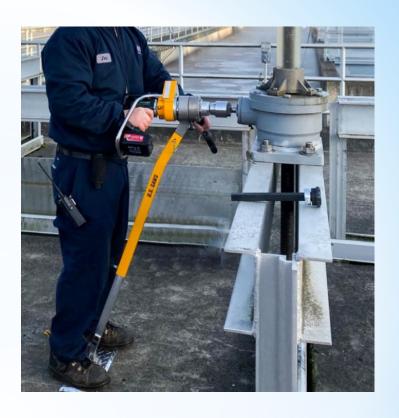

Manual

**Powered** 

Truck/ Trailer Mount

#### **Other Powered Uses**

-Gates

-PIV's

-Hydrants

- \*Closing or opening a valve for any reason
  - \* Did you Turn it and RECORD the data (Date/Time/Operator)
  - \* Water line Breaks valves should be turning
  - \* Hydrant Flushing Crew Maintenance/Service
  - \* Tapping for new Services
- \*Best Practices
  - \* Begin Slowly at lower torque settings
  - \* Get at least 5 10 turns
  - \* Reverse (open) for 2 3 turns
  - \* Reverse (close) for 5 10 turns
  - \* Repeat until fully closed
  - \* Open 2 3 turns to flush debris
  - \* Close and Open full (slowly)
  - \* Turn back ½ turn from full open

# \*What Counts as an Exercised Valve

#### \*RECORD THE DATA

- \*This is most important step
  - \* Valve ID (#)
  - \* Coordinates
  - \* Turns
  - \* Torque Setting
  - \* Date
  - \* Time

	<u>Valve</u>	Coordinates	Turns	Torque	<u>Date</u>	<u>Time</u>

Can I break a valve stem?

<u>Yes!</u> - Most manufactures publish maximum stem torque. Older systems are at greater risk. Determine your maximum torque values so damage does not occur. (you can choose to have a lower amount than the manufactures values)

Can I break a valve stem in the closed position?

Yes! - Do not slam a valve shut. Slow and steady. With a counting device you should have awareness of the valves cycle position.

Do you have an emergency plan if you cut off the West side of towns water supply?

How do I get a valve started?

Getting old valves moving depends on several fundamentals that must be understood.

- 1) Carefully! Forcing a valve to move that has been frozen for moving a valve to move that has been open and close the valve in small increments to clear the runshingsen and easily for the parties of the valve in small increments to clear the runshingsen and easily plays a teller in that
- 2) scanydamage comprehents up and down the valve bindstreamed estime valve famean watereising undchine can take approximate of 30 seconds or more to
- 3) Kromplete amopemor Closing Cycing a frozen valve can lead to permanently damaged parts or a valve stuck in the wrong position. Check with the valve manufacturer for a maximum torque specifications.

### \*Possible tools needed for Repairs

\*Nut Replace Kits

\*Valve Repair Parts

### Questions

- \*Possible tools needed for Repairs
  - \*Saws Air / Hydraulic / Gas
    - \* Chain / Belly / Chop
      - \* Safety concerns first
      - \* Access to Air or Hydraulics vs. Gas

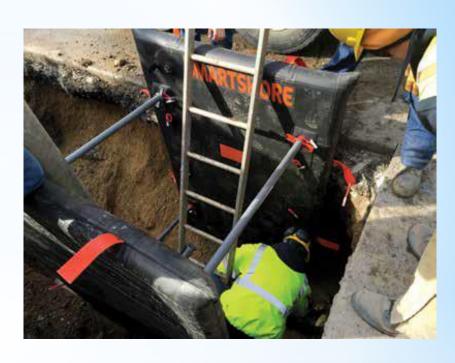

Questions

#### \*Possible tools needed for Repairs

- \*Trench Safety
  - \* Egress Ladders, Steps, etc.
  - \* Boxes
    - \* Rental Offices
    - \* Neighboring Municipality
    - \* Personal Portable Units

2017	15 Trench Colapse	1 in OH
2013-2017	45 Trench Related Deaths	5 in OH

https://www.osha.gov/fatalities/reports/archive

#### In Conclusion:

Over time a valve maintenance program will help keep moving parts operating efficiently and help to make locating valves easier.

There are many variables in every system, and we hope you have learned a few basics to implement your own program.

### Good Luck!
