

DuraDock is the latest innovation in commercial quality pontoon floating dock systems. Our unique framed paired with rugged 18" or 24" fully welded HDPE pontoons provides maximum design flexibility and durability. This is achieved by our exclusively designed and engineered crosser platform found only on our DuraDock system.

The DuraDock platform is designed using the most durable, products and materials. Our goal is to create a commercial level quality design, customizable dock system for residential and business use.

Our micro sienna pressure treated lumber is used for the frame and decking construction. We use 2x8 for the decking with 2 style options (Picture Frame and Standard), this will keep the natural feel and look of a classic dock system yet incredibly strong. Additionally, if your goal is to modernize your dock, we offer a small inlay of color option around the perimeter of the deck.

Either way, you will have the peace of mind that you've made the right choice with a DuraDock from **On the Water Designs**.

Commercial Quality Floating Docks

## Feature Sheet

Welded HDPE Frame using 18" or 24" pontoons, proprietary HDPE crosser system and wood.

Double End Cap on Bottom Gives 1" total thickness and is double welded to prevent ice damage

Picture Frame

Two natural looking frame choices utilizing commercial grade 2x8 lumber

**Picture Wooden Frame**  
for a more premium, high end finished appearance.

**Standard Wooden Frame**  
for the most natural appearance

Proprietary HDPE crosser system creates a rugged connection between upper and lower structural frames without sacrificing the flexibility to create limitless designs

Yellow Trim Rail gives visibility to the dock perimeter while also doubling as a safety handle when in the water
