SICK SAFETY COMMAND DEVICES ROPE PULL SWITCH

The Sick Safety Rope Pull Switch ensures that dangerous movements are reliably stopped over distances up to 75 m. The rope is connected to the rope pull switch for optimum safeguarding of hazardous points that are not protected by safety covers. In the working position, the rope is under tension and the safety-relevant contacts – the positive opening normally closed contacts – are closed. The contacts are opened by a pull on the rope or if the rope breaks, the emergency stop function is triggered. Actuation is possible at any point along the rope.

1064510

Benefits

- 4-pin, M12 Plug Connector
- The emergency stop function can be triggered at any point along the rope
- Simple adjustment of the rope tension
- User-friendly systems available with many rope lengths
- With Flexi Loop: safe series connection including diagnostics with minimal wiring effort
