## How to Estimate Your Bedroom Size

- Measure the longest and shortest walls
- Carpet comes in 12-foot widths
- Divide the shortest wall by 12 to estimate cuts

### Examples:

10' x 14' bedroom = 140 sq ft (within package limit)

Closet typically requires a seam due to carpet width — **\$55 add-on**

15' x 18' bedroom requires two 12' x 18' cuts (worst-case estimate)

*Seams may reduce total material required depending on layout.*
