## Screen2auto 3.5.6 apk

Screen2auto 3.5.6 apk download.

For what I have read, this systemizer thing allows Android 11 users to use Magisk 21.4 in order to get S2A work with AndroidAuto6. Am I right? Will it work the same for Android 10 users? Thanks. I followed the steps in this website is Chinese.) You could use Chrome to translate to english. Or search the keywords with Magisk, app\_systemizer and Termux. BTW, my Magisk is still v20.4. I had NAV touch screen issue with v21 before. And I have no time to try it now. DOES NOT WORK.... i had: Screen2Auto\_v3.4.5 AA-AIO-TWEAKER-3.0.1-release Android Auto 6.1.6 and it's not working anymore.... s2a is not in AA menu... now i dont' know if AA 6.1.6, ruined all... i deleted everything...and installed again the working anymore.... i think it's AA 6.1.6, because on second phone i had: AMirror AA Phenotype Patcher 0.85 Android Auto 6.0.6 and also worked nicely...then i updated to AA 6.1.6, and sudenly it's not working anymore... even that i uninstalled AA 6.1.6 and installed AA 6.1.6 and installed 6.0.6 back: S anyone, help ?!? Hi s2echo is for those who do not have the possibility to connect 2 smartphone with root that I use only for the machine, but when it is connected I cannot answer the calls that arrive on my personal smartphone (the one without root where I have the sim) I tried the 2 apps you wrote, but they don't work. Thanks for the reply So, I may have found a problem with not being able to freeze my Bluetooth apps thus having both phones connected to my car by Bluetooth. I cannot make outgoing calls (and I assume I can't receive incoming calls) from Android Auto. I can make and receive calls through my car's infotainment system.

receive incoming calls) from Android Auto. I can make and receive calls through my car's infotainment system.

However, this creates a problem when I use Google to search for a phone number then try to make a call. My car phone does not have an active cell subscription. Before I go through all of the effort of figuring out why I can't freeze my Bluetooth, can anyone tell me if I SHOULD be able to make phone calls using Android Auto with the two phone

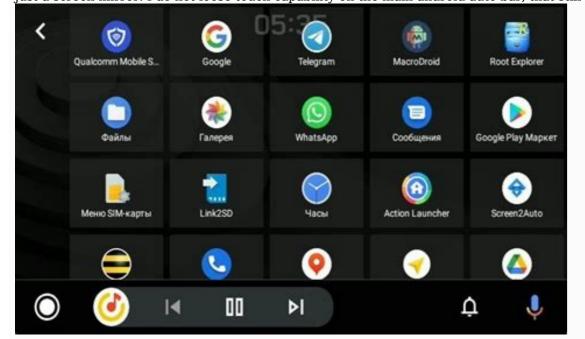

Last edited: Feb 20, 2021 Works for me! OP 8T A11 Magisk 21.410 S2a 3.4.5 AA 6.0.6 Systemizer + s2a->other settings->Automatic shutdown of SELinux (must be enabled). Without this option didn't work. Maybe works without systemizer (I think yes). Last edited: Feb 21, 2021 S2A is working great for me, thank you! Hardware: Xiaomi Mi A2lite Android 10, Magisk 21.4, S2A 3.4.5, Radio Bolero (Skoda Octavia), Android Auto 5.9.6 (dont upgrade to 6 or downgrade) Last edited: Feb 22, 2021 Try to install apk by systemizer. hello, For me it's work fine: Android 8 AA 6.1.61 S2A 3.1 AA-AIO 2.3 magisk 20.4 I've a little problem: when I launch the SFR TV application, on the unit the screen is black but in the same time it 's wrok fine on my phone. Is there a solution? thanks I always get an error from Google play services I'm downloading the stock Android gaps to see if I fix the error, or how can I get Android auto to work? With wat ROM? The fact is that one day all screen2auto Android auto and the phenotipe patcher worked for me and I managed to mirror the car screen but I only saw it once, since then nothing ... Application with App systemizer work plays explication with App systemizer work again. Page 2 Application with App systemizer work plays explication with App systemizer? d The same S2A with APP systemizer in prive-app (only S2A), Magisk 21.4, A11 doesn't work phone S20U or you may need to set other applications in the app systemizer?? d The same S2A with APP systemizer in prive-app (only S2A), Magisk 21.4, A11 doesn't work phone S20U or you may need to set other applications in the app systemizer?? d The same S2A with APP systemizer in prive-app (only S2A), Magisk 21.4, A11 doesn't work phone S20U or you may need to set other applications in the app systemizer?? d The same S2A with APP systemizer in prive-app (only S2A), Magisk 21.4, A11 doesn't work phone S20U or you may need to set other applications in the app systemizer? d The same S2A with APP systemizer in prive-app (only S2A), Magisk 21.4, A11 doesn't work phon

How netflix work with video. ? I Got Stella black screen and only audio work what means autostart mapcam.info in the changelog for 3.4.5 version Added autostart mapcam.info Ahhh... sorry - misunderstanding from my side. Uninstall s2a Turn on termux su systemize option 3 (by apk) ... Next steps Reboot Patch in s2a Reboot Enable automatic shutdown SELinux in s2a Ahhh... sorry - misunderstanding from my side. Uninstall s2a Turn on termux su systemize option 3 (by apk) ... Next steps Reboot Patch in s2a Reboot Enable automatic shutdown SELinux in s2a I do not fully understand how to do lauch s2a.apk with sdcard I entered /sdcard/s2a.apk unfortunately failed to start, which I am doing wrong You can see exact path in total commander You have prompt that s2a have super user permission? I have magisk root. Ahhh... sorry - misunderstanding from my side. Uninstall s2a Turn on termux su systemize option 3 (by apk) ... Next steps Reboot Patch in s2a Reboot Enable automatic shutdown SELinux in s2a followed exactly the procedure does not work for me....Galaxy s9plus, magisk 22.0, android 10, Page 3 come ottengo le applicazioni su due righe e inserisco il widget. Qualcuno di buona volontà che mi può mostrare una guida. I would like the launcher as in the attached photo. Last edited: Feb 24, 2021 I got mine working. I noticed on patching mine was saying "database locked" in the log. Heres how: Check you've got latest version 3.4.5. Revert it in systemizer if you used that then uninstall it. If you're using AA AIO Tweaker open it uncheck any patched apps and choose Revert Everything in the menu. Reinstall Android Auto app. Then install screen2auto by running the apk. Then systemize it as privapp from systemizer's installed app list. Then you'll be able to use the new S2a > Other settings > AA Unlock. I still dont have touch input with latest magisk though. I have SELinux setting enabled etc. But can now see and launch s2a in aa. Last edited: Feb 24, 2021 [OUOTE = "giginogigetto, post: 84550049, członek: 11328931"] postepowałem dokładnie według procedury nie działa u mnie .... Galaxy s9plus, magisk 22.0, android 10, [/ZACYTOWAĆ] Ahhh... sorry - misunderstanding from my side. Uninstall s2a Turn on termux su systemize option 3 (by apk) ... Next steps Reboot Patch in s2a Reboot Enable automatic shutdown SELinux in s2a unfortunately it does not work, I am losing hope that it will all move I can't get the screen2auto to show up on my android auto in my vehicle. I have all permisions granted but nothing shows up. -Magisk 21.2 -Android 11 -Screen2auto 3.4.5 -AA AIO Tweaker Any suggestions. reinstall magisk 21.4 no 20..4 and uninstall -AA AIO Tweaker and install AA Phenotype Patcher 0.85 Xiaomi mi 8 Lite work all OK 1: install AA Phenotype Patcher 0.85 2: install AA Phenotype P AndroidAuto v.9.604644 3: install Screen2Auto v3.4.5 And this Hyundai has automatic gears? It is that in the Toyota CHR it also works well for me until I put the reverse gear with the rear camera and there I get error 11 of Android auto and the mirror function is disabled manual transmission. manual transmission, and that there must be the problem that I have with my Toyota with automatic transmission, when I change to D I have to go through the R gear, which activates Well then it is clear that you are better with manual transmission, when I change to D I have to go through the R gear, which activates the rear camera and that is where the Android auto failure jumps and stops doing the mirror function with screenauto and phenotipe patcher, I wish someone knew how to solve it. Reactions: mapobean Anyone know how can I customize the background image with other personal images? I have given S2A access to internal storage but they are not seen from S2A. I have put them in Android/data/ru.inceptive.screentwoauto/background Thanks. Last edited: Feb 26, 2021 Good day all, I've managed to install the following on a Samsung Galaxy Note 3 (hlte, SM-N9005) in the following sequence: TWRP 3.5.0 9-0 Lineage OS 17.1 (Android Managed to Install the following sequence) are not seen from S2A. I have put them in Android/data/ru.inceptive.screentwoauto/background Thanks. Last edited: Feb 26, 2021 Good day all, I've managed to install the following sequence: TWRP 3.5.0 9-0 Lineage OS 17.1 (Android Managed to Install the following sequence) are not seen from S2A. Last edited: Feb 26, 2021 Good day all, I've managed to install the following sequence: TWRP 3.5.0 9-0 Lineage OS 17.1 (Android Managed Control Managed C 10) Open Gapps arm 10.0 Pico 20201201 (anything more recent breaks the Android Auto) Android Auto 6.1.610543-release (Developer Mode, Unknown Sources enabled) Magisk Manager 22.0 (apk) Magisk 22.0 (zip, flashed through TWRP) Rootchecker (to ensure device is properly rooted) Screen2Auto 3.4.5 AA-AIO-TWEAKER-3.0.1 (patched Screen2Auto) Result: When Im in my car and connect the usb cable Android Auto starts up nicely. In the Apps I do have the Screen2Auto App. When I click on an app the app opens from my phone and I can for instance stream Netflix, Youtube, you name it. So far so good. BUT there is one big issue: As soon as I select an app in my Screen2Auto app running on Android Auto in my car. The app starts but I can no longer control anything through touch on the car display. It basically becomes just a screen mirror. I do not loose touch capability on the main android auto bar, that still works. Also the floating home button that Screen2Auto provides keeps working; But no touch control in the window of the apps like Netflix, youtube, etc. It does notthing. So at that point I have to take the phone manually and navigate there to select what movie I want to play on Netflix. When I go back to the app drawer on Screen2Auto touch is back. Very strange. Has anyone experienced this before? Im a missing something obvious? Is someone able to assist me on this? Any help is much appreciated! Good day all, I've managed to install the following sequence: TWRP 3.5.0\_9-0 Lineage OS 17.1 (Android 10) Open Gapps arm 10.0 Pico 20201201 (anything more recent breaks the Android Auto) Android Auto (a.1.610543-release (Developer Mode, Unknown Sources enabled) Magisk Manager 22.0 (apk) Magisk 22.0 (zip, flashed through TWRP) Rootchecker (to ensure device is properly rooted) Screen2Auto 3.4.5 AA-AIO-TWEAKER-3.0.1 (patched Screen2Auto) Result: When Im in my car and connect the usb cable

Any help is much appreciated! I have install in a nexus-5x many custom roms, lineage etc.. With android auto there are problems. Some times it does work everything ok until some day Google changes something in gaps and something stopping working. I installed a nougat rom based to original, debloated it to the limit just to have android auto working and some more others i need. It is best way... You don't actually gain anything upgrading to android 10, at least for android mirroring works better. OnePlus 8T AndroidAuto 6.1.6 Works fine (with touch). Only thing is missing button (1 tap - back, 2 taps - main screen).

Last edited: Feb 27, 2021 Those who want to use S2a without any problems can relax with magisk 20.4 course. I have tried everything (20.4) except the touch screen did not work. I gave up now. Continue with magisk 20.4 does not work on A.11 alone. so I came back to A.10. galaxy s20 Ulta I don't know where is the difference but I have magisk 22, al1, systemizer s2a, disabled selinux and it works. Good day all, I've managed to install the following sequence: TWRP 35.0 9-0 Lineage OS 17.1 (Android 10) Open Gapps arm 10.0 Pico 20201201 (anything more recent breaks the Android Auto 6.1.610543-relaces (Developer Mode, Unknown Sources enabled) Magisk Manager 22.0 (apk) Magisk 22.0 (zip, flashed through TWRP) Rootches (seren2Auto 3.0.1 (patched Screen2Auto 3.0.1 (patched Screen2Auto) Result: When Im in my car and connect the usb cable Android Auto starts up nicely. So far so good. BUT there is one big issue: As soon as I select an app in my Screen2Auto app running on Android Auto in my car. The app starts but I can no longer control anything through touch on the car display.

It basically becomes just a screen mirror. I do not loose touch capability on the main android auto bar, that still works. Also the floating home button that Screen2Auto provides keeps wetking; But no touch control in the window of the apps like Netflix, youtube, etc. It does notthing. So at that point I have to take the phone manually and navigate there to select what movie I want to play no Netflix. When I go back to the app drawer on Screen2Auto touch is back. Very strange experienced this ? Any help is much appreciated! OK small update: This time around I've installed: Lineage OS 18.1 (Android 11) (Already included Android Auto 61.610543 after Google Playstore Update (Developer Mode, Unknown Sources enabled)) MindTheGapps-11.0.0-arm-20210220\_134931 Magisk Manager 22.0 (aplx) Twenty Roper (to ensure device is properly rooted) Screen2Auto 3.4.5 AA-AIO-TWEAKER-3.0.1 (rooted and used to patch Screen2Auto + Reboot as required) Given root to Screen2auto and all required permissions enabled and allowed. Just as before; It works but no touch in apps. I have touch in the Screen2Auto app drawer and clock; When I click on an App to open it does; But from that moment on no more touch in the app; I do still have touch on the floating home button and the double finger touch opens up the screen2auto app drawer and I have touch again. Very Strange it's as if there is one touch service that is not properly transferring back to android. I do here the click sounds however on my car when touching the display; I just don't have any reaction. Page 4 Smartphone screen on Anddroid Auto the transferring back to android. I do here the click sounds however on my car when touching the display: I just don't have any re

4. Floating button to control the application from the HU screen. 5. Ability to reset if incorrect output and resolution distortion. 6. Many other chips... Install Screen2Auto 2. Enable developper settings in Android Auto and enable Unkown sources in developper settings. 3. Use the AA AIO TWEAKER from @shmykelsa for activation third-party applications. 4. Launch the application and perform the initial setup of permission recovery.

Click on the button and save them.5. Make the necessary settings as desired. Warning: If, after turning off the smartphone or exiting AA (turned off the smartphone did not return to its original state (the recovery settings, failure, smartphone features, etc. were set incorrectly, etc.), you need go to Settings → Reset settings and select the WM SIZE RESET option. Resolution will be restored to factory.

Don't forget to use the button (if you want course): Warning! New version of the application released! Thanks to everyone who offered delicious coffee! All of this thanks to all caring people. What's newPreview Well, as usual, I will be glad your coffee Download: ↓↓↓ No. Screen2Auto screen rotation settings will only reset once you disconnect your phone from the head unit. If you want to handle many different scenario of screen rotation, I advise you to use Tasker and Rotation Orientation Manager. It's not easy at first but then you can automate a lot of things Good day all, I've managed to install the following on a Samsung Galaxy Note 3 (hlte, SM-N9005) in the following sequence: TWRP

3.5.0 9-0 Lineage OS 17.1 (Android 10) Open Gapps arm 10.0 Pico 20201201 (anything more recent breaks the Android Auto) Android Auto 6.1.610543-release (Developer Mode, Unknown Sources enabled) Magisk Manager 22.0 (zip, flashed through TWRP) Rootchecker (to ensure device is properly rooted) Screen2Auto and Android Auto in my car. The apps It have a few soon as I select an app in my Screen2Auto app running on Android Auto in my car. The app starts but I can no longer control anything through touch on the car display. It bases one and show me may be made and in the past it is not loose touch capability on the main android auto bar, that still works. Also the floating home button that Screen2Auto provides keeps working; But no touch control in the window of the apps like Netflix, youtube, etc. It does not his? Any help is much appreciated! Not applied to take the phone manually and navigate there to select what movie I want to play on Netflix. When I go back to the app drawer on Screen2Auto touch is back. Very strange. Has anyone experienced this before? Im a missing something obvious? Is someone able to assist me on this? Any help is much appreciated! Not appreciated in the problem. Any is governed to the same prob

Screen2Auto with the patcher. Edit: Touchscreen IS working after Selecting "automatic shutdown of SELinux" under other settings.

I have only tested with a few apps but Sound works on but IPTV extreme app. (Have Video but no sound.) Pretty cool so far, but Not Quite the experience as using My jailbroke iphoneSE with Carplayeneble, where everything works flawless and can be controlled from the Car radio. Will be following this thread regularly. Thanks! Last edited: Mar 1,

2021 Reactions: ninjakira and ruszok If you can hide that bar you need the substratum lite apk download it from play store ... then register in telegram and download the AA themes app from the telegram group, install and once installed you go back to substratum lite, you give it root permissions, and you open the AA themes apk that will appear inside ... I'll make a video for you Ke see the steps I do not speak English so watch the video and where it says selected extra you select hide scrollbar if you want to see a guide in the same telegram group of AA THEMES you only need the extra AA if you want for example to change the wallpaper you also download the wallpaper apk that is in the same telegram group and quiet it does not charge it is free .. just to enter in telegram you need your phone number and ready you look for the group that I told you to themes by shmykelsa And HAy you have it all I have hidden that menu .. to occupy more the full screen and changed the colors ect ect many tricks ... once you have everything, patch android car with IOTWEAKER you will need it to be able to apply the changes you want: P I should have researched this more! I did the steps listed/shown in the video. Changed "hidescrollbar" and NavBar to 0.9x. Now it has affected my ENTIRE phone, not just Android Auto. The screen doesn't fill out the entire phone now and the buttons at the button no longer work, including the home button. Restart doesn't change it back. I also cannot make changes in substratum lite anymore to try and reverse the theme applied. It will not let me select the checkbox or 3 dot menu. I can't even exit the Substratum lite app without restarting the phone because the back/Home buttons don't work at the bottom. Any help on how to fix this is appreciated! Anyone know how use netflix? Page 5 Works fine for me. Promised photos. And short video as proof that touch works at A11 with magisk 22. Last edited: Mar 1, 2021 Reactions: clarkgable, mackus 44 and cosmic child Works fine for me. Promised photos. And short video as proof that touch works at A11 with magisk 22. Samsung galaxy S9+ - Magisk 22. Samsung galax 10 - AA ver 6.1.6 - TOUCH SCREEN ON MY CAR DOES NOT WORK!!!!!! Must be something in phone firmware. I don't know... SO I've finally managed to install the following sequence: TWRP 3.5.0 9-0 Lineage OS 17.1 (Android 10) Open Gapps arm 10.0 Pico 20201201 (anything more recent breaks the Android Auto) Magisk 22.0 (zip, flashed through TWRP) Magisk Manager 22.0 (apk) Rootchecker (to ensure device is properly rooted) Android Auto 6.1.610543-release (Developer Mode, Unknown Sources enabled) Screen2Auto 3.4.6 (Automatic Shutdown of SELinux => To restore Touch in Apps from Car Head Unit) AA-AIO-TWEAKER-3.1 (patched Screen2Auto) Extras4AA 4.9.2 + Substratum Lite 0.5.20 (Rooted; To tweak some AA GUI elements) And I have certain small issues that remain to be tweaked if possible; Maybe some of you have had similar experiences in the past and know how to clear up some of my issues: Netflix; VLC; Youtube Vanced; The Video playback can appear a bit choppy from time to time on the Car Head Unit; Where on the phone screen itself it does not do that. Is this a framerate mismatch? or do I need to enable some settings somewhere in android? Sometimes the audio can be just ever so slightly out of sync? any fix for this? Disney + is the only app that does not allow me to show video content on the Head Up Unit in the car. The Disney+ app interface lets me browse fine through the catalogue but as soon as I hit play on a movie; I only hear sound and it's a black screen; Where on the phone I do see the content. Is this due to DRM protection? Is there a way around this? Netflix is the only app which I did not manage to go for landscape orientation. All other apps go for landscape orientation however only when video playback starts. But browsing for content it's stubborn enough to stick to portrait. This has nothing to do with Screen2Auto but maybe some of you know how to fix this nuissance? I've tried the "Rotation Control App" and I managed to turn around any app I desire; Except for Netflix. Even when purely on the phone display there is no way to get it to rotate orientation. I love the new Permanent Panel to show you the quick launch bar. My Icons however are cut off at 2/3rds; I cannot see the full circle; I somewhat like it because it gives it this artsy beautiful feel to it; But not sure this is working as intended? I'm struggling to completely disabled under the Location Tab in Android; I've used SuperFreezZ to freeze the 2 Android Bluetooth Services (Bluetooth & Bluetooth MIDI Service) I've used AA AIO Tweaker to "Disable Bluetooth Auto Connect" In Android Auto is running) I've even removed the bluetooth connection from the Car Interface so they no longer know each other. And after doing all that I still can't keep a bluetooth connection active on my Main Phone. My Main Phone active on my Main Phone (Screen2Auto Rooted phone) the bluetooth is disconnected with the Main Phone. But I cannot see a bluetooth connection active with the Dummy phone since every Bluetooth Setting in the book is disabled; Or am I missing something? I must be of course. I just don't know what Can anyone assist on this? Any help or input will be greatly appreciated. Last edited: Mar 2, 2021 SO I've finally managed to install the following on my 8 year old Samsung Galaxy Note 3 (HLTE, SM-N9005) in the following sequence: TWRP 3.5.0 9-0 Lineage OS 17.1 (Android 10) Open Gapps arm 10.0 Pico 20201201 (anything more recent breaks the Android Auto) Magisk 22.0 (zip, flashed through TWRP) Magisk Manager 22.0 (apk) Rootchecker (to ensure device is properly rooted) Android Auto 6.1.610543-release (Developer Mode, Unknown Sources enabled) Screen2Auto 3.4.6 (Automatic Shutdown of SELinux => To restore Touch in Apps from Car Head Unit) AA-AIO-TWEAKER-3.1 (patched Screen2Auto) Extras4AA 4.9.2 + Substratum Lite 0.5.20 (Rooted; To tweak some AA GUI elements) And I have to say I'm pretty damn impressed with this app; I've set it up nicely and most things work brilliantly. I do however still have certain small issues that remain to be tweaked if possible; Maybe some of you have had similar experiences in the past and know how to clear up some of my issues: Netflix; VLC; Youtube Vanced; Youtube Vanced; Youtube Music; Work wonderfully and I do have video on the head unit no problem. now and again I do have video on the head unit no problem. a bit choppy from time to time on the Car Head Unit; Where on the phone screen itself it does not do that. I must be of course. I just don't know what Can anyone assist on this? Any help or input will be greatly appreciated. -Some apps do have problems to go to landscape (but most do), if not you can't do anything for this. Try some more app to "force landscape", don't all do the same result. I haven't try those you have problems. -Mirroring needs some cpu power. I had a nexus 5x. It was working mostly fine but a bit slow. I debloated most things and it went much better. I now broken screen of galaxy note 8 and using in car for mirroring. Its like car head unit runs android. You can't be expecting miracles. -The apps you say using drm, probably this is the reason. I don't think there is a solution. In nexus and note i only use aio tweaker "disable Bluetooth" and does the job. - Try a debloated rom WITH gaps based in original rom. Aosp, lineage, etc have problems. finally worked w/ downgrade to magisk 20.4 on samsung s7. great app! great features! I know that this is came from AA but is there any way to disable gmaps autostart? I have tried the on LAUNCHER APP ENABLED DISABLED.xml but does not work. I search all these 57 pages of this thread but I canno find any user to 'play' w/ wallpapers? Is there any way to add our own? I import mine 930X480 png file under /data/data..../files/background, I changed permissions to 10183/u0\_a183 but images are not available on screen2auto background menu. any ideas? thanks again Hi fully, Take the aoi tweaker... Ist more easy S2A seems ok on my Mi 9T pro (magisk 22) But how to set netflix view in landscape? finally worked w/ downgrade to magisk 20.4 on samsung s7. great app! great features! I know that this is came from AA but is there any way to disable gmaps autostart? I have tried the on LAUNCHER APP ENABLED DISABLED.xml but does not work. I search all these 57 pages of this thread but I canno find any user to 'play' w/ wallpapers? Is there any way to add our own? I import mine 930X480 png file under /data/data.../files/background, I changed permissions to 10183/u0 a183 but images are not available on screen2auto background menu. any ideas? thanks again AIO Tweaker..try iy [QUOTE = "gullzway, publicación: 84582617, miembro: 696775"]; Debería haber investigado más sobre esto! Hice los pasos enumerados / mostrados en el video. Se cambió "hidescrollbar" y NavBar a 0.9x. Ahora ha afectado a TODO mi teléfono, no solo a Android Auto. La pantalla no llena todo el teléfono ahora y los botones del botón ya no funcionan, incluido el botón de inicio. Tampoco puedo hacer más cambios en el substratum lite para intentar revertir el tema aplicación Substratum lite sin reiniciar el teléfono porque los botones Atrás / Inicio no funcionan en la parte inferior. ¡Se agradece cualquier ayuda sobre cómo solucionar este problema! screem2auto dale a una opción llamada WM SIZE RESET y automáticamente se recoloca todo....a mi me paso lo mismo y se reconoce la pantalla.. sin problemas -Some apps do have problemas to go to landscape (but most do), if not you can't do anything for this. Try some more app to "force landscape", don't all do the same result. I haven't try those you have problems. -Mirroring needs some cpu power. I had a nexus 5x. It was working mostly fine but a bit slow. I debloated most things and it went much better. I now broken screen of galaxy note 8 and using in car for mirroring. Its like car head unit runs android. You can't see that is mirroring. So cpu is important. I debloated this also. In 3 seconds it runs mirroring. Your phone is old, you can't be expecting miracles. -The apps you say using drm, probably this is the reason. I don't think there is a solution. - In nexus and note i only use aio tweaker "disable Bluetooth" and does the job. - Try a debloated rom WITH gaps based in original rom. Aosp, lineage, etc have problems. I expierienced serious problems with my rooted note 10, when i connected to the head unit and start screen2auto it not really worked well I tuched some buttons and disconnect the phone I see my phone screen gets smaller with two horizontal black bars on top and bottum with resulted in rerooting the phone this happened 2 times already is the somebody who has an explanation for this and can help me to install and correct working app, thanks [QUOTE = "gullzway, publicación: 84582617, miembro: 696775"] ¡Debería haber investigado más sobre esto! Ekran stoğa geri dönmez [/ALINTI] VM SİZE RESET press Page 6 Tested on rooted s21 ultra. Une ui3.1, android 11. works perfect everything is normal but touch is not working on the car screen. how did you do it. I had exactly the same problems 2 times already and could not fix it so rerooted again, for me no screen2auto anymore, carstream work perfect and thats enough at the moment waiting a better screen app will come. oo I've tried it at least 10 times. I gave up now. but android 10 works fine with magisk 20.4. Reactions: Rasec2002 And how can i make screen2echo works? I can't do, i have try everything with no success. Any help plz I think this is a great app!! For all those having problems with the app, ii you are on Android 10, go back to Magisk 20.4. For android 11, I cannot tell. does anyone face issue using steering wheel buttons to control youtube in screen2auto? Doesn't work fior me, any help plz? Hi all Another issue, i managed to launch Google maps out of AA, but the problem is the start button doesn't respond after getting directions while if i disconnected the phone from AA it works..... Thanx in advance for any help Sorry if it has been asked, but is there an English version of screen2echo. I have no clue what I am looking at. Would love to use my second phone without a sim in the car permanently. Thank you after google translate, I faced same issue one time, reconnect your phone again on your car and close/exit AA from there, after cable disconnection phone works smoothly. Thanks, but I already ended up Factory resetting that phone, Moto Z3 Play, couldnt fix the screen issue. Now Im using a Moto G stylus and Screen2Auto isnt working, doesn't show up in AA. May be because I'm on Magisk 22. Not worth it for me to downgrade, I'll just use my spare iphone SE with carplayenable in my Truck for now. Maybe when this app,or another, becomes more stable and easier to use I'll take another look. I need some help with a 2 phone setup. My car phone (CT) is a rooted LG G2 (Android 7.1.1 with no data/cell plan). My primary phone (PT) is an unrooted Galaxy S7. My car allows multiple phones to be connected by Bluetooth to my headunit. However, only one phone (primary) can be set for both incoming and outgoing calls. All the other phones are incoming calls only. I connect my PT for incoming and outgoing calls; and my CT gets automatically connected and set for incoming calls only. This works pretty good with one exception. I can't make outgoing phone calls from within AA. If I do a search using Google Assistant and try to phone a number I found I get a "Voice commands not available right now" message. I can make and receive phone calls using my car's Bluetooth connection to my PT. I tried freezing my CT Bluetooth with various apps but they would still let my CT connect to my ear's Bluetooth MIDI Service 7.1.1 and Bluetooth Share 7.1.1. I can freeze the MIDI service and Bluetooth still works but my CT still connects to my car for incoming calls. However, if I freeze Bluetooth Share the Bluetooth S The app needs to be connected to my radar detector by Bluetooth. So my CT Bluetooth needs to be enabled. Is freezing Bluetooth supposed to be the same thing as disabling it? Should I expect to be able to make phone calls from within AA with the 2 phone setup if my CT doesn't have a cell/data plan? Is there some setting I'm missing in my AA CT to allow me to make outgoing calls with the 2 phone setup? Thanks for any help/suggestions. I just found this thread today. After some tweaking and reinstalling, I am able to get video to my car's screen. I have a Moto Z3 Play, Magisk 22.0, and a Pioneer AVH-2500. I did this: 1: install AA Phenotype Patcher 0.85 2: install AA Phenotype Patcher 0.85 2: install Screen2Auto v3.4.6) Enable developer mode in AA, check unknown sources, and patch Screen2Auto with the patcher. Edit: Touchscreen IS working after Selecting "automatic shutdown of SELinux" under other settings. I have only tested with a few apps but Sound works on but IPTV extreme app. (Have Video but no sound.) Pretty cool so far, but Not Quite the experience as using My jailbroke iphoneSE with Carplayeneble, where everything works flawless and can be controlled from the Car radio. Will be following this thread regularly. Thanks! Well I'm def gonna give your suggestions here a try since it seems for the most part we have the same setup going minus phones and pioneer model but that shouldn't matter hopefully lol thanks for this I'll let ya know if I got it going Screen 2Auto aperture screen setting Screen size and DPi print Automatic fullscreen fit into mobiles screen and plug in cable and run on car radio screen2auto I wonder if "Tap Jacking Protection" in magisk settings is blocking s2a touch input because of the hovering button being detected as an overlay. Will try it soon and report back! Reactions: bigchrizzieboy Does this app work with cars that have knobs or touchpads instead of touchscreens? Or would be it be mirror-only with no input possible? I solved it by downgrading Magisk. Well I'm def gonna give your suggestions here a try since it seems for the most part we have the same setup going minus phones and pioneer model but that shouldn't matter hopefully lol thanks for this I'll let ya know if I got it going Trying this out again and it's working well so far. Moto Z3 Play fresh after factory reset, rooted with Magisk 22.0. Installed the latest Android Auto(6.1.610544) and enabled developer mode, checked unknown sources box. Installed Screen2Auto 3.4.6 and went to Other setting and Clicked the AA Unlock. Reboot phone. (I had issues with this option not being available/not doing anything on my Moto G stylus phone.) Select apps you want too show up in Screen2 auto settings. Then installed AA Phenotype patcher, selected screen2auto in apps, and Patched, reboot. Youtube Vanced(no ads) working, IPTV apps working. Netflix and Direct Tv Apps work, but are in Portrait until a video is actually played(same on the phone, so no way around that.) Screen doesn't seem to fill my Pioneer NEX all the way regardless of whether I select fit or fill in Screen2Auto settings. Not sure if I'll mess with removing the AA Bar at the bottom( although it takes up a lot of room.) Don't want to mess with theme settings, maybe an easier fix will be available. I use Orientation Control to force the rotation. You can define app specific states. Or Tasker may be able to set it only when using aa if you have the patience to set it up Put this on my One Plus 7T and works great. If developer is still active here, any way to put force screen brightness to 0 as a shortcut on the touch button? This is the only thing that sometimes doesn't work as I want to shut off the phone display while using s2a. Thanks! Is it possible to launch another launcher when pressing screen2auto button directly without going to screen2auto launcher. For information i already activated the option in OTHER SETTINGS to launch app directly, but the issue is once you press on screen2auto icon it takes you to screen2auto launcher first then to the other activated app. Is it possible to launch another launcher when pressing screen2auto button directly without going to screen2auto launcher, For information i already activated the option in OTHER SETTINGS to launch app directly, but the issue is once you press on screen2auto launcher first then to the other activated app. I can't for s2echo work? What should be installed on the other phone? Thanks, Tamas Reactions: Blisset Hi there, I hope someone of you can help me further with my situation, perhaps @ruszok who has a Oneplus as well? I'm trying to get Screen2Auto to work on my Oneplus 7 Pro (GM21BA) on my Pioneer SPH-DA230DAB. I'm running rooted OxygenOS 10 with Magisk 22.0 and AA AIO Tweaker 3.2.1. My phone does have default GApps installed, but I am not using/not logged in an account and have lots of GApps disabled. (Ultimately, I would want to use MicroG, perhaps with LineageOS as well, in the future.) When I connect my phone to my Pioneer head-unit, I barely get any apps to use. AOI Tweaker DOES say it can not apply changes because of several possible reasons, one of which is not having an account logged in with Google. When I use an older version of AIO Tweaker such as 2.7, it does not tell me this and I DO get a green check-mark with enabled apps. Of course, in AA developer options is on with unknown sources enabled. The weird thing also, is that AA tells me this: It assumes that Sygic should be allowed, I guess? Still it doesn't appear. I only get Spotify, DS Audio (from Synology), Settings and 2 other irrelevant apps, that's all. Sygic just developed this beta for AA, v19.0.3., which I have and enabled in their app. So the question is: What do I have to enable/disable to get it to work. Also, would MicroG work with all of this instead of GApps? Did I forget anything else? Sorry for the long story. TL;DR: Desired apps not showing in AA, even after tweaks. Thanks in advance for your help! Hi Guys! It works flawlessly for me with one exception. When I open an app, it does not respond to touch control in the car. S2A responds, I can move the button as well, just can't scroll or anything similar inside the apps. +1 How does s2echo work? What should be installed on the other phone? Thanks, Tamas No one knows the reason? Thank you! Reactions: Iluvwarranty Smartphone screen on Anddroid Auto HU car screen For root devices only! install AA Phenotype Patcher 0.85.apk This does not solve the problem unfortunately. Please take a look at the whole situation. Mainly the question is if not using a google account makes this fail or if it's because I did something else wrong. I wonder why some custom apps are showing, but not all, even when they're in the list on the bottom of the AA app. Hi all,,, Anybody can tell where the S2A pause option in V3.4.6, i can't find it, plz? Hi all. First of all thanks for this nice app. Everything seems to work for me. I have only one issue. I can see the touch button and can move it where I want. When mobile screen is mirrored on sync 3 does not work with phone screen. Using rooted (with magisk) Samsung S8 plus Last edited: Mar 15, 2021 Well I have no touchscreen anymore. I can only normally switch on the phone with only power button. Also S2A crashed when I click Other settings. Any suggestions plz? Last edited: Mar 15, 2021 Anyone knows why we many of us have no touchscreen anymore. I have Galaxy Note 10, A10, S2A 3.4.6, and I had Magisk 20.4 - without any problems. Magisk auto update to 22.0 and I can not boot the phone with volume up + power anymore. I can only normally switch on the phone with only power button. Also S2A crashed when I click Other settings. Any suggestions plz? This screen2auto app destroy more phones than that it work properly ,i not see any response from the developer ,my phone rerooted two times my after struggling with this app,i stop with and with AA A 10 tweaker all the apps in combination with AA and Bluetooth Share with Titanium PRO on my car phone. It disables Bluetooth Share instead of freezing it but I need Bluetooth turned on for other devices. I get a "Voice commands not available right now" if I try to use Android Auto to make a phone call. One thing, I have my car phone in Airplane mode to disable the cell connection to save my battery since I don't have a data plan. I've enabled Bluetooth and WiFi separately. Does the car phone need to be out of Airplane mode for Screen2Auto to work properly on a 2 phone setup? This is my current setup and common problems with fixes that worked for me: Pixel 3a (rooted) Android 11 Magisk 22 Android Auto v6.1.6 AA AIO Tweaker v3.2.1 Screen2Auto "Other settings" - disabled Speed Restrictions in AA AIO Tweaker - disabled Tap Limitations in AA AIO Tweaker Netflix: v7.94.0 - installed "liboemcrypto disabler" module from Magisk - added Netflix to MagiskHide - disabled "Fix Netflix" in Screen2Auto "Other settings" Reactions: tezzad, Nobody2050 and pipoca25 Page 8 Esta é minha configuração atual e problemas comuns com correções que funcionaram para mim: Pixel 3a (enraizado) Android 11 Magisk 22 Android Auto v6.1.6 AA AIO Tweaker v3.2.1 Screen2Auto v3.4.6 Tela de toque do Ford F150 2019 funcionando para controlar o telefone - habilitado "Desligamento automático do SELinux" em Screen2Auto v6.1.6 AA AIO Tweaker v3.2.1 Screen2Auto v3.4.6 Tela de toque do Ford F150 2019 funcionando para controlar o telefone - habilitado "Desligamento automático do SELinux" em Screen2Auto v6.1.6 AA AIO Tweaker v3.2.1 Screen2Auto v6.1.6 AA AIO Tweaker v3.2.1 Screen2Auto v6.1.6 AA AIO Tweaker v6. Thanks, Tamas I have the same issue. Any solution for this? thank you 2019 Ford F150 touch screen working to control phone - enabled "Automatic shutdown of SELinux" in Screen2Auto "Other settings" - disabled Speed Restrictions in AA AIO Tweaker - disabled Speed Restrictions in AA AIO Tweaker How do you setup S2A to car touch screen working with all the apps? For me car touchscreen works with S2A launcher only. Thank you Hopefully someone will be able to help me out. I had to factory reset my phone and reinstall everything. Oneplus 6 latest OOS stable. After installing screen2auto doesn't appear any more. Using the newest version of both apps with newest magisk. I've reinstalled number of times and it just won't show. Hopefully someone will be able to help me out. I had previously been using this along with the aio tweaker app perfectly. I had to factory reset my phone and reinstall everything. Oneplus 6 latest OOS stable. After installing screen2auto doesn't appear any more. Using the newest version of both apps with newest magisk. I've reinstalled number of times and it just won't show. Do other apps show? Also, check the AndroidAuto settings itself and maybe go for developer settings (enable first). for Russian, ask there and stop complaining about a free app that works for the most of us just perfect. Have you already donated some bucks for the dev? 200% agree. Pixel 2 user here. Official support from Google stopped in 12/2020 with Android 11. "Downgraded " to official LOS 17.1 (Magisk 21.+ issue with Android 11 in combination with s2a), atm Magisk 20.4 - success. Not everyone wants s2a for watching videos in car and so on, there are some people who need other, more useful apps, like me. TomTom NDS version with truck support (dimensions, weights) and real time notifications about traffic. S2a works perfectly. Point. Reactions: sosimple I've been unable to freeze my Bluetooth Share with Titanium PRO on my car phone. It disables Bluetooth Share instead of freezing it but I need Bluetooth turned on for other devices. I get a "Voice commands not available right now" if I try to use Android Auto to make a phone call. One thing, I have my car phone in Airplane mode to disable the cell connection to save my battery since I don't have a data plan. I've enabled Bluetooth and WiFi separately. Does the car phone need to be out of Airplane mode doesn't help. I'm still getting the "Voice commands aren't available right now" message when I try to make a call. Should I be able to make calls from Android Auto with the 2 phone configuration but no cell/data plan for the car phone? I've been using S2A for a while on and off, I only use it for one app for offroad navigation really. I tried using it today and it doesn't even show up in android auto anymore. I'm using got the following: Magisk v20.4 AA v6.1.610544 S2A v3.4.6 Installed on: Asus Zenfone 4 (Z01KD) Android 8.0.0 I have tried downloading phenotype patcher 0.85 alone and whitelisting that way. When I look in the setting for android auto S2A is listed. I've attached a screenshot of the permissions and versions Any clues as to why it is no longer showing up? While I was testing initially I also installed AA mirror, that also doesn't show up, so it seems like the whitelist isn't being properly applied? Oh also, AA is in developer mode with unknown sources allowed Last edited: Mar 18, 2021 Reactions:

BRANDENDEUCE Page 9 Any resolution to the fact, that for many of us car touchscreen does not respond to screen it is useless. Thank you Reactions: Blisset my touch is working fine with A11 using senulix switch but i am unable to get s2echo working thats an amazing idea and i desperately needs it Reactions: Blisset Thanks for the apps. Any way to get the notifications from main phone text messages or WhatsApp to read on android auto? Hi there, great app. I hope this app will give some extra above android auto. It would be great if this tool could run without root a device. This take much time, and for most devices (\$10) this a pain in the ass. Is there a overview available about changing for the "best" settings in \$2A? Some settings that run on most devices. Thank you Same problem I have no touch on youtube for exemple Create a 2 app shortcut on \$2a homescreen combining youtube with any other app. Launch the 2 app shortcut, then close. Then create a single app shortcut on the main screen for you tube, or just launch it from the list of apps. Also check to make sure your phone is unlocked after launching youtube (I loose car screen control if locked). Reactions: Blisset Yes, AA Auto patcher now includes message notification "enhancement to AA 5.8 and above.

In AA AIO tweaker I can only see "Enable messaging apps"... This is for apps on the rooted phone. I am unable to get main phone (unrooted) with s2echo. I am unable to get main phone notifications to show in AndroidAuto. Please give more details. I've not figured out what happened. Everything is set up as it should be, and as it was previously, but I can't get it to show up in AA. Yep, me too. Ive now uninstalled and reinstalled both apps, still for no result. Im not really keen to reset my phone or anything, so I guess ill just wait for an updateone way or the other. Reactions: BRANDENDEUCE Hi there I'm having similar issues like some users I read pertain to Screen2Auto not appearing in the AA after following all the steps. Another issue I have is that AA can't be found on my phone apps so I need to download the "Android Auto for phone screens" to access AA on my phone. Not sure if this will also caused the issue I had. Anyway, following are the details and I hope some experts here can provide good advice on how to resolve. TIA Phone: Pixel 2XL System: Android 10 Root: Magisk 22.0 AIO Tweaker: Version 3.3 Scren2Auto: Version 3.4.6 AA: Version 6.2.610914 (PS. I've done uninstalling and re-installing and re-installing all the apps less Magisk). Reactions: BRANDENDEUCE Can someone with a 2 phone setup (and no cell plan on the car phone) tell me if they are able to make outgoing calls from Google Assistant? I can make and receive phone calls through my car's system but not through Android Auto

I'm trying to determine if something is wrong with my system or that is the way it is. Thanks Create a 2 app shortcut on s2a homescreen combining youtube with any other app. Launch the 2 app shortcut on s2a homescreen combining youtube with any other app. Launch the 2 app shortcut on s2a homescreen combining youtube with any other app. phone is unlocked after launching youtube (I loose car screen control if locked). Is this for fixing car touchscreen in all apps? Need Selinux permissive for this to work? Can you explain better the method? Thank you very much Reactions: mirktamas Ok I solved touchscreen for all the apps. I downgrade to Magisk 20.4 (which have Full SELinux permissive for this to work? Can you explain better the method? Thank you very much Reactions: mirktamas Ok I solved touchscreen for all the apps. I downgrade to Magisk 20.4 (which have Full SELinux permissive for this to work? Can you explain better the method? Thank you very much Reactions: mirktamas Ok I solved touchscreen for all the apps. I downgrade to Magisk 20.4 (which have Full SELinux permissive for this to work? Can you explain better the method? Thank you very much Reactions: mirktamas Ok I solved touchscreen for all the apps. I downgrade to Magisk 20.4 (which have Full SELinux permissive for this touch permission for the permissio support). Magisk 21+ doesn't have SELinux. I downgrade Android Auto to 5.9 (because Android Auto 6+ blocks touchscreen for all the apps. I downgrade to Magisk 20.4 (which have Full SELinux support). Magisk 21+ doesn't have SELinux. I downgrade Android Auto to 5.9 (because Android Auto 6+ blocks touchscreen) Now touchscreen works everywthere. Hmm, I'm on Magisk 22.0 and using Android Auto 6.1.610554 and touchscreen is working fine. I accidently broke the phone screen and nothing shown. But the phone still works and loads screen2auto but no thouch on informatics while the usb debugging). Any advice please? Is there any car informatics emulator for pc to replicate the process or something else? Thank you I accidently broke the phone screen and nothing shown. But the phone screen to pc (all solutions require usb debugging). Any advice please? Is there any car informatics emulator for pc to replicate the process or

something else? Thank you Try usb hub and connect a mouse. Page 10 Hmm, I'm on Magisk 22.0 and using Android Auto by uninstalling and downloading lower version apk, google search. I think this has something to do with the phone. I have galaxy s g986b/ds international Exynos running latest Android One UI 3.1 bootloader unlocked running custom Samsung ROM. I tried to downgrade magisk but it didn't make a difference. I broke my galaxy s10+ g975f Exynos but that ran perfect with Screen2Auto my setup was awesome but it was on Android Q maybe it has something to do with the Kernel... That would be my guess since it seems phone manufacture specific........ Reactions: robi101012981 Ok I solved touchscreen for all the apps. I downgrade to Magisk 20.4 (which have Full SELinux support). Magisk 21+ doesn't have SELinux. I downgrade Android Auto to 5.9 (because Android Auto 6+ blocks touchscreen) Now touchscreen works everywhere. What phone do you have? Be specific. Was Android auto installed as a system app? Or did you install it? If it was part of your system ROOT please give a location directory within the system where you deleted Android auto. Hello, on XPeria 5 II android 11 Screen2Auto latest magisk it's very unstable...For example, when I'm on Youtube Vanced, I can't hide the next, previous, pause buttons, sometimes the apps are randomly crashing... so idk why it's happening this... I have rooted phone and touchscreen does not work, it works on app menu but when you select app e.g. youtube then it stops working, the same issue is an AAMirror and AAStream. I have AA 6.0, latest magisk and Lineage OS. Maybe problem is with my car? or should i downgrade AA, any idea? I have rooted phone and touchscreen does not work, it works on app menu but when you select

app e.g. youtube then it stops working. the same issue is an AAMirror and AAStream. I have AA 6.0, latest magisk and Lineage OS. Maybe problem is with my car? or should i downgrade AA, any idea? I've also had this problem, enable into screen2auto, other settings, the ,,automatic shutdown of SELinux", this will fix your problems Also check ,,fix Netflix", maybe this will help you. I am not sure what i need to enable or change where is this option ", automatic shutdown of SELinux"? Enter on the phone on the app called screen2auto, there go to other settings, and select , automatic shutdown of SELinux", then also , ,fix Netflix". And then restart your device I've also had this problem, enable into screen2auto, other settings, the ,, automatic shutdown of SELinux", then also ,, fix Netflix". check ,,fix Netflix", maybe this will help you. This works like a charm, thanks a lot. Do you think that downgrading magisk would a good solution to fix this problems for others AA Mirror, AA Stream apps ? Reactions: robi101012981 This works like a charm, thanks a lot. Do you think that downgrading magisk would a good solution to fix this problems for others AA Mirror, AA Stream apps ? You're welcome! It could be, but I m on latest magisk on Xperia 5 ii android 11 and everything it s working, so I don't think this it s a good solution is there anyway to make cell phone screen dark while using this software ? Hello. Very nice app. But the "Run Tasker tasks" option does not work for me (Oneplus Nord N100). I have simple samples s2a and s2a close (wait, beep, popup text) created, but nothing happens... Am I doing something in a wrong manner? Thanks. Last edited: Apr 2, 2021 is there any way to continue screen2auto and then Timvision I just hear the audio and I don't see the image. I tried to hide first magisk and then magisk hide on the Timvision application but it does not work, has anyone found a solution? I start that on the phone with root I calmly see the movie, but via android car I have this problem Hey guys has anyone checked module magisk SU Connector which allows uncertified apps to use magisk se Linux. In this way es file explorer started to have root access. Maybe this will also work for screen2auto. I found this module on 4pda.ru. if anyone want to try here is the link Su connector magisk module Phone with root when on android auto I start screen2auto and then Timvision I just hear the audio and I don't see the image. I tried to hide first magisk and then magisk hide on the Timvision application but it does not work, has anyone found a solution? I start that on the phone with root I calmly see the movie, but via android car I have this problem Probably has to do with DRM rights, although Netflix works. Other apps like Hulu and ESPN also play audio but no video for me.

Hi there I'm having similar issues like some users I read pertain to Screen2Auto not appearing in the AA after following all the steps. Another issue I have is that AA can't be found on my phone apps so I need to download the "Android Auto for phone screens" to access AA on my phone. Not sure if this will also caused the issue I had. Anyway, following are the details and I hope some experts here can provide good advice on how to resolve. TIA Phone: Pixel 2XL System: Android 10 Root: Magisk 22.0 AIO Tweaker: Version 3.4.6 AA: Version 3.4.6 AA: Version 6.2.610914 (PS. I've done uninstalling and re-installing all the apps less Magisk). If Android Auto doesn't show in your apps, this may work to open it. Go to Settings/apps select show all apps. Click Android Auto and scroll down to Advanced and click. You should see "Additional Settings in the App." This should open the app. Reactions: Vulpes0068 Page 11 hi is it possible to off the phone screen, cause it becomes so hot when using screent2auto when charging?... Last edited: Apr 6, 2021 hi is it possible to off the phone screen, cause it becomes so hot when using screent2auto when charging?.. No, but you can have screen in lowest brightness no heat produced. Only a little battery consumption. Probably the heat has nothing to do with screen. Screen2auto + what app you use (GPS?) are the reason of the heat. Reactions: drorcun Ok, so i got everthing up... I can see screen2auto on my dash, and i can open youtube, etc but once youtube read disabled all app work Its a no go on my s20 a11 u3.1 Here is log: \$ su :/data/data/com.termux/files/home # getenforce Enforcing :/data/data/com.termux/files/home # anything more can be done? Reactions: robi101012981 For all those who could not get the s2a app displayed on the dash screen it is because a a aio tweaker could not patch the app. It may be due to multiple Google accounts in phone. If not, clear the data from google play services.. reboot, then patch the app again. If the app is properly patched, it would be displayed on cars's screen. Last edited: Apr 10, 2021 Reactions: Vulpes0068, neildalal and bastyano For all those who could not get the s2o app displayed on the dash screen it is because aa aio tweaker could not patch the app. It may be due to multiple Google accounts in phone. If not, clear the data form google play services.. reboot, then patch the app is properly patched, it would be displayed on cars's screen. I think that this message could be on the first post. This solve my problem. thanks a lot Reactions: neildalal and BRANDENDEUCE Last edited: Apr 11, 2021 Hello, I have S20+ but the touchscreen on the unit it's not working... I have not been able to find another Kernel to try. I'm running BeyondROM V3.1 [24/03/2021] [DUC7] I think we need to hope someone builds a Kernel "AA Unlock" (inside Screen2Auto) somehow doesn't work on my new device (Oneplus 8 pro with android 11 / magisk 22.1) on my old one it was working

(Oneplus 6T with Android 10 / magisk 22) So I gave root and all the other permissions to the app, set an app for the launcher and ran "AA Unlock" -> reboot. I also tried to enable it using AA AIO tweaker.. which shows a green status but still S2A isn't available in the car. Last edited: Apr 19, 2021 Reactions: BRANDENDEUCE Page 14 Hi, i instal S2A last version but i cant touch on the display in my car. My phone is Galaxy s20 FE android 11 OneUI 3.1 whit Exynos. Can someone help how to decide my problem? How do I fix out of sync audio? i did

everything correct (i think lol) but the screen2auto app still doesn't appears on my car AA even though I tried all advices. How i can install NavTube apk in S2A? Hello all I have samsung s6 with android 7.0. I don't have touchscreen and when I open screen2auto from AA I am not able to select

any app because car's control doesn't work for screen2auto. Any help? Thanks Hello all I have samsung s6 with android 7.0. I don't have touchscreen and when I open screen2auto from AA I am not able to select any app because car's control doesn't work for screen2auto. Any help? Thanks try to use this to fix it if you have more than one google account Thanks! Finally mine is working aft clearing the Google Play Services and Google Play Services an working, I'm hoping to get the S2echo working too. I've read thru the articles earlier but I'm confused how to installing S2A to a non rooted phone as a start. I can't seems to find a S2Echo apk separately and installing S2A to a non rooted phone as a start. get the S2echo working too. I've read thru the articles earlier but I'm confused how to install S2Echo on the non rooted phone as a start. I can't seems to find a S2Echo apk separately and installing S2A to a non rooted phone is not possible. Appreciate some advice in how to advance. TIA S2echo is in the original post. It is in russian, just search this thread for translation. It will tell you what to enable in the app. Hello, is it possible that on the Version "6.3.611324" from Android Auto Screen2Auto is not working anymore?

Since the update the Icon is removed from AA. BR KOAL S2echo is in the original post. It is in russian, just search this thread for translation. It will tell you what to enable in the app.

Many thanks! I've finally got the S2Echo to works too. By the way, S2A is prompting for an update to 3.5. Is it safe to proceed? Will it affect the previous settings? Page 15 can anyone help me regarding this? After the initial setup, everything works fine. But when i disconnect and reconnect later, AA doesnt work anymore always gives error like 'error occured in accessing the usb device' every single time

no matter what i do. Any ideas?

Does Screen2Auto works also with android 7? In first post I read: "the main reason for creating this application is working with Android 9 Pie" but in my mind this is not a limit for previous android 9 is a minimum requisite. So I ask it it works on android 7 is a minimum requisite. So I ask it it works on android 7 is a minimum requisite. © THANK YOU!! Its working at last!!! Samsung note 20 ultra touch and all is working great solution maybe it should be in first page under solution for touch Why you do not explain what is the procedure? If I click on link given, gives me an error "403 Forbidden"......is so difficult to choose another place for normal downloading?,,,ore is a fake?----i never listened about this magix module Why you do not explain what is the procedure? If I click on link given, gives me an error "403 Forbidden".....is so difficult to choose another place for normal downloading?,,,ore is a fake?----i never listened about this magix module I thinks it's because of country restriction that's why you get that error! Use VPN to download it and 1- choose Europe (Netherland) to download it. 2- After downloading just use twrp to install that magist module after that 3- in screen auto check in other settings automatically shutdown selinux 4- in screen auto check in other settings automatically shutdown selinux 4- in screen auto check in other settings automatically shutdown selinux 4- in screen auto check in other settings automatically shutdown selinux 4- in screen auto check in other settings automatically shutdown selinux 4- in screen auto check in other settings automatically shutdown selinux 4- in screen auto check in other settings automatically shutdown selinux 4- in screen auto check in other settings automatically shutdown selinux 4- in screen auto check in other settings automatically shutdown selinux 4- in screen auto check in other settings automatically shutdown selinux 4- in screen auto check in other settings automatically shutdown selinux 4- in screen automatically shutdown selinu restart device 6- connect to car and open screen2auto and then open YouTube or other app and touch will work On the inceptive.ru website there are instructions of how to install Screen2auto and then open YouTube or other app and touch will work On the inceptive.ru website there are instructions of how to install Screen2auto and then open YouTube or other app and touch will work On the inceptive.ru website there are instructions of how to install Screen2auto and AA Stream (and any other other AA compatible apk that is put in the apk folder). I ran the script on my Galaxy S7 and, sure enough, Screen2Auto and AA Stream are available in AA and will run. However, once I open an app, my car's touchscreen stops responding until I get back into Screen2Auto or AA Stream. Has anyone else tried this and successfully got Screen2Auto to work without root? Someone know if Screen2Auto works on Android 7? Hi, I 'm on the latest beta S2A. Everything works, even the touch screen. But i have a problem with Netflix & Youtube. The movie is on landscape mode. Is there any configuration for that? No, beta version 3.5, i have installed, and I have many bugs, I lose touch screen control, and lag in scroll apps, I have to roll back to resolve it.

I've the same issues with beta 3.5; sometimes touchscreen doesn't work; did you manage to have it working properly with a downgrade to the previous version? if yes, what version have you installed? Reactions: PeterParker I've the same issues with beta 3.5; sometimes touchscreen doesn't work; did you manage to have it working properly with a downgrade to the previous version? if yes, what version have you installed? I'm back to v3.4.6, and evething works again, less s2echo, i never get it work. I don't no why. I'm back to v3.4.6, and evething works again, less s2echo, i never get it work. I don't know how to tell). My primary's phone's hotspot doesn't turn automatically and I can't make phone calls using Google Assistant from my secondary phone. This is one question I haven't got an answer to. My secondary phone (the one connected to my car and running Screen2Auto) doesn't have cell service. Should I expect to be able to make outgoing phone using Google Assistant if everything is working correctly? Since a couple of days I encounter a very wired behaviour. When opening S2A, I can select the apps as expected, but when starting any app the (car-)screen turns black. I see/hear the app starting on the phone, but the behaviour does not not change. The issue started with v3.4.6 and is the same with v3.5beta. AA is 6.3.611324release, running on Poco F2 Pro with Android11, rooted with Magisk22.1. Any idea what is wrong? Solution: in Settings -> App: Allow Fullscreen Mode Last edited: May 4, 2021 Finally S2A touchscreen works on my unit car this is what i did on my phone...galaxy s9+, magisk 22.1, andorid 10, S2A 3.4.6, android auto 6.3.6: 1- download first of all the file SU CONNECTOR.zip...(new link above). 2- After downloading use twrp to install the magisk module, reboot phone 3- in screen2auto check in other settings automatically shutdown selinux 4 - connect to android auto and.......touchscreen works... New link for download magisl module: (Click on nitroflare uploded file) Can anyone tell me why screen2auto, aamirror etc are showing 'No new messages in in this drive' on car screen instead of mirrored screen either. I am on Android 11, AA 6.3, Realme UI 2.0. please help. Hello everyone! There is a way to install any applications for AA on devices without Root. Important! Not known how long it will work (until Google closed it), but now it works, including for S2A. How it works in the same for S2A. How it apk name instead blablabla) adb push blablabla.apk /data/local/tmp/app.apk adb shell rm /data/local/tmp/app.apk adb shell when running S2A without Root. But what we have is what we have it would be all the work of the have is what we have it would be all the have in the have is what we have it would be all the have in the have is what we have it would be all the have in the have it would be all the have in the have it would be all the have in the have it would be all the have it wo

for S2A. How it works: 1. Put the ADB folder on the PC. 2. Put the applications that we want to install in ADB folder. 3. Turn on USB debugging and connect the smartphone to PC. Enter ADB folder through cmd (cd c:\ ADB) 4. Enter the following commands (inserting apk name install -i "com.android.vending" -r /data/local/tmp/app.apk adb shell rm /data/local/tmp/app.apk 5. After that, the application should appear in Android Auto list To install S2A in this way, you must use the latest version 3.5beta I installed Screen2Auto is available in AA and I can navigate within it using my car's touchscreen. However, when I open an app from Screen2Auto it won't respond to the car's touchscreen. It will respond on the phone's touchscreen and I can see the actions being mirrored on my car's screen. If I close the app Screen2Auto toggle for root access to Off or On when installed this way? Thanks 1 - Is there a way to fix this? Also, should I set the Screen2Auto toggle for root access to Off or On when installed this way? Thanks 1 - Is there a way to fix this? fix this? 2 - Also, should I set the Screen2Auto toggle for root access to Off or On when installed this way? Thanks 1- Unfortunately this is not possible.

2 - Irrelevant Hi, i installed this app using aad. I have a Huawei p30 pro without root The mirror start but the apps not works, i have black screen with only floating button 1- Unfortunately this is not possible. This requires access to system files need a root You need to add an application to S2A Launcher on your smartphone. Then it can be run. 2 -Irrelevant 1 - Thanks! I got my app to work by using the S2A Launcher. It seems a little clunky but I'll use it for a while to see if it smooths out. 2 - I had to toggle to enable root before S2A Launcher. It seems a little clunky but I'll use it for a while to see if it smooths out. 2 - I had to toggle to enable root before S2A would let me past the initial setup screen. One thing I've noticed is the apps aren't very responsive to touches on the car's touchscreen input. I'm assuming this is this the way it is going to be on my non-rooted phone, correct? Ho installato Screen2Auto, non risponde al touchscreen della mia auto. Tuttavia, quando apro un'app da Screen2Auto, non risponde al touchscreen dell'auto. Risponderà sul touchscreen del telefono e posso vedere le azioni riflesse sullo schermo della mia auto. C'è un modo per risolvere questo modo? Grazie Hi guys, I have the exact same problem. I have another question about display rotation, what is the Recommended mode? is there the ability to rotate on the phone screen for any app, including those that don't rotate on the phone screen? Thank you Ciao ragazzi, ho lo stesso identico problema. Ho un'altra domanda sulla rotazione del display, qual è la modalità Raccomandata? c'è la possibilità di ruotare lo schermo per qualsiasi app, comprese quelle non ruotano sullo schermo del telefono? Grazie Last edited by a moderator: May 4, 2021 Ciao ragazzi, ho lo stesso identico problema. Ho un'altra domanda sulla rotazione del display, qual è la modalità Raccomandata? c'è la possibilità di ruotare lo schermo per qualsiasi app, comprese quelle non ruotano sullo schermo del telefono? Grazie take a look at my post 1336 on page 67 of this forum date un'occhiata al mio post nr 1336 di pagina 67 di questo forum Last edited by a moderator: May 4, 2021 Unfortunately, since I don't have a rooted smartphone, I can't install those modules Purtroppo non avendo lo smartphone rootato non posso installare quei moduli.... Last edited by a moderator: May 4, 2021 Hi I added Youtube Vanced Did I miss something? plz help, many thanks Hi I added Youtube Vanced on Screen2Auto Application you add must support Android Auto. Those application authors should include special features there for display on car screens. YouTube is not such an application. However, you can install S2A, which will mirror the screen of your smartphone and launch YouTube on it. Attention! You can download and install S2A on devices without root using the new application Android Auto Apps Downloader (AAAD) or from the developer's site Screen2Auto P.S. However, I still recommend using C2A on rooted devices since it is not known how long it will work without root. A new version 3.5.2 beta has been released! Last edited: May 4, 2021 Reactions: mntr86 Attention! Means on Non-Root device S2A will work too? I tried v3.5.2 on NonRoot device but it doesn't work - on Android Auto app not display S2A apps Last edited: May 4, 2021 Hello. i installed the app via AAAD. everything ok, I can start the app and those on the phone, if I have a black screen I close s2a from the drop-down notification and then everything from the smartphone. my phone is a Xiaomi mi9 GREAT!! S2A is working again in my Galaxy A40 (rooted and Android 10), including touch screen. I downloaded the Magisk SU-Connector module and loaded it into my phone with TWRP. Then installed that module in Magisk SU-Connector module Samsung Galaxy A40 on Android 10 S2A: 3.4.6 (I do not dare to install the lattest beta) AA AIO Tweaker: 4.0.2 AA: 6.3.611324 Magisk: 22.1 Google play Services: 3.4.621.12.13 I hope this thime it keeps on working for a long time. Reactions: BOUBOUNOFEAR Means on Non-Root Device S2A will work too? I tried v3.5.2 on NonRoot device but it doesn't work - on Android Auto app not display S2A apps Yes

of course (not perfect, but works). But in order for S2A to work on devices without root, it must be installed by this or this way. Installing in the traditional way will do nothing. Has anyone tested if update version 3.5.2 beta the touch interface working installed S2a via AAAD (NO ROOT). I click on the display (android auto) of the car the screen2auto app and see the S2A home page but as soon as I start any app selected by me via the touch of the car, a black page appears. I have seen that many people have this problem. honor 10 no root Screen2auto v. 3.5 AAAD last version you have link SU-Connector? GREAT!! S2A is working again in my Galaxy A40 (rooted and Android 10), including touch screen. I downloaded the Magisk SU-Connector module and loaded it into my phone with TWRP. Then installed that module in Magisk SU-Connector module and loaded it into my phone with TWRP. Then installed that module in Magisk SU-Connector module and loaded it into my phone with TWRP. Then installed that module in Magisk SU-Connector module and loaded it into my phone with TWRP. Samsung Galaxy A40 on Android 10 S2A: 3.4.6 (I do not dare to install the lattest beta) AA AIO Tweaker: 4.0.2 AA: 6.3.611324 Magisk: 22.1 Google play Services: 3.4.621.12.13 I hope this thime it keeps on working for a long time. can you share link Magisk SU-Connector? thanks Page 17 I installed S2A in Xiaomi Mi10 without root, but a black screen is displayed at start. Someone with same problem?

workaround for this? Just tested this on my unrooted Note 10+ and HUR on a tablet. First run was black screen on a game, then it worked fine, video is fast, but touch is horrible. doesn't drag right, pushes buttons when you release. I will test on my real HU tomorrow, but very excited about this if it can get cleaned up. Hi, I have exactly same problem - Huawei P30 without root, Screen2Auto installed thru AAAD. The mirror start but the apps not works, i have black screen with only floating button... Is any workaround for this? i tried and tried re-installing S2a as soon as i connect to the car display i see all the apps but when i select any app --- black screen with only floating button... Is any workaround for this? i tried and tried re-installing S2a as soon as i connect to the car display i see all the apps but when i select any app --- black screen with only floating button... app, mostly works wonderfully. Touch is a bit finnicky, since dragging doesn't work unless you can find a spot on the screen completely without UI elements. Makes list scrolling, selections, etc. impossible Also, is there any way automate the confirmation of "Start"? It's annoying having to accept this on the phone every time. Reactions: BOUBOUNOFEAR Thank for this amazing app!!! Can you help to make S2A start automatically after AA connected (by Tasker or someway else)? Thank in advanced Great app, mostly works wonderfully. Touch is a bit finnicky, since dragging doesn't work unless you can find a spot on the screen completely without UI elements. Makes list scrolling, selections, etc. impossible Also, is there any way automate the confirmation of "Start"? It's annoying having to accept this on the phone every time. Maybe the dev could add scrolling commands to the touch assistant button if the touch assistant

DPI/Resolution and lack of root to set them. Of course touch is also pretty hard to manage. This has a lot of potential and I hope some of these issues can be resolved. Hi, I have exactly same problem - Huawei P30 without root, Screen 2Auto installed thru AAAD. The mirror start but the apps not works, i have black screen with only floating button... Is

Hi, i installed this app using aaad. I have a Huawei p30 pro without root, Screen with only floating button Hi, I have exactly same problem - Huawei p30 pro without root, Screen with only floating button... Is any

In video the test the setting on it!! I have install it with AAAD IN no root samsung s9+ and work very good. In video the test the setting on it!! how did you get it fullscreen without root? Page 18 So I switched the DPI/Resolution on AA to get from side toolbar to bottom toolbar which then gives more width for my mirrored display which thin let's it display fullscreen;-) It was a screen ration issue. Not it works well except for the touchscreen dragging issue. Just going to chime in that I have a Moto G Stylus running android 11 (Non rooted). Installed via AAAD and when I click on the icon in Android Auto, I get the launcher. When I click on any app I also get the black screen. Will wait for a solution. Thanks. Hi guys, I have installed this app in three different rooted phones (Xperia 5 II, One Plus 8 and Xiaomi Mi 11), I dont' know why but when I click on the icon in Android Auto, I get the launcher. When I click on any app I also get the black screen. Will wait for a solution. Thanks. Hi guys, I have installed this app in three different rooted phones (Xperia 5 II, One Plus 8 and Xiaomi Mi 11), I dont' know why but when I click on the icon in Android Auto, I get the black screen. Will wait for a solution. reboot by themselves, Xiaomi Mill has no problem, some one have the same issue? Hi, s2auto Is not showing in launcher listbox: sort application by name. Ask for support: xiaomi mill has no problem, some one have the same issue? Hi, s2auto Is not showing in launcher listbox: sort application by name. Ask for support listbox: sort application by name listbox: sort application by name. Ask for support listbox: sort application by name listbox: sort a disabled all battery optimization for app, given all permission, given the app the permission to start automatically. Do you have any hint? Thank you. E. Just going to chime in that I have a Moto G Stylus running android 11 (Non rooted). Installed via AAAD and when I click on the icon in Android Auto, I get the launcher. When I click on any app I also

get the black screen. Will wait for a solution. Thanks. Just a thought as I had this issue with my note 10+ when I first started. If you leave the settings to dim your phone you may not see the allow recording popup that comes up when you launch the app from the launcher. I wish there was a way to remember this option. Sometimes I see this on the headunit but more often than not it's only on the phone and you get black screen until you allow it. I had to tell s2a not to dim my screen on my phone. Maybe S2A could not dim until it get told it's allowed to stream? I've managed to get s2a working on my non rooted s20 ultra. Installed via AAAD. As others have said the phone screen dims and you have to select start screen recording. Once done on the s2a applications screen on your AA head unit swipe to the right a few times, past the clock and notifications. There are some settings toggles at the top. Click on s2a start and it changes to paused. Just press again to start and you will see your phone screen on the AA unit. Touch even works albeit a bit hit and miss. Also crashes if you try to do too much things but have shortcuts setup to favourite apps.

I personally use Torque with no problems. Sorry can't do screenshots yet but if someone needs Will be able to provide later. Reactions: Gioi58 I have install in a nexus-5x many custom roms, lineage etc.. With android auto there are problems. Some times it does work everything ok until some day Google changes something in gaps and something stopping working. I installed a nougat rom based to original, debloated it to the limit just to have android auto working and some more others i need. It is best way...

any workaround for this? I had the same issue on my rooted Poco F2 Pro. Allowing FullScreen-Mode in settings -> apps --> S2A --> advanced settings helped me. Reactions: bolek007 I have install it with AAAD IN no root samsung s9+ and work very good.

This requires access to system files need a root You need to add an application to S2A Launcher on your smartphone. Then it can be run.

You don't actually gain anything upgrading to android 10, at least for android mirroring. In older versions like nougat, mirroring works better. Was your Nexus 5X blod patched? I assume if it wasn't then a BLOD patched one wouldn't stand a chance at running this. In the new video in start screen2auto after update on android 6.4.xx in samsung s9+ with Andrid 10 the touch not work. The phone connected ti USB use the hotspot

of the other One. I flagged the option of s2echo and selected the wifi name. I have installed screen2auto and it works flawless except for one thing and that's navigation within opened apps. When I open for example Netflix it doesn't let me scroll the page but directly opens the link/video you just tapped when you actually wanted to scroll down. Only way to navigate is to go back to my phone. This isn't the case in the app itself when you browe your apps but only in the opened app on your car screen. Any solution for this? Ask for a couple of improvement: S2a Launcher: sort icon + hide icon Quick Launcher listbox: sort application + search application by name. Ask for support: xiaomi mi 10t pro not rooted sometime screencast not start. I've disabled all battery optimization for app, given all permission, given the app the permission to start automatically. Do you have any hint?

I actually have seen that streaming permission and click start but still do not end up seeing anything on my head unit. So I just found this, use at your own risk, you are granting this app permission to start screen recording without prompting. No root required. adb shell appropriate appropriate to start but still do not end up seeing anything on my head unit. So I just found this, use at your own risk, you are granting this app permission to start screen recording without prompting. on my Note 10+ running android 10 and there are no more prompts to allow recording when you start s2a. to undo it: adb shell appops set ru.inceptive.screentwoauto PROJECT MEDIA ignore Again, I'm just giving you the command, whether you trust s2a is up to you

réellement faire défiler vers le bas. La seule façon de naviguer est de revenir à mon téléphone. Ce n'est pas le cas dans l'application ouverte sur l'écran de votre voiture. Une solution pour ça? J'ai installé screen2auto et cela fonctionne parfaitement, sauf pour une chose et c'est la navigation dans les applications ouvertes. Lorsque j'ouvre par exemple Netflix, cela ne me permet pas de faire défiler vers le bas. La seule façon de naviguer est de revenir à mon téléphone. Ce n'est pas le cas dans l'application elle-même lorsque vous accédez à vos applications, mais uniquement dans l'application ouverte sur l'écran de votre voiture. Une solution pour ça? hello, to be able to scroll through the netflix menu I uninstall the beta version of S2A and download version 3.4.6 ... because it works perfectly. hope it will be the same for you. bonjour, pour pouvoir faire défiler le menu netflix, je désinstalle la version 3.4.6 ... car elle fonctionne parfaitement. espérons que ce sera la même chose pour vous. Last edited by a moderator: May 13, 2021 I installed Screen2Auto on an unrooted phone using the script from the Inceptive.ru website. There are a few glitches but it works overall. Would Screen2Auto work better on an unrooted phone if I used AAAD to install it? Also, since I've installed Screen2Auto and have it work? Or do I need to install an updated version using the script? Last edited: May 13, 2021 Reactions: thakki Page 19 All AAAD does on a non rooted is make it show in AA, if you ran the adb command and it worked then that's it. Cant speak to how the update will my car's touchscreen (Chevy MyLink) but using the car's touchscreen within an app is clunky and inconsistent when running Screen2Auto on an unrooted Galaxy S7. I've tried enabling "Alternative touchscreen more responsive within an app? Reactions: dumbino 67 I got a New phone (Moto Ace 5G) and installed Screen2Auto exactly like I did on my G Stylus. "Installed the latest Android Auto(6.1.610544) and enabled developer mode, checked unknown sources box. Installed Screen2Auto 3.4.6 and went to Other setting and Clicked the AA Unlock. Reboot phone. (I had issues with this option not being available/not doing anything on my Moto G stylus phone.) Select apps you want too show up in Screen2 auto settings. Then installed AA Phenotype patcher, selected screen2auto in apps, and Patched, reboot." When I click Screen2Auto on my Car Stereo it opens and just says "No messages during this drive" Doesn't show any apps to select or anything to open? Reactions: Simien and thakki What is this SU Connector for? There is a Magisk Update to V23. Does anyone know if S2A works with Magisk 23.0? Touchscreen works on S2A launch an app. After Android Auto loads I click on Screen2Auto icon and S2A appears correctly. Then I can use the touchscreen of my car display to launch an app, for example I click on MX Player,

but after the MX Player app is started I can't use touchscreen of my display car anymore! Touchscreen of the car becomes not responsive (only except for S2A round button). It have to control all the functions by my smartphone only. Same issue with any other app. ->After installing the SU Connector app. I can use the apps that are in great S2A eg: MX Player, navitel, youtube vanced .... I asked because first time i've istalled s2a throught aaad everything worked fine touchscreen included and now the touchscreen is untouchable (no scroll down only touch).ciao thanks. it's a shame. I asked because first time i've istalled s2a throught aaad everything worked fine touchscreen is untouchable (no scroll down only touch).ciao That's strange as you should need root to get the touch control your saying you saw. With root touch works fine. Can anyone tell me why screen2auto, aamirror etc are showing 'No new messages in in this drive' on car screen instead of mirrored screen? Screen recording permission alert does not appear on phone screen either. I am on Android 11, AA 6.3, Realme UI 2.0. please help. Hi, i have same issue, but the message is no new messages during this drive. Im using aaad s2a, no root, note20, how to fix? Hello Uksus17, it works very fine on my HTC U11 unrooted. Great Job. I support your work and hope you stay tuned. greetz dipsy Do I need to disable passcode on my phone? When I open screen2auto it shows the passcode login screen without root? yes, s2a is a screen recorder it only shows what's being displayed on the phone. I use samsung smartlock on my note 10+ so when BT is connected to the car samsung ships the lock screen. I have the same problem as many, I read the whole thread without finding the solution, if anything there will be, phone huawei mate 20 pro, no root because huawei does not release the codes to unlock the bootloader, installed s2a via adb, everything works, even the touch in the s2a launcher but once I open an application the touch stops working, I can only control from the phone and not from the screen in the screen in the car. Has anyone found a solution to this? without root? yes, s2a is a screen recorder it only shows what's being displayed on the phone. Options depend on phone.

I use samsung smartlock on my note 10+ so when BT is connected to the car samsung skips the lock screen. And this works for you? I have re regular Note10 and Smart Lock maybe works one in ten times. And this works for you?

I have re regular Note10 and Smart Lock maybe works one in ten times. My smartlock with BT works 90%, location based one is useless. I agree it's stupid samsung cant get this working 100%, but it works enough that I use it. Also I only use s2a for certain needs as I have full Android HU. HU has it's own google account for security reasons so I use s2a when I need something from my main google account. Dear all, I'm trying since 3 days to get screen2auto running on my non-rooted Oneplus 7T. Tried with AAAD and adb method from inceptive.ru but screen2mirror never shows up in my car. I only installed screen2auto on the phone, started it and after that connected it via USB to the car. Am I missing something? I read about "AA Unlock" in screen2auto, but I even don't know what to do on this setting page... Sorry for the basic question, but 

to AA setting and enable developer settings and turn on unknow sources. Did it, and now icon appears in menu but after click on it there is only information that: No new messages in in this drive. No request on the phone about recording permission. S10Lite, AA 6.3.xxx Hi, i installed the following app on my HUAWEI P SMART 2020 - EMUI 9.1.0.367: AAAD 1.4 Screen2Auto 3.5.3 beta Android Auto 6.3 iGO NEXTGEN ISRAEL v 9.18.27.687519 Skin Pongo 21 May 2020 i want to use iGo on my Renault Clio IV (versione 2017) equipped with a MediaNav system If i select on the Me Page 21 Did it, and now icon appears in menu but after click on it there is only information that: No new messages in in this drive. No request on the phone about recording permissions? There may be others I don't remember. Hello!, i have been trying to get it working with my

vehicle however my vehicle, Mazda 3 (2020), does not use a touch screen and only the Mazda knob and No one seems to know if a knob can be used.

thank you Hello!, i have been trying to get it working with my vehicle however my vehicle, Mazda & (2020), does not use a touch screen and only the Mazda knob and No one seems to know if a knob can be used. I am wondering if there is any option or alternative to make it work. thank you 90% of android apps don't support keyboard navigation so even if you mapped the knob to arrow keys it would be nearly useless. Only real option is to use your phone as the touchpad for your HU. I'm amazed you can even se AA apps without touchscreen. Sorry everyone!!! But how can i install s2a with aaad? It's only redirects me to s2a download page Sorry everyone!!! But how can i install s2a with aaad? It's only redirects me to s2a download page Hi all! is there any fix for AA6.4? unfortunately google forced me to update AA from 6.3 to 6.4 and since then my S2A stopped working; I've only black screen when launching app from the s2a launcher.

Hi all! is there any fix for AA6.4? unfortunately google forced me to update AA from 6.3 to 6.4 and since then my S2A stopped working; I've only black screen when launchers from AA 6.4 then that's likely not your issue. out of curiosity how did google "force" you to update? Hi all! is there any fix for AA6.4? unfortunately google forced me to update AA from 6.3 to 6.4 and since then my S2A stopped working; I've only black screen when launching app from the s2a launcher. also AAmirror stopped working; I've only black screen when launching app from the play store, disable automatic refresh. Hey Everyone! I have installed S2A 3.5.3 using AAAD on my Pixel 3 with Android 11 no root, AA version 6.3.611334 - it seems to be working fine as it opens up, can open some apps but then touch doesn't work inside the app - I am able to control the S2A button, double tap to go back to launcher, but cannot do anything in the open application - do you know about any kind of possible fix for that? Many thanks! Hey Everyone! I have installed S2A 3.5.3 using AAAD on my Pixel 3 with Android 11 no root, AA version 6.3.611334 - it seems to be working fine as it opens up, can open some apps but then touch doesn't work inside the app - I am able to control the S2A button, double tap to go back to launcher, but cannot do anything in the open application - do you know about any kind of possible fix for that? Many thanks! OK Nevermind: I was testing this "Alternative touch" setting before, but apparently I didn't turn on the accessibility permission correctly last time - Now I can confirm that with this Alternate touch I can use S2A fully without root Too bad it's a little glitchy and scrolling is a nightmare - you cannot scroll when touching any kind of UI element since it will auto click it (and for some apps like standard SMS messages app it's impossible to scroll since entire screen is built with "buttons" to go to specific conversation). Nevertheless app is great and so

much fun, kudos to the author! Nevertheless app is great and so much fun, kudos to the author! My unrooted Galaxy S7 works similarly with alternative touch enabled. My rooted LGG2 worked a lot better with S2A but I had other problems. I'm facing issue after installed S2A my Google Chrome browser tab group layout has been changed as the attached picture. Log has been sent, my device ID 212607a09... Need some help, I was using \$2a might solve the problem, but I can't launch it remotely, and do not have access to touchscreen, what can I do I'm completely lost Hi I have a Samsung s9+ android9 Screen2auto was working fine. Since few months ago, when connecting and executing screen2auto, touchscreen is not responding, i can only move and click/tap on the floating button, touch screen just touch without scroll. but I have another problem, when I open youtube I have another problem.

have a black screen but the audio is reading, and when I go directly to the device I have the video and the audio anyone can help me please Hi, I've the same probleme of all for touchscreen just touch without scroll. but I have another problem, when I open youtube I have a black screen but the audio is reading, and when I go directly to the device I have the video and the audio anyone can help me please The touch issue is known issue with non-root phones. The youtube issue is due to DRM in the app no allowing the screen capture. Happens for me on almost all commercial video apps. The touch issue is known issue with non-root phones The youtube issue is due to DRM in the app no allowing the screen capture. Happens for me on almost all commercial video apps. I'm root with magisk 20.4, touch not work without the secondary system in other parameters, Youtube worked perfectly 2 months ago Last edited: May 30, 2021 For those of you not able to use the touchscreen with Magisk > 20.4 : Go to s2a settings Other settings Tick "Automatic shutdown of SELinux" This workaround worked flawlessly for me (thanks to the awesome developer). For those of you having screens with punch holes and notches, use this Magisk module, then apply it via Developer options > Notch. Use the custom settings for your device, do not

install the ones for Pixel and OnePlus if you don't have one. Different settings will be available from the Developer options for you to try. See screenshot from my Moto G8 Power on CrDroid 11 (sorry for the blurriness, I'm using the Desktop Head Unit emulator on my computer in order to avoid going back and forth to my car for testing). I'm using Extras for AA with Substratum in order to reduce the navbar size. I have a big (and strange) issue. 2 streaming apps (Raiplay and Mediaset Infinity) have a working audio in S2A only if: a) option "Audio Priority on Connection" is ON (mandatory otherwise I have no audio at all) b) NO other streaming apps (Raiplay and Mediaset Infinity) have a working audio in S2A only if: a) option "Audio Priority on Connection" is ON (mandatory otherwise I have no audio at all) b) NO other streaming apps (Raiplay and Mediaset Infinity) have a working audio in S2A only if: a) option "Audio Priority on Connection" is ON (mandatory otherwise I have no audio at all) b) NO other streaming apps (Raiplay and Mediaset Infinity) have a working audio in S2A only if: a) option "Audio Priority on Connection" is ON (mandatory otherwise I have no audio at all) b) NO other streaming apps (Raiplay and Mediaset Infinity) have a working audio in S2A only if: a) option "Audio Priority on Connection" is ON (mandatory otherwise I have no audio at all) b) NO other streaming apps (Raiplay and Mediaset Infinity) have a working audio in S2A only if: a) option "Audio Priority on Connection" is ON (mandatory otherwise I have no audio at all) b) NO other streaming apps (Raiplay and Mediaset Infinity) have a working audio in S2A only if a like infinity is option to the same and th used before the above mentioned apps If, in the current S2A session, these "rules" are not respected, audio from those 2 apps is missing (video is 100% ok though). A stupid workaround is to use Netflix/Prime in Picture mode and then open the problematic apps again: audio is working but of course it overlaps to the Netflix/Prime audio. If I close the small picture of Netflix/Prime, after 3-4 seconds the update to 6.4 of android auto and unfortunately, even if I uninstall the update and stay with 6.3, it force me to make the update otherwise AA doesn't even start. Anyone knows how to roll back to a previous version and avoiding android to force you to make the update? un Hey Everyone! I have installed S2A 3.5.3 using AAAD on my Pixel 3 with Android 11 no root, AA version 6.3.611334 - it seems to be working fine as it opens up, can open some apps but then touch doesn't work inside the app - I am able to control the S2A

button, double tap to go back to launcher, but cannot do anything in the open application - do you know about any kind of possible fix for that? Many thanks! unfortunately as I posted here above, if I uninstall the update I can't run AA anymore...it always asks for the update to be installed...any workaround for that? if the app still shows and launches from AA 6.4 then that's likely not your issue, out of curiosity how did google "force" you to update? launching AA settings from my phone settings it appears on the bottom of the screen "please update Andorid Auto" and if I skip it the app closes...there no way to launch it without making the update Wipe the old AA and install the 6.3.xxx AA. In the play store, disable automatic refresh. as I said, it doesn't work like that...it's no longer possible to use the old version since as soon as I run AA it shows up a pop up asking for the update...It's no longer possible to use the old version since as soon as I run AA it shows up a pop up asking for the update ... If I cancel, the app cloeses itself and there's nothing else I can do to avoid it... That's odd, I'm still running 6.3 on my Note10+ and while yes the update is sitting in the playstore, I just ignore. I have a big problem, when I see a video and I get a phone call, once If I insert mute (eliminating the audio from the video) the video is seen at normal speed eliminating the slow motion effect that reappears once the audio is re-inserted by eliminating the mute.

hi all. I have a big (and strange) issue. 2 streaming apps (Raiplay and Mediaset Infinity) have a working audio in S2A only if: a) option "Audio Priority on Connection" is ON (mandatory otherwise I have no audio at all) b) NO other streaming apps (Raiplay and Mediaset Infinity) have a working audio in S2A only if: a) option "Audio Priority on Connection" is ON (mandatory otherwise I have no audio at all) b) NO other streaming apps (Raiplay and Mediaset Infinity) have a working audio in S2A only if: a) option "Audio Priority on Connection" is ON (mandatory otherwise I have no audio at all) b) NO other streaming apps (Raiplay and Mediaset Infinity) have a working audio in S2A only if: a) option "Audio Priority on Connection" is ON (mandatory otherwise I have no audio at all) b) NO other streaming apps (Raiplay and Mediaset Infinity) have a working audio in S2A only if: a) option "Audio Priority on Connection" is ON (mandatory otherwise I have no audio at all) b) NO other streaming apps (Raiplay and Mediaset Infinity) have a working apps (Raipla these "rules" are not respected, audio from those 2 apps is missing (video is 100% ok though). A stupid workaround is to use Netflix/Prime in Picture in Picture audio. If I close the small picture of Netflix/Prime, after 3-4 seconds the audio

goes off... try to insert mute and then remove mute afterwards. you will see that you will hear the audio by regaining the audio priority. as I said, it doesn't work like that...it's no longer possible to use the old version since as soon as I run AA it shows up a pop up asking for the update...If I cancel, the app closese itself and there's nothing else I can do to avoid it... I'm still running AA version 5.9.604644-release. Doesn't try to make me update. Had this earlier and worked flawless. On android 11 and this tike I don't have the icon in AA. When I go to setting the notification that super user was granted keeps flashing. Not sure if it's just me, but I can no longer get to the developers website. Cheers, B.D. The SU connector magisk app did the trick to get touch working again on my Redmi Note 5 Pro with the latest version of Magisk. (MIUI12 Android 9 w/root) Still trying to find a way to make DRM apps such as Netflix and Amazon Prime work on the vehicles screen, but everything else is working nicely. Torque and some plugins for it along with my Bluetooth OBD2 module have been fun to play with. YouTube Vanced works just fine too, for those of you having issues with the stock YouTube Music Vanced with tablet mode turned on in vanced settings works extremely well too. Page 24 Remember to install it via TWRP Hello together, I installed on my Gigaset GS4 with Android 10 without root. I can see the Screen2Auto app on Android Auto in my car. Unfortunately there are no Apps available when I open Screen2Auto. Can someone please explain, what I'm doing wrong? Thanks I updated the Google app, not Android Auto, and now it forces me to update Android Auto and screen 2 auto doesn't work.

May see if I can reinstall an older Google app. Hi I've got a weird issue that's just started so not sure if it's an update that's caused it. So when I connect my phone to the ford connect my phone and it shows the apps I want. Then mirrors phone. You Tube plays fine on the screen and so does anything else Netflix plays on my phone but on the ford screen it's just black. Weirdly it shows the Netflix controls for next pause etc. I can even hear audio fine. Also even shows the age disclaimer when something starts. How do I fix this? I have tried to unpatch then re patch apps. No luck. I have tried to unpatch the no luck. I have tried to unpatch apps. No luck. I have trie was an update yesterday. Pic added Salve, ho un problema strano che è appena iniziato, quindi non sono sicuro che sia un aggiornamento a causarlo. Quindi non sono sicuro che sia un aggiornamento a causarlo. Quindi non sono sicuro che sia un aggiornamento a causarlo. Quindi non sono sicuro che sia un aggiornamento a causarlo. Quindi non sono sicuro che sia un aggiornamento a causarlo.

Quindi rispecchia il telefono. YouTube funziona bene sullo schermo e così fa qualsiasi altra cosa Netflix funziona sul mio telefono ma sullo schermo Ford è solo nero. Stranamente mostra i controlli Netflix per la prossima pausa ecc. Riesco persino a sentire l'audio bene. Mostra anche il disclaimer sull'età quando inizia qualcosa. Come posso risolvere questo problema? Ho provato a rimuovere la patch e poi a correggere l'app. Senza fortuna. Ho provato l'opzione di Correzione di Netflix sull'app2a senza fortuna. La versione di Netflix in cui mi trovo è la versione 7.107.0 build 5 35497. Il telefono è su Android 11, ma come ho detto non ho mai avuto problemi con Netflix fino a ieri. E non credo ci sia stato un aggiornamento ieri. Foto aggiunta Sorry but SCREEN2AUTO still works for you today? you can tell the technologies you have, thank you Scusa ma SCREEN2AUTO ti funziona ancora SCREEN2AUTO ti funziona ancora oggi? puoi dire le tecnologie che hai, grazie Last edited by a moderator: Jun 19, 2021 Google forces me to update Android Auto to 6.5. Hello together, I could roll back to Android Auto 6.3. I'm using Screen2Auto 3.5beta (from AA Store). Version 3.5.5 does not work for me. In my Renault it works perfectly. With GM's Mylink, the apps of Screen2Auto opens up on the car stereo and immediatley closes. Afterwards I have to restart the phone. Can someone help? @Uksus17 What does the option "request audio focus on connect" mean? What does this option do? EDIT: can you also please explain how to change the resolution? Is it possible to have the navigation bar with the 3 buttons right now on the right side. Thank you very much. Hi. I have tried everything but Netflix still shows a black screen with only the audio playing. I am now running a new android 11 ROM clean install. Latest gapps. Touch screen etc all work and on other apps like YouTube or cruncyroll I can see video. Just Netflix that's not working.

Any solutions please. MIne started whining about a required update "soon". I suspect if I roll back google play services then it will not force the update, but not going to mess with it until I have to.

Hi, My Phone (Not Root) /Car forces update Android Auto to newer version (6.4 Up) then Car Stream doesn't work anymore Is there any solution? Is there anyway to force Not Auto Update Android Auto? Thanks Android auto 5.9.604634 - it's no longer possible to use the old version since as soon as I run AA it shows up a pop up asking for the update...If I cancel, the app cloeses itself and there's nothing else I can do to avoid it... Google forces me to update Android Auto I don't want help me View attachment 5343707 same as me, after AA update to 6.5 - Screen2Auto & CarStream not working anymore (Phone without Root) ah someone happens to him that after installing magisk 23 in android 11 with ui 3.1 the usb died? I do not connect the phone with usb to the computer it does not recognize me, nor in the car, I have to restart the phone, you counted every time I want to connect it to detect it, does anyone know a solution? for this the usb is very annoying, having to restart every time you want to connect it somewhere fixed: go back to android 10 the problem was android 10 the problem was android 10 the problem.

despues de instalar magisk 23 en android 11 con ui 3.1 el usb murió? No conecto el telefono, contabas cada vez que quiero conectarlo, alquien sabe alguna solucion? para esto el usb es muy molesto, teniendo que reiniciar cada vez que

quieras conectarlo en algún lugar solucionado: volver a android 10 el problema era el android 10 ui 2.3 magisk 23 funciona todo el touch tambien Last edited by a moderator: Jun 25, 2021 Hello. Google banned the android drive. Therefore, AAAD installed programs do not work. But!!!!! I had an old, spare phone (Huawei mate 20) that I hadn't used for half a year, so it didn't even update any apps. I installed the AAAD program and the carstream program. Working perfectly. So if you have an older phone that you have an older phone that you haven't updated, install the AAAD program, download the one program you want, and use it as before. If you have a month since getting the Moto Ace 5g. Screen2Auto still works on it! Haven't updated any apps on it recently. So what app update is now forcing the Android Auto. You can uninstall updates to Google Play Services in Settings/Apps, but then it tried to update on its own which I canceled. It also gives a notification that Messages will no longer work until you update Google Play Services. To fix that I made a copy of the Google Play Services apk from my Moto Z3 Play, version 21.15.15. Went back in to Screen2Auto app and applied the AA Unlock and reinstalled AA and reinstalled 6.4 version. Now it loads up Android Auto and lets me select Screen2Auto again, with video apps working. I did notice Netflix video is black, may try the Magisk DRM removal prop later,. We'll see how long this lasts, I still mainly use my jailbroke iphone SE(2016) with the Magisk DRM Removal module. My phone stuck in a bootloop after I installed it. Tried for over an hour to fix it with adb commands and TWRP recovery(touchscreen wouldnt work.) Phone ended up wiping somehow, so now I'm recovering from an Android backup. Last edited: Jun 28, 2021 Reactions: sosimple Page 26 On a similar note, I just tried my Z3 Play which I hadn't used in over a month since getting the Moto Ace 5g. Screen2Auto still works on it! Haven't updated any apps on it recently. So what app update is now forcing the Android Auto to update. Z3 play still has AA 6.1 I'll try to find out as I need it to work on the Ace 5g my main device Edit: Got it working Again!! Google Play Services is the culprit making you update Android Auto. You can uninstall updates to Google Play Services in Settings/Apps, but then it tried to update on its own which I canceled. It also gives a notification that Messages will no longer work until you update Google Play Services apk from my Moto Z3 Play, version 21.15.15. Went back in to Screen2Auto app and applied the AA Unlock and reboot phone. It wanted to update Android Auto when I plugged it in to my car, had AA 6.1, so I uninstalled AA and reinstalled AA and reinstalled AA and reinstalled 6.4 version. Now it loads up Android Auto apair, with video apps working. I did notice Netflix video is black, may try the Magisk DRM removal prop later,. We'll see how long this lasts, I still mainly use my jailbroke iphone SE(2016) with Carplayenable because it works better and is fullscreen, but nice to have this back working!! Edit2: CAREFUL with the Magisk DRM Removal module. My phone stuck in a bootloop after I installed it. Tried for over an hour to fix it with adb commands and TWRP recovery(touchscreen wouldnt work.) Phone ended up wiping somehow, so now I'm recovering from an Android backup. My issue is the Netflix black screen. So at least I know it's not the android auto version that causes the black screen. I have tried the DRM prop. Su connector. And in the aa tweaker app I've done all right. Even applied the Netflix fix. Still no luck. Netflix and Amazon prime have black screen. YouTube works fine. I'm really stumped . Any suggestions? Havoc os android 11 Poco F1. Root with latest magisk 23 Android auto Version 6.5.612134-release Everything shows up fine in terms of aa loading and screen mirroring works too. Weirdly enough cruncyroll works first time. I have more questions: how do I start Tasker tasks with s2a resp. s2a close? Both commands do not work. Thank you. After wiping my phone (Moto Ace 5g) I've reinstalled Screen 2Auto and Android Auto 6.4. It IS Working again, and Google Play Services is updated to the latest 21.21.16 So maybe not what was forcing AA update?? Netflix may have patched something to block video, it has never worked for me on Screen2Auto. Now I'm getting the annoying "exposing sensitive information while casting" notification everytime you open an app in Screen2Auto and you have to click OK on the phone. I tried this before Anyone Know? See page 70 So I just found this, use at your own risk, you are granting this app permission to start screen recording without prompting. No root required. adb shell appops set ru.inceptive.screentwoauto PROJECT MEDIA allow I just tested this on my Note 10+ running android 10 and there are no more prompts to allow recording when you start s2a. to undo it: adb shell appops set ru.inceptive.screentwoauto PROJECT MEDIA ignore Again, I'm just giving you the command, whether you trust s2a is up to you. My issue is the Netflix black screen. So at least I know it's not the android auto version that causes the black screen. I have tried the DRM prop. Su connector. And in the aa tweaker app I've done all right. Even applied the Netflix fix. Still no luck. Netflix and Amazon prime have black screen. YouTube works fine. I'm really stumped. Any suggestions? Havoc os android 11 Poco F1. Root with latest magisk 23 Android auto Version 6.5.612134-release Everything shows up fine in terms of aa loading and screen mirroring works too. Weirdly enough cruncyroll works lol. No prompts to update. Works first time. same to me POCO X3 PRO all apps work fluently just NETFLIX sound but black screen NO matter what I've done you start PowerShell as Admin? I guess that Did work even though I got that error. Tried again when I left home, now it's working and Not giving me that popup. Thanks! So No Video on Netflix, Prime, Hulu, Espn, etc... But those don't work on my iphone jailbroke with carplayenable either. At least My IPTV apps and YouTube play Video. Last edited: Jun 29, 2021 My issue is the Netflix black screen. So at least I know it's not the android auto version that causes the black screen. I have tried the DRM prop. Su connector. And in the aa tweaker app I've done all right. Even applied the Netflix fix. Still no luck. Netflix and Amazon prime have black screen. YouTube works fine. I'm really stumped. Any suggestions? Havoc os android 11 Poco F1. Root with latest magisk 23 Android auto Version 6.5.612134-release Everything shows up fine in terms of aa loading and screen mirroring works too. Weirdly enough cruncyroll works first time. no prompt to update because you already have AA 6.5. for your info Prime video has never worked in the past. not in the app but the mute button that you find on the car stereo or on the steering wheel. I tried your suggestion with no luck. I mean to say: when switching from app such as Dazn, Netflix, Prime (all working well) to Raiplay or Infinity the volume is forced to 0 and the "mute" function of HU seems unresponsive! It seems that these apps (in the S2A environment) are not able to get audio focus.... Hello everyone for all those who have Magisk 23, screen2auto 3.5.5, android auto 6.5 and the touch does not work, you have to install the SU\_connector.zip module on magisk and the touch works again. (WITH ROOT) Hola a todos para todos aquellos que tienen Magisk y el touch vuelve a funcionar. (AVEC ROOT) site for the download of SU\_connector.zip Last edited: Jul 6, 2021 HI at all, do anyone know, if it is planned to improve touch sensibility on the car/nav screen? Maybe a higher time for finger touch would solve the sensitivity issue. Greets, SchaafBaeh Found a temp solution: uninstall Google Play service & Not Auto update Then Screen2Auto & others app work new version available 3.5.6 The only way (similar method from the Fermata player thread) I found to overcome the problem for now is: - Use Android Auto version 7.0.614104 (tried v7.1.614554, it does not work in any way). - Rename the Screen2Auto app v3.6.2 (change the ru.inceptive.screentwoauto name) with Lucky Patcher or any other rename apk app. - Uninstall the original Screen2Auto and install the renamed one. - Enable Unknown Sources

install. Il try with your apk Reactions: jimikoukou coooll, for the moment works fine... thank you. Lucky Patcher actually calls it "Cloning". There are also other apps like ApkRenamer and Apk Editor Pro, but haven't tried them. An example of cloned app, that has been renamed to ru.inceptive.screentwoautp using Lucky Patcher clone operation ("p" instead of "o" at the end) (\*\* I'm not responsible if Lucky Patcher has injected anything malicious in the apk, I hope not, I'm also using the apk \*\*): Working so far. Good work, thanks again. The only way (similar method from the Fermata player thread) I found to overcome the problem for now is: - Use Android Auto version 7.0.614104 (tried v7.1.614554, it does not work in any way). - Rename the Screen2Auto hasn't disappeared yet. @wyt18 Link please. Thank you very much. Excellent, working. Thank you very much for sharing!. The only way (similar method from the Fermata player thread) I found to overcome the problem for now is: - Use Android Auto version 7.0.614104 (tried v7.1.614554, it does not work in any way). - Rename the Screen2Auto app v3.6.2 (change the ru.inceptive.screentwoauto name) with Lucky Patcher or any other rename apk app. - Uninstall the original Screen2Auto and install the renamed one. - Enable Unknown Sources on AA and patch/add the newly renamed app v3.6.2 (change the ru.inceptive.screentwoauto name) with Lucky Patcher or any other rename apk app. - Uninstall the original Screen2Auto and install the original Screen2Auto app v3.6.2 (change the ru.inceptive.screentwoauto name) with Lucky Patcher or any other rename apk app. - Uninstall the original Screen2Auto and install the original Screen2Auto app v3.6.2 (change the ru.in

on AA and patch/add the newly renamed app to AA with AA IO Tweaker as you normally would. I tried turning off/on the car, disconnected and rebooted the phone, Screen2Auto hasn't disappeared yet. 8 pro no ROOT (with android 11) everything is fine but when i run app i have black screen on AA. I can't find how to allow screenshot on this smartphone anyone know how we do it? thank you You must confirm all permission for screen2auto ne settings-aplication-screen2auto in settings-aplication-screen2auto are confirmed ans S2A don't work (S2A is ok but when i launch a apk ...black screen) I am looking for an owner of a xiaomi with android 11 (not root) who manages to make S2A work. I can't do it, S2A works but when I launch an app it starts on the phone but on the head unit I have a black screen, just the return button is here and work ... Thanks for your help.. I am looking for an owner of a xiaomi with android 11 (not root) who manages to make S2A work. I can't do it, S2A works but when I launch an app it starts on the phone but on the head unit I have a black screen, just the return button is here and work ... Thanks for your help.. I have exactly the same, but on the rooted Mi 9T, Xiaomi.eu, A11 I even use repackaged S2A that was provided yesterday here. With AA 7.0.164 (today Playstore notifies about 7.1.164 but I didn't updte) I believe the problem is with "screenshot" but I cannot find this permission .. The only way (similar method from the Fermata player thread) I found to overcome the problem for now is: - Use Android Auto version 7.0.614104 (tried v7.1.614554, it does not work in any way). - Rename the Screen2Auto app v3.6.2 (change the ru.inceptive.screentwoauto name) with Lucky Patcher or any other rename apk app. - Uninstall the original Screen2Auto and rebooted the phone. Screen2Auto hasn't disappeared yet. It works!!! Great!! Thx you! When you open S2A on AA, you have to quickly confirm the screen sharing on the phone. If you are too slow, it does not work.

When you open S2A on AA, you have to quickly confirm the screen sharing on the phone. If you are too slow, it does not work. You have to do it every time you want to use S2A. Try that. If it works, you can adjust the rights for screen sharing on the phone the prone any more. thanks for this help, i will test tomorrow The only way (similar method from the Fermata player thread) I found to overcome the problem for now is: - Use Android Auto version 7.0.614104 (tried v7.1.614554, it does not work in any way). - Rename the screen2Auto and install the renamed one. - Enable Unknown Sources on AA and patch/add the newly renamed app to AA with AA IO Tweaker as you normally would. I tried turning off/on the car, disconnected and reboted the phone, Screen2Auto hasn't disappeared yet. Thanks for this, but can you explain exactly how you changed the name of the apk using luckypatcher? Unfortunately, I can't use Screen2Auto because it slows and/or bootloops every phone I use it on, so I'm still using AA Mirror. I tried to clone the app and changed the name of a file, but it still isn't available on the car screen.

-Solved.— May only need Root Explorer to edit the files/apk, but I could be wrong... android.os.Parcel.readException(Parcel.java:2392) android.os.Parcel.readException(Parcel.java:2392) android.os.Parcel.readException(Parcel.java:2334) I think this caused by change of A12 mediaProjection needs permission and FOREGROUND\_SERVICE (before projection start) 1. permission AndroidManifest.xml show this permission. () 2. A12 need foreground service before start projection. (I'm not sure) Please check this changes This may be incorrect (I'm not a Android Developer), But please check this point Smartphone screen on Anddroid Auto HU car screen For root devices only! Application features: - The main reason for creating this application is working with Android 9 Pie 1. Completely new application combining AAMirror & AAStream features.

2. Additional functions: clock, dimming, selection of resolutions, etc. 3. Ability to choose the automatic launch of any application at A2M startup. 4. Floating button to control the application from the HU screen. 5. Ability to reset if incorrect output and resolution distortion.

You have to do it every time you want to use \$2A. Try that. If it works, you can adjust the rights for screen sharing with ADB so that you don't have to confirm the screen sharing on the phone any more.

6. Many other chips... Installation and setup: 1. Download and Install Screen2Auto 2. Enable developper settings in Android Auto and enable Unkown sources in developper settings.3. Use the AA AIO TWEAKER from @shmykelsa for activation third-party applications. 4. Launch the application and perform the initial setup of permission recovery.

Click on the button and save them.5. Make the necessary settings as desired. Warning: If, after turning off the smartphone or exiting AA (turned off the car, closed the emulator, removed the USB), the resolution of the smartphone features, etc. were set incorrectly, etc.), you need go to Settings → Reset settings and select the WM SIZE RESET option. Resolution will be restored to factory. Don't forget to use the button (if you want course): Warning! New version of the application repleased! Thanks to everyone who offered delicious coffee! All of this thanks to all caring people. Attention! You can download and install S2A on rooted devices without root using the new application and install S2A on rooted devices. What's newPreview Well, as usual, I will be glad your coffee Download: 111 just tried this app but it doesn't show on aa. I run flos 18.1 All on redmi 3s 2gb ram with microg, no root.

I run all the permissions on aa and s2a but still nothing... Maybe some weird option? Anyone can help? I just tried this app but it doesn't show on aa. I run flos 18.1 All on redmi 3s 2gb ram with microg, no root. I run all the permissions on aa and s2a but still nothing... Maybe some weird option? Anyone can help? See discussion (last two days) in the other XDA thread: Reactions: PanosT I successfully installed S2A (following the instructions in the previous posts) and it's working! But most of the time after connecting to the car and opening AA and S2A - when opening an app (eg TomTom) the screen turns black with only the Touch-Button visible. I have to go back to S2A menu (2-finger click), go to S2A settings and restart S2A - only then the app ecomes visible. Once that this site is not held the restart S2A installation process and automatically changes the package name for you, which allows it to re-appear in Android Auto. It works well and is available here from the Screen2Auto created an app called AA Ease (note that this site is in the Created and permission and automatically changes the package name for you, which

language, so google translate may be necessary for english speakers) Last edited: Dec 15, 2021 Reactions: zgfg I'm using AA 7.1.something and the S2A icon is not showing up after following the usual steps... AA Ease worked for most smoothly like it did on AA 6.7 I'm using AA 7.1.something and the S2A icon is not showing up after following the usual steps... Nothing new. For example, look at the post post right before yours. There are also some other/older posts above about the workariunds E g, for me, agliter the S2A works perfectly again Is there a solution to get Neflix and Prime to show video? The Apps are working, but i just get the audio, the screen shows a black screen, not the right video. How can i get this working? Do you have the same problem (black screen in the car, only audio) when opening other apps from S2A or only with Netflix (and Prime)? I had with all apps and got it fixed by running the script from shell from the XDA AAIO Tweaker are needed): Hello, I tried to adapt a shell script inspired by what I read in AA AIO Tweaker logs (I have a very basic knowledge). I don't need to do any process like delete flags manualy or colloning, about it. Bye Page 4 Youtube is working fine. Just Netflix and Prime doesnt work. Other apps i didnt try... Android 10, FloydRom v6 Android Auto 7.12 Screen2Auto 3.5 beta and 3.6.2 Tryed LuckyPatcher (Clooning), AAEase Youtube is working fine. Just Netflix and Prime doesnt work. Other apps i didnt try... Android 10, FloydRom v6 Android Auto 7.12 Screen2Auto 3.5 beta and 3.6.2 Tryed LuckyPatcher (Clooning), AAEase That's DRM copyright protection. Doesn't allow video when screen casting/mirroring. Not going to happen. Just get the Cinema HD app. Reactions: zgfg Here's the easy fix: The developer of Screen2Auto developer's site: AA Ease (note that this site is in the Russian language, so google translate may be necessary for english speakers) I was using S2A on an unrooted Galaxy S7 with Android 8 which I installed using the ADB method. Will AA Ease work on an unrooted

Obviously, I used the lucky cracker to install the cloned S2A the day before and it did not fail...

Now my launcher cannot run S2A anyway! 昨天更新了Android auto以后我的S2A失效了 明明前一天还使用幸运破解器安装了克隆的S2A并且没有失效......现在我的启动器无论如何都无法运行S2A! Last edited by a moderator: Dec 19, 2021 Installing S2A6.2 through AAEase on AA7.1 from A7 2017 but the icon is no longer displayed on the car screen. In my case i see s2a on aa but the app doesn't work, just a black screen with a message: no new messages on this root. Any one knows why? Android 11 root uninstall the original s2a installation, use aaaios2a to join the white car and restart a few hours after the normal test, turn off the system and wait a while before connecting to continue normal 安卓11根卸载原来的s2a 安装使用aaaios2a加入白车重启几个小时后上正常测试关闭系统等一会儿再连接继续正常 Last edited by a moderator: Dec 19, 2021 from AAease install s2a。 next。 AA aio pantch is OK. I tested it at night and connected the vehicle twice. Until now, s2a has not been killed by Google. from AAease install s2a。 next。 AA aio pantch 就OK了 在晚上时候测试,两次连接车辆 直到现在s2a 依旧没被合歌干掉 Last edited by a moderator: Dec 18, 2021 Page 5 Yes. At least it worked for my unrooted Samsung S10+ Android 11.

How did you do the install? I downloaded and sideloaded AAEase, and then installed S2A from AAEase. AAEase had me uninstall s2a prior to the new S2A installation. However, S2A is not showing up in AA as an available app. I've tried rebooting the phone. Last edited: Dec 16, 2021 Lucky Patcher actually calls it "Cloning".

apk \*\*): Could someone repost this? The transfer has expired. Thanks ^^ Thanks, that worked! As a data point, I was using S2A on my unrooted Galaxy S7 (Android 8).

I had installed it using the ADB method. Then it stopped working due to the latest problems. I tried using AAEase to install S2A but S2A didn't show up in AA. I installed the patched version of S2A posted above using the ADB method and it works again.

I haven't used it again extensively so there may be problems. Now I just need to remember all my S2A settings. There are also other apps like ApkRenamer and Apk Editor Pro, but haven't tried them. An example of cloned app, that has been renamed to ru.inceptive.screentwoautp using Lucky Patcher has injected anything malicious in the apk, I hope not, I'm also using the

I just got back to 7.0.x for the moment With AA 7.1.x not working. In settings in AA is s2a visible but in launcher not. Installed from Play store Last edited: Dec 17, 2021 Not true. With AA 7.1.x. everything works correctly. I am update AA from Playstore. Install s2a with aa ease-unistall previous version of s2a and install new by aa ease, but not working. I have xiaomi phone. On AA 7.0.x all works. can you write how you installed? Tested today and it works, but... Not possible to use touchscreen on car unit? So i have to do this on the mobiles screen? What's wrong maybe in ma settings? Did anyone get it to work with Android 12? I get it shown in the AA Launcher, but every time I'm starting S2A from the car, it gets force closed. by me not working on 7.1.x Last edited: Dec 17, 2021 Did anyone get it to work with Android 12?

I get it shown in the AA Launcher, but every time I'm starting S2A from the car, it gets force closed. Me, too. A12 crash S2A with exception. This is not a block problem. I think, cause of A12 changes, PROJECTION need foreground service, but S2A does not seems impliment. Any Suggestionen about no touch Response on car unit? Xioami Redmi Note 10 pro Android 11 No root Car is VW Touran 2018 Discover media Page 6 Yes i tried.

No difference After that Do a reboot or delete an app cache or something like this? No Chance. Can t find out with which setting the picture is mirrored. Sometimes yes, sometimes no.

And always without any Response on the car unit. Touch to start an app works, but inside the app... Nothing. And sometimes getting this message That's DRM copyright protection. Doesn't allow video when screen casting/mirroring Not going to happen. Just get the Cinema HD app. Yes, Netflix does not allow casting (to AA).

Seems to be very unstable with my setting. I think it's time to change the threads name Working on non rooted devices, too. Might get people's hopes up, as it doesn't work well or at all on many non rooted devices.

I have DRM L1 on the phone and I even tried by enabling Fix Netflix option in S2A, Other Settings, but no avail. Once started to play, audio goes to car speakers and Netflix controls are visible in the car but video is only on the phone Btw, Netflix similarly does not allow Screenshots when playing Tried with various patches for Secure screenshots, they enable screenshots for other apps that otherwise block screenshots (like Chrome in Incognito mode), but not for Netflix. At best, Rated 13 and so can be screenshotted but not the Netflix video Hello.

I have a samsung S7 with android 8, which I rooted with magisk. I am trying AA 7.1. First I installed the magisk 23 version and when I remembered it did not work with that version I put the 20.4 again using TWRP. I have used the AAEasy and the AAIOTweaker, but have not been able to get S2auto to appear in AA. The Fermata Control app does appear in AA. What could be the problem? In another phone that had it working, update everything and it works correctly. Thanks Alexander Re installed via aaad.

works with profile 3. Last challenge is the touch delay and the poor resolution of the most apps. I think, this can not be handled without root. And the apps aren't made for AA, so... Thanks to all. Reactions: Anton Chigurh Next problem. Setting of alternative input get lost every time I close screen 2 Auto.

For those who have problems with AA try removing the current version of AA and installing the ver. 6.9. Last edited: Dec 18, 2021 Everything is fine now with AA. But using screen 2 auto, no touch Response inside any app. The screen 2 Auto Launcher responses.

Any hidden setting I should do? Cr using alternative touch and select one of three profile (in other settings), everytime you try to change profile, you remember to stop accessibility service (and restart after modify), or flashing SU\_Connector module in Magisk. Tested any possible touch setting without success. And magisk only works on rooted devices I think. My mobile is not rooted.

Conclusion, not working without root and with my mobile and car setting. What to set in the accessibility service? Last edited: Dec 18, 2021 Tested any possible touch setting without root and with my mobile and car setting. What is the accessibility service? You can find it on your settings on android.... Open settings and find accessibility, you must find screen2auto. Found and granted. This has to be unmarked and marked again after every change of touch profile? Hooray it

Don't know how to prevent miui system to do this. Last edited: Dec 18, 2021 Guide for detaching Android Auto from Google Play (post #471 in the other thread) - to prevent updates to the more and more restrictive versions: For the full-proof detaching AndroidAuto (AA) or any other app (like YouTube if using root Vanced) from Google Play = Playstore (to prevent bothering about updates or even by mistake updating that app), use Hide My Apps (HMA) module for LSPosed Hence Magisk is required with Riru-LSPosed if using new Magisk Canary or Alpha 2301x Before detching, uninstall AA or at least uninstall its updates and install from ApkMirror an older version of AA you want to stick with Then, configure the HMA: - install HMA apk from Github (Google is your friend) - enable HMA in LSPosed and reboot - open HMA and choose Manage Templates, Create a blacklist template, Edit list, Enable Show System apps and checkmark AndroidAuto (plus any other app you want to hide from Google Play). Give some name ("Playstore" on my screenshot) to your template and SAVE (diskette icon) - because going back without saving will iscard all your changes (!!!) - still HMA, take Select Effective Apps, enable Show System apps and pick the Google Play. Checkmark Enable hide, Work mode Blacklist and Enable all hide methods (!!!) - still HMA, take Select Effective Apps, enable Canary or Handle apps Install or run LUCKY PATCHER. find and Select screen2 auto then click on intruments (in italian strumenti) Then click on clone app After cloning it asks if you want to install the clone Click install clone and pooffffff.........on android auto screen2 auto then click on android auto screen2 and peace again.

Naturally you must reconfigure again tje app but is visible on android auto starting apps Haven't tried(got all the way to renaming) because I just used AAEASE. But it looks like you can just use a Root Explorer app and go to Root/data/apps and rename the S2A app there.

Would be much easier. I tried install AA on a non rooted stock rom A7 mobile, it only installs the latest version, any try to install older versions ends up requering to update AA, wich doesnt show S2A in 3rd apps, even installing it via AAapp store Page 7 This is one of the most desired apps and solutions. One that brings up immense possibilities. Much more than most average apps. Because it brings the whole world of Android over to a whole new place. In relation to the recent problems, it is hopefully time for someone to step up and post a tutorial of how to avoid the problems and make it work. I sure hope screen2auto lives on. Reactions: reini1982, [email protected] and PanosT I tried install AA on a non rooted stock rom A7 mobile, it only installs the latest version, any try to install older versions ends up requering to update AA, wich doesnt show S2A in 3rd apps, even installing it via AAapp store Non rooted will require installing it via AAapp store Non rooted will require installing S2A using adb commands on a P.C. But since I have change the rom of my phone and reinstall everything i have a black screen on Netflix (video is runing on the phone but not on AA, i only have the sound and command buttons). Does any one of you know how to fixe this issue? Thanks for any help! and thanks for this wonderfull app! I have found an alternative way, it is possible to use Netflix on KODI (search "HOW TO INSTALL NETFLIX KODI ADD-ON" on google), but if anyone know how to make it work with netflix app it would be even beter.

Hello, I love this app, and use it for a long time. But since I have change the rom of my phone and reinstall everything i have a black screen on Netflix (video is runing on the phone but not on AA, i only have the sound and command buttons). Does any one of you know how to fixe this issue? Thanks for any help! and thanks for this wonderfull app! It was discussed here last week or so that it's blocked for Netflix by DRM, did you check With old ROM and everything, you were able to project android" on my OnePlus6 it was working. And before this rom i was with oxygen OS 10.x.x (can't remember what version exactly) and it was working too. Early december when i have seen S2A wasn't on AA anymore i haven't check on the forum and wiped all my phone with a new rom (mistake was made!) and since then it doesn't work anymore. I haven't install back ICPA but i think i will give it an other try if i can't find a solution by the end of the month. Today it's not working anymore. Bkackscreen.

Also you now have to adb a patched APK on nonrooted devices as well. Not for novices and would definitely clutter up the thread with questions already discussed. Guide for detaching Android Auto from Google Play (post #471 in the other thread) - to prevent updates to the more and more restrictive versions: I tried this method with AA 6.3. While PlayStore no longer knows AA is installed, AA itself asks to be updated, and will not proceed unless you do. Anyone else have alternative solution? I use AA 6.9 and it only warns that I need to update when I start AA, but it doesn't block me to use. Don't use too old AA (6.3) Edit: I updated AA to 7.0.614174, S2A still working for me and no warning when starting AA about the needed updates Last edited: Dec 21, 2021 Reactions: seeheng Hello, i have a huawei mate 20 pro and i am able to use screen2auto after install from AAEase. The problem is too sensitive and when i touch the screen it "opens" at first tap, at profile 2 it doesn't do anything and at 3 things are better but still it scrolling more lines so its not so usable) Is there something that ic and doe dut. English added Do you mean anyauto audio? Any idea what could be problem and how to solve it?
Thanks. Did you have to use AAc phenotype patcher, AIO tweaker, or the third party app sqlite fix in addition to AAease? What version of Android are you on?
Strange that my S2A shows on the app launcher but it just keeps force closing on the AA headunit Didn't use any of those, only AAEASE. On Android 10, don't plan on updating as I'm rooted with OTA's blocked. I've installed this app and it work well when I use the phone touchscreen but I can't use it with touchscreen on vehicle. I've tried many

My LG G6(spare line) for instance, touch screen doesn't work once you launch an app. I've tried all the settings combinations.

different settings but when I chose any application (for example YT or Google), after that it simply doesn't work. S2A is latest 3.6.2 version, Android Auto is also latest 7.1.614574 version, phone is Samsung Galaxy Note 8 (unrooted). Any idea what could be problem and how to solve it? May be the unrooted phone. Touch screen doesn't work on my Head Unit with my unrooted LG G6 or Samsung A50 either. I can only repeat that for me S2A still works, on the ROOTED Xiaomi.eu Stable) with Android 11 1) Using AndroidAuto 7.0.614174. By detaching from Google Play, prevented to be automatically updated (I tested 7.1.61 and it didn't work for me, hence downgraded back to 7.0.61) 2) Using Android Auto for Phones (user interface for the AA service) to put AA to Developer mode 3) Using the repackaged version of S2A - package name ru.inceptive.screentwoautp (observe the p at the end), a good soul has uploaded to XDA 4) Using AA AIO Tweaker to patch selected apps, in my case CarTube, Fermata and Screen2Auto 5) Executed the schell script as block 3rdapp hack.sh another good soul has created and posted to XDA E.g., yesterday when I tested with AA 7.1.61 and it didn't work - I carefully re-did everything from above (writing it here also for my future reference) I'm not going into details. Everything from above I learnt from these two threads in XDA - AA AIO Tweaker thread and S2A thread. I got a car with AA about a month ago, when I started to read, learn and play with AA and S2A. Everybody else can do his homework as well Of course, certain steps from above require ROOT: 2, 4 and 5 (and 1 partially, too). I don't know if there are alternatives for all of them for the non-rooted phones (e.g., I don't know does AAEasy substitute only 3 or also some other steps) - I don't care as long as I have my rooted phone --- When I say that S2A works for me it means the following: - When I connect the phone by USB and establish AA connection, I have S2A icom on the car head unit, and I can operate AA and S2A by touch from the car - Usually I give it a minute or two (syncing the phone, etc), before opening S2A (if I want to use it) - If my phone locks the screen then I cannot open S2A, I must first unlock the phone screen, then to tap S2A icon on the Infotainment screen for writing mails or browsing Internet is definitely not friendly, but yes, in the need it works - (Double) tapping to go back to the S2A launcher (its initial screen) does not work for me. Instead, it goes to the landscape version of my home screen - very impractical. Hence, I have enabled Permanent panel (in S2A, Launcher settings) as vertical bar on the left with app icons. That way I can easily switch between the apps inside S2A. On top, there is also the icon to go back to S2A Launcher. - Netflix does not project for me to the car head unit but I didn't test the old Netflix v6.99 (as was suggested on XDA) - Once I run S2A it minimizes the phone brightness that further causes me troubles if I have to unlock the phone before opening S2A or jumping in S2A from one app to another I described these issues because for some of them (e.g., when phone locked, I first wrongly thought that S2A was not working, etc) All together, I can now watch YouTube three ways om the head unit: by using CarTube, by using Fermata or by opening the YT from Screen2Auto Few cents from my side, if all that could help to others PS: After patching and unpatching many times in AA AIO Tweaker, I finally and for the first time succeeded to disable Maps navigation to start automatically when opening AA (I always flashed the same option and rebooted, but with no success - this time now it 'magically' works) Last edited: Dec 25, 2021 I have android 12 is there anyone with screen2auto working on AA in Android 12? I tried Fermata as well, and it works perfectly, while S2A has been force closing since 7.1 Only problem is I can't send youtube links from Tasker to open in Fermata directly. Have you figured a way to do that? My device isn't rooted and I did not use tasker at all, sorry. Page 9 - Once I run S2A it minimizes the phone brightness that further causes me troubles if I have to unlock the phone before opening S2A or jumping in Screen Settings "Overwrite Screen Brightness" I do this myself. You can turn off the first setting in Screen Settings "Overwrite Screen Brightness" I do this myself. You can turn off the first setting in Screen Settings "Overwrite Screen Brightness". Screen Brightness I do this myself. I had it turned off from the beginning (screenshot), but S2A nevertheless minimizes the brightness I also experimented with various Screen restore Brightness I also experimented wit Uninstalled AA and started installed 6.6 version and opened developer options and ticked download from unknown sources. But playstore forced AA update on both phones to AA 7.1.614574 but kept the original settings and all apps. Screen to auto work very well for over a week now. Thanks for help. Non rooted Samsung Note 8 and 9(android 9) Reactions: perindet and gullzway Im having trouble put This working with my phone. On my tablet works perfect. But when Connect to my phone when i start APP it dont start.

and 9(android 9) Reactions: perindet and gullzway Im having trouble put This working with my phone. On my tablet works perfect. But when Connect to my phone when i start APP it dont start.

Got a Windows say no new mensagem Any ideias? Does anybody know how to prevent google maps from starting in android auto mode and start in normal phone mode, where it has more capabilities like share an address and etc.? I had this problem with waze, but when i removed it from AA launcher, it now starts as it starts on the phone when AA isn't working with my phone. On my tablet works perfect. But when i removed it from AA launcher, it now starts as it starts on the phone when AA isn't working with my phone. On my tablet works perfect. But when i removed it from AA launcher, it now starts as it starts on the phone when AA isn't working with my phone. On my tablet works perfect. However, they are in some random order. Is there a way to order them alphabetically or in custom order? I can't find a way to do that. I'd appreciate an advice. Just in case someone else would also look for a solution to this: I found that if you start waze from AA launcher, then Google maps can be started from screen2auto launcher and this time it will run on phone screen and the car screen in normal way with its full capabilities. \*\*\* Now I have another question: There is a button ALL APPS in the screen2auto launcher.

This brings up a list of all the apps from the phone on the car screen. However, they are in some random order? I can't find a way to do that. I'd appreciate an advice. You do understand that you can choose NOT to use screen2auto launcher, but anyone other. Where you can set it as you like. Reactions: tiho5 You do understand that you can choose NOT to use screen2auto launcher, but anyone other.

Where you can set it as you like. I know that. I'm also using the phone's launcher - in my case Nova. But I want to also use the s2a launcher. My car is about to arrive and I don't know how exactly it's going to work, but I'm guessing that I can use the driving wheel buttons to navigate the screen2auto launcher, because screen2auto launcher, because screen2auto launcher. Please, correct me if I am wrong.

I know that. I'm also using the phone's launcher - in my case Nova. But I want to also use the s2a launcher. My car is about to arrive and I don't know how exactly it's going to work, but I'm guessing that I can use the driving wheel buttons to navigate the screen2auto launcher, because screen2auto is an app from android auto, while this isn't going to be possible for Nova launcher (where it should only be possible to operate from the touch screen of the car). That's why I still would like to find a way to reorder the apps under All APPS of the screen2auto launcher. Please, correct me if I am wrong.

Screen2auto just show the screen of you phone. Just like if you have put a camera in front of your phone screen. If you have nova in phone, you will see nova in car screen.

The problem is that you will see nova in portrait mode in car screen, so you will see full screen nova launcher in car screen. You will not benefit anything by having screen2auto launcher if you use your car button to select an icon. It is that same as if use nova. The easiest way is to use touch screen and not any buttons for both launchers. By using Tasker you can create scripts to have nova in landscape mode when you connect to the car etc.

I personally now have a dedicated phone for android auto with launcher only for this. I don't use anymore screen2auto launcher. I was using nova, now i use another one. Screen2auto just show the screen of you phone. Just like if you have put a camera in front of your phone screen. If you have nova in phone, you will see nova in car screen. The

I don't use anymore screen2auto launcher. I was using nova, now i use another one.. Thanks again. I am aware of this and I have set it up with Tasker and everything. I've tested it in a car of a friend of mine. It looks as expected. The thing is that the new car, I'm waiting for, has a touch pad on the driving wheel. This can be used to move/jump from one icon to another and turn things on for me.

However, I expect that this can only work in the s2a launcher, not in the phone screen projected on the GU. That's probably why s2a has a native launcher of its own in the first place. But I don't understand why the apps there can't be reordered.

Or at least I haven't been able to find a way to do it

Or at least I haven't been able to find a way to do it.

Thanks again I am aware of this and I have set it up with Tasker and everything. I've tested it in a car of a friend of mine. It looks as expected. The thing is that the new car. I'm waiting for that a touch pad on the driving wh

If so whats the best way to do that. I'm trying to do that now.

S2A not work at all -- at least for now.

understand that your playstore force you to update AA.. In my phone, Android 11 i just click AA not to auto update, and it never does, without all this.

app on the headunit. Most of the times I can see my phone screen (main menu). Can someone tell me why this happens?

Thas can be used to move/jump from one icon to another and turn things on for me. It looks as expected. The thing is that the new car, I'm extend to move/jump from one icon to another and turn things on for me. But I don't understand why the apps there can't be reordered. Or at least I haven't been able to find a way to do it. No, \$2a launcher, not in the phone screen projected on the GU. That's probably why \$2a has a native launcher of its own in the first place.

But I don't understand why the apps there can't be reordered. Or at least I haven't been able to find a way to do it. No, \$2a launcher. It own are more power used in phone you say. But try it anyway to see by yourself. The reason for existence of \$2a launcher is to easily launch another launcher used in phone you will move from it on the GU. That's probably why say have any button of the own in the first place.

But I don't understand why the apps there can't be reordered. Or at least I haven't been able to find a way to do it. No, \$2a launcher. If in his provide anything special. You will end up to ester used go in phone you will move from it in the first place.

But I don't understand why the apps there can't be reordered. Or at least I haven't been able to find a way to do it. No, \$2a launcher. If the say and not all, and having special. You use now, samsung or \$2a launcher. If expect having the same result i describe by using the same result is described. But the same time unmodified on use, I would be useful. If button remapper if would be useful. If button remapper is used to use, I would be useful. If button remapper is used to use, I would be useful. If button remapper program is used to use, I would be useful. If button remapper program is used to use, I would be useful. If button remapper program is used to use, I would not use, I wou

it SHOULD not be related with Maps auto-launching in AA) In disbelief I test it every day two or three times (whenever using a car) and Maps really do never launch automatically anymore. I always get AA screen with icons (incl. Maps, Waze, S2A, CarTube and Fermata), but with no app launching automatically And it happily works that way now for five or six days (and I don't want to experiment anymore with settings) Yes, it works as you describe it.. It is unstable somehow..

Some times it works, some not. For me, it worked to disable Bluetooth when android auto connect. I now need the Bluetooth, i unpatche this selection but, doesn't restore back the Bluetooth working. So use it with caution.. I have a problem. When I'm trying to call someone I can hear that person on the phone speaker not on the screen dont work to the phone neither) I have a problem. When I'm trying to call someone I'm trying to call someone I can be a problem. When I'm trying the screen go black, but the phone works, (and the touch on the screen dont work to the phone neither) I have a problem. When I'm trying the screen go black is a problem. When I'm trying the screen go black is a problem. When I'm trying the screen go black is a problem. When I'm trying the screen go black is a problem.

to call someone I can hear that person on the phone speaker not on the phone speaker not on the phone speakers, how can I solve this?

I've tried to tick the force audio but it didn't fix this...Any help for me? Thanks! I'm not sure if this would help, but it helped me when some of the media sounds weren't going to the car, but to other devices, such as galaxy buds for instance. Anyway I decided to post it, in case it ever helps someone.

Do you have Samsung? And if so, do you have good lock sound assistant installed? Make sure multi sound option is disabled in sound series it ever helps.

someone. Do you have Samsung? And if so, do you have good lock sound assistant installed? Make sure multi sound option is disabled in sound assistant. I do have a Samsung but lucky me that I don't have Sound Assistant installed I can only repeat that for me S2A still works, on the ROOTED Xiaomi Mi 9T (Xiaomi.eu Stable) with Android 11 1) Using AndroidAuto 7.0.614174. By detaching from Google Play, prevented to be automatically updated (I tested 7.1.61 and it didn't work for me, hence downgraded back to 7.0.61) 2) Using Android Auto for Phones (user interface for the AA service) to put AA to Developer mode 3) Using the repackaged version of S2A - package name ru.inceptive.screentwoautp (observe the p at the end), a good soul has uploaded to XDA 4) Using AA AIO Tweaker to patch selected apps, in my case CarTube, Fermata and Screen2Auto 5) Executed the schell script aa block\_3rdapp\_hack\_sh another good soul has created and posted to XDA E.g., yesterday when I tested with AA 7.1.61 and it didn't work - I carefully repeat that for me scheduling there also for my future reference) I'm not going into details. s2a are you using? anyone knows how to fix the touch problem?

my touch in the car dont work. only the first time and to go back Same for my LG G6(Moto Ace 5g works fine.) Seems to be phone dependant. I tried all 3 alternate touch profiles. Have you tried those? Weirdly a few days ago it randomly worked inside an app, but hasn't since. A difficult question: touch working fine if i don't use stress option in setting, to make s2a full screen. But I have black bars up and down in car screen this way. If i select stress option, i have full screen, but touch is not responding exactly where it should. In the middle of screen is ok but as a move to the edges of the screen, it has more and more a difference from where i press with finger, and where it actually touch. Its about a centemeter, but long enough to make pressing, a problem. Has anyone a solution for this? Thanks, touch screen to sensitive Hi, I have a significant time offset between language and image. Particularly annoying when playing video. Which setting should I choose? Audi A3 8Y 2021 und Samsung S10 with root. S10 connected via AAWireless-Box (Indiegogo), Screen2Auto vers. 3.5.6 What can I do? I don't have the AAwireless box, but I just set up the AAGateway app on a spare Moto G7(I leave it in my console pluged into the head unit with cable hidden) and connect wirelessly from my Moto Ace 5G running Android Auto with AAStarter App. Works great. Can't believe I hadn't

Anyway, I also have a slight audio lag using it this way vs a cable. Fortunately, the main app I use is IPTV Extreme for playing IPTV video channels. This app has an Audio delay setting and set to -300ms the audio is in perfect sync with the video. I don't see that option on the Youtube app or other Video apps but there may be alternative apps you can try. Not sure if that's something the Developer can implement into the Screen2auto? I see that android auto can start in sygic automatically. If i rename internally screen2auto? I see that android auto can start in sygic automatically. If i rename internally screen2auto is same name as sygic, and Uninstall sygic? Thanks, Isn't any way to auto start screen2auto? I see that android auto can start in sygic automatically. nothing else has worked and AA keeps auto updating. If you dont mind sir. Can i use Titanium Back up for that? update: I got it working here's my steps. Might help someone out. 1. I used SD maid and uninstalled AA system app 2. Installed AA version 7.0. with an APK installer 3. Went developer options in AA then ticked the usual items 4. Used titanium back up to detach market link 5. Installed s2a and fermata auto with AAEASE 6. Used AAAO tweaker to patch those 3 apps As of for now its all working. I would suggest, read a few of the last pages. If you want to stay working for more, change s2a internal name with some app, apk editor, or lucky patcher, or app cloner, and try not to force update Android auto by Google. I have one question: sometimes I have the issue? I would suggest, read a few of the last pages. If you want to stay working for more, change s2a internal name with some app, apk editor, or lucky patcher, or app cloner, and try not to force update Android auto by Google. Or just install S2A using the developers installer AAEASE. It does all this for you. I'm on the latest AA from the playstore. Reactions: tensux Or just install S2A using the developers installer AAEASE. It does all this for you. I used that but it wouldn't work just install sall the carlier versions of app and similar apps. This time was a pair for me to get a work around let. Thenks I tried that The link in that page is broke. There was a healytesty not a single.

Had to install earlier version AA and detach market link. No matter what I did it would want to update AA automatically. Ive been running S2A since it came out plus all the earlier versions of app and similar apps. This time was a pain for me to get a work arrows in that post is broke. There was absolutely not a single link in that post #1940. It was only a name of the sh script that stupid browser or webciew might want to show as a "link". But again, it was just a name of the sh script that stupid browser or webciew might want to show as a "link". But again, it was just a name of the sh script that stupid browser or webciew might want to show as a "link". But again, it was just a name of the sh script that stupid browser or webciew might want to show as a "link". But again, it was just a name of the sh script that stupid browser or webciew might want to show as a "link". But again, it was just a name of the sh script that stupid browser or webciew might want to show as a "link". But again, it was just a name of the sh script that stupid browser or webciew might want to show as a "link". But again, it was just a name of the sh script that stupid browser or webciew might want to show as a "link". But again, it was just a name of the sh script that stupid browser or webciew might want to show as a "link" sught and never bothers to update my detached apps although I'm e.g. on the old AA 7.0.614174 - screenshots Ah crap my bad for the posts; on the link is part to the sh script that stupid browser or webciew might want to show as a "link". But again, it was just a name of the sh script that stupid browser or webciew might want to show as a "link" sught and never bothers to update the posts in thread (as I didy) to find that script, and other ingredients Btw, I'm using Hide My Apps to detach Android Auto (and YouTube because of Vanced root) and I never, ever have a problem. Playstore always reports that all my apps are up to date, and never bothers to update the post for while and could have been doing some issues.

What i was saying, is that what you did, will probably not protect you in the future. Some day, Google will do an update, and your old version will show you a message that you must update. If you stay in the old version, AA won't boot any more. I have frozen playstore, play services, etc, block internet access, and some day in a big AA update (not for minor update), AA stopped working without updating it.. I think I'm clearer now.

One day Google will probably force to upgrade AA, will see Actually, I will probably sooner or later have to upgrade to A12 and will see about AA there Has anyone managed to make any of: AAmirror, Screen2Auto, Fermata apps to work on Android 12? I've tried any method and I only managed to make the apps appear on AA but all of them crash upon tap on the Head unit. The only thing that is actually working is "HideMyApplist" since AA no longer asks to update the app that could be a good starting point.... I've always used S2A since forever but my stupid brain had the nice idea to upgrade to A12... Android 12 Rooted Samsung S21+ 5G AA version: 7.0.614174 Reactions: zgfg Has anyone

managed to make any of: AAmirror, Screen2Auto, Fermata apps to work on Android 12? I've tried any method and I only managed to make the apps appear on AA but all of them crash upon tap on the Head unit.

The only thing that is actually working is "HideMyApplist" since AA no longer asks to update the app that could be a good starting point.... I've always used S2A since forever but my stupid brain had the nice idea to upgrade to A12... Android 12 Rooted Samsung S21+ 5G AA version: 7.0.614174 I have no A12 yet, but thinking of taking a new phone with A12 Independently of S2A, Fermata also crashes? Similarly, did you try CarTube Do their icons show on Head Unit?

I suppose you used/configured AA for Phone Screens (to configure Debug mode) and AA AIO Tweaker (Select and Patch custom apps) Reactions: luiscaproducer Exactly as you said...Patch all 3 apps and all of them showing properly on AA drawer but Screen2auto and AA Mirror report a message (On the phone screen) that the app is crashing. Fermata Auto just don't load....You tap on it but it just won't launch. Haven't tried CarTube yet. AA in developer mode. 3rd party apps enabled Tried to install from AAease or AAAD just for the glory of it, but as you can imagine the results were the same. I will probably downgrade back to A11, but this pissed me off

TBH. Truly hoping some legend make it work somehow.... EDIT: Someone seems to made it work (Just Fermata Auto) in Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 11, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Android 12 in this thread here: Last edited: Jan 12, 2022 Reactions: zgfg Screen2Auto and Fermata Auto for Androi

clone the app and save the cloned app somewhere in your device. - Uninstall S2A - Download and install KingInstaller 1.2 (Find Attached) - Use KingInstaller 1.2 (Find

Create a Blacklist template in HideMyApplist and you select the Android Auto app, click on save.

(top right icon). Always on HMA Go to "Select Effective Apps" and look for google play store and tap on it, enable the following "Enable Hide", "Enable all hide methods" applied the blacklist template. Save (top right icon). - DONE! Use the same process for Fermata Auto if you're interested. I don't really know if all these steps are needed to make it work but I would recommend to "stick to the plan". PLEASE GIVE FEEDBACK IN ORDER TO CONFIRM THE FLOW. Cheersss Thank you for the concise guide I can not test yet on A12 (still have the phone with A11 only) but I'm interested in few questions: - You said AA v6.9.613744, hence v7.0.614174 (good for A11) is not good for A12? - Why exactly you needed King Installer? I wonder what additionally it does/enables to make it work S2A on A12 (on A11 I didn't need King Installer), that is not possible without. Besides, it says King Installer is for non-root (you're rooted). And you have already cloned/repackaged S2A, you patch in AA AIO Tweaker, etc You have to install the repacked S2A with King Installer. On my A11 I have installed repackaged S2A just as apk, with absolutely no need for King or whatever! The whole procedure was described in one of my posts from the beginning of Dec, stll running S2A, Fermata and CarTube with no problem Reactions: SOFO888 You have to install the repacked S2A with King Installer. I have another question: sometimes when I launch Screen2Auto, it opens the Screen2Auto

(Find Attached) - Use KingInstaller to install the cloned version of S2A previously saved - Use AA AIO Tweaker app to patch the app. Reboot. - Open S2A and give all permissions. - Use HideMyApplist to detach Google Play store to update the AA app (If you're running Magisk Canary Release download the Zygisk - LSPosed module to make HMA work).

Found the reason for my question by myself. Screen2Auto only opens on Android Auto when I started it before on my phone. Then everything is fine and the main menu of the phone is mirrored. I posted an ADB command back a couple pages done, but this is the result C:\Users\erind>adb shell appops set ru.inceptive.screentwoauto PROJECT\_MEDIA allow Error: No UID for ru.inceptive.screentwoauto in user 0 where i'm wrong Solved with allow Error: No UID for ru.inceptive.screentwoauto in user 0 where i'm wrong Solved with allow Error: No UID for ru.inceptive.screentwoauto in user 0 where i'm wrong Solved with allow Error: No UID for ru.inceptive.screentwoauto in user 0 where i'm wrong Solved with apk tools I found the right name for s2a. Risolated and re-enable developer options and set AA to allow unknown apps in developer options. Now I have my apps showing on my head unit. Hope this helps someone else, as i guess AA version 7.x reset developer options. Cheers, B.D. I recently updated my SGS20+ to Android 12; Stream2Auto is still present within Android Auto, but it crashes as it starts; I sent a few debug info. Anyone can help? I recently updated my SGS20+ to Android Auto, but it crashes as it starts; I sent a few debug info. Anyone can help? What about the post #2012, prev page, last week, with the guide for A12, did you read/follow, does it work for you? Page 13 What about the post #2012, prev page, last week, with the guide for A12, did you read/follow, does it work for you? No. My phone is not rooted and Screen2Auto DOES crash, it is not simply blocked or something similar. If that's the only way, I think I have to give up using it. Do you mean that S2A crashes for this reason? Even if S2A? I disabled it and until now I did not have the random music pauses I mentioned before. What does the function audio focus on connect do in the settings of S2A? I disabled it and until now I did not have the random music pauses I mentioned before.

this function is buggy. Sometimes it pauses music, sometimes not. For me it is better to disable this function and use Tasker instead to play/pause music.

I found this tip on fermata auto topic, it was written by Fcartone: "I found the right version to use to have a normal working android auto update and use version 6.9 but not a random one but the last one 6.9.613744, on my test phone i was on 6.9.613724 and wasn't work say me i need to update but with 6.9.613744 work perfectly for now" I've tried and it works for me. (Samsung s21, android 12). can anyone help with this? I think I finally have it working on A12, but somehow managed to spilt the screen and I cant get it back. I would rather not have to start from scratch. thanks I've set up S2A on a rooted phone and it works as it should. The only thing that bothers me is that when I get an email when I am connected to Android auto, I don't have and I don't have and I don't have and notification sound play on the car? I still get sounds and notifications for WhatsApp for instance. But not for AquaMail. What am I missing here?

That is a generel Android Auto bug.

Sometimes there are no notification sounds. You can clear data and cache and hope that it will work next time. I had the same issues with a lot of apps... Reactions: tiho5 That is a generel Android Auto bug. Sometimes there are no notification sounds. You can clear data and cache and hope that it will work next time. I had the same issues with a lot of

If I enable Audio focus, then my infotainment Radio mutes immediately when I e.g open YouTube from S2A and start playing a song/movie Hence I keep Audio focus disabled, then Radio continues to play and mutes only when I e.g open YouTube from S2A and start playing a song/movie Hence I keep Audio focus, then my infotainment Radio mutes only when I e.g open YouTube from S2A and start playing a song/movie Hence I keep Audio focus disabled, then Radio continues to play and mutes only when I e.g open YouTube from S2A and start playing a song/movie Hence I keep Audio focus is disabled, then Radio mutes only when I e.g open YouTube from S2A and start playing a song/movie Hence I keep Audio focus is disabled, then Radio mutes only when I e.g open YouTube from S2A and start playing a song/movie Hence I keep Audio focus, then my infotainment Radio mutes only when I e.g open YouTube from S2A and start playing a song/movie Hence I keep Audio focus is disabled, then Radio mutes only when I e.g open YouTube from S2A and start playing a song/movie Hence I keep Audio focus is disabled, then Radio mutes only when I e.g open YouTube from S2A and start playing a song/movie Hence I keep Audio focus is disabled, then Radio mutes only when I e.g open YouTube from S2A and start playing a song/movie Hence I keep Audio focus is disabled, then Radio mutes only when I e.g open YouTube from S2A and start playing a song/movie Hence I keep Audio focus is disabled, then Radio mutes only when I e.g open YouTube from S2A and start playing a song/movie Hence I keep Audio focus is disabled, then Radio mutes only when I e.g open YouTube from S2A and start playing a song/movie Hence I keep Audio focus is disabled, then Radio mutes only when I e.g open YouTube from S2A and start playing a song focus is disabled, then Radio focus is disabled, t

apps... So it is working for you now? In that case, please tell me what version of AA are you using. I guess you changed the DPI-value somewhere. any idea where I might have done that? I have tried everything. I uninstalled screen2auto, femeta and the like. I used root installer trying to uninstall android auto. I have updated to the newest android auto from the playstore and it is still showing spiltscreen. Afraid I will have to have to reset the phone. Last edited: Jan 23, 2022 @tiho5 It's version 7.0.113904. @tensux Try to delete AA data and cache. Moreover check AIO tool. Or if you use AAWireless, check the companion app. But in fact, there are many possibilities to change the DPI. Reactions: tensus and tiho5 That did it thanks. I had uninstalled the tool but I reinstalled it and played around with the settings and it's working now Reactions: SOF0888 Page 14 Reactions: tiho5 This should work fine. For those that don't want to use lucky patcher and king installer, just use AAAD to install Screen2Auto as it changes the package name automatically anyway. AAEase does as well. At least now S2A shows up in the AA app list again. As long as AA doesn't detect that there is an update available it should be good to go. I'll report back when the wife gets home with our other car.

My issue was Google forcing the update upon me when AA launched, like others were having. Testing on a Whyred with this weeks lineage 18.1. I should have a PocoF3 to test on any day now as well. I also have a Carsifi on order so that we can try to test this over wireless AA using that dongle, as well as the AAWireless dongle mentioned above. Edit: AAEase confirmed by tiho5. Edit 2: I tried the latest available from the playstore for me (7.1.614574) and that was a no go to even have Screen2Auto show up in my app list.

I will verify 6.9 later on tonight (it should be working since S2A shows up in my app list). Then I will give the 7.0 build that someone mentioned above, a try. Cheers guys and thanks to Luiscaproducer for posting the step by step quoted below. Screen2Auto and Fermata Auto for Android 12 Dear all, I managed to have S2A working again on Android 12...I'd like to let everyone know that I am NOT a developer and I'm just reporting here the steps that worked for me. ROOT REQUIRED - Uninstall any previous installed AA version (Except the factory one, if available) and install the AA 6.9.613744 - Enable 3rd party and developer mode on AA again - Download and install (no need to open it) the latest version of Screen2Auto, Use Lucky Patcher to clone the app and save the cloned app somewhere in your device. - Uninstall S2A - Download and install KingInstaller 1.2 (Find Attached) - Use KingInstaller to install the cloned version of S2A previously saved - Use AA AIO Tweaker app to patch the app. Reboot. - Open S2A and give all permissions - Use HideMyApplist to detach Google Play store to update the AA app (If you're running Magisk Canary Release download the Zygisk - LSPosed module to make HMA work).

Create a Blacklist template in HideMyApplist and you select the Android Auto app, click on save. (top right icon). Always on HMA Go to "Select Effective Apps" and look for google play store and tap on it, enable the following "Enable Hide", "Enable all hide methods" applied the blacklist template. Save (top right icon).

- DONE! Use the same process for Fermata Auto if you're interested. I don't really know if all these steps are needed to make it work but I would recommend to "stick to the plan".

PLEASE GIVE FEEDBACK IN ORDER TO CONFIRM THE FLOW. Cheersss Last edited: Jan 23, 2022 Reactions: zgfg AA 6.9.613744 does work when unlinked from the play store, but even though it doesn't force you to update and making

Edit: 7.0.614174 is still working fine as well, as does not set the notification that 6.9.613744 sets above. Edit 2: 6.9 seems a little more stable on my phone than 7.0 does. But both do work once disconnected from market. If you do not disconnect it, they will all force you to update to 7.1 before working (and thus break S2A). Last edited: Jan 24, 2022 Hello, what am I doing wrong? If I install the older AA version and block it according to the instructions, my Samsung Galaxy S10+ with Android 12 no longer connects. The latest version of AA must always be on it first, only then screen2Auto no longer works. It only shows a black screen for a short time and closes immediately. Did you completely remove all AA updates and clear the storage for the AA app before installing a working version? Mine was keeping data for the built in version even when updates were uninstalled. There are a few more reboots required than the original instructions (ie have the canary version of magisk installed for A12, Riru, Isposed and hide my applist. I had to reboot after installing each of those modules even on A11). Where I'm on A11, I was able to use the official Magisk 23. It did take some trial and error to get working properly in the end. If you don't have root using the canary version of magisk for A12 im not 1 LuckyPatcher? LuckyPatcher? LuckyPatcher? LuckyPatcher? LuckyPatcher? LuckyPatcher? LuckyPatcher? LuckyPatcher does not need root. Is there also a possibility to detach Android Auto with LuckyPatcher? LuckyPatcher does not need root. It haven't have root for some update after a fresh install) is in your system partition and you don't have root, then no you probably cant. Titanium Backyou used to work for detaching, but again, root was required.

YouTubeVanced does by using a different package name. I don't know if vehicles will even launch AA if it isn't signed with Google Assistant support with Vanced. If you try to voice control the non-root version, GA will tell you that you don't have YT/YT music installed. If

(That is what I used to detach apps in earlier versions of Android on my Z2, but sometimes they would still reappear in the Play Store after a reboot). If there is no stub for the AA apk in your system partition, you MIGHT be able to change the package name and/or resign it with your own key. This is essentially what the non-root version of

Page 15 Hello! Screen2auto works (again) on Android12 (Samsung A52) right after updating with, except touchscreen functionality. (see also Chat "Fermata Media Player - audio and video player for Android Auto", #754) Reactions: SOFO888 Hello! Screen2auto works (again) on Android12 (Samsung A52) right after updating with, except

you have the root versions of Vanced, then Google Assistant will work fine, because the APKs have the package names that Google Assistant expects them to have. So as far as it knows, you have legit versions of the apps installed. Where AA doesn't even have it's own icon in the app drawer anymore and is accessed through the settings menu, it is possible you wont even see it in there if the package name is changed. (This is speculation on my part as I have never had a reason to try that). I would guess that without support current versions of AA age name is changed in the not too distant future, we may all be. It seems that Google REALLY doesn't want unauthorized apps working with Android Auto, especially screen mirroring apps. Edit: Expanded on some thoughts and fixed up some legibility issues. Last edited: Jan 25, 2022 Reactions: zgf gif you bootloop on an OTA update (like mine just did not odays release of Lineage 18.1), force a reboot into recovery, clear cache and dalvik, and reboot again. The phone will then boot but I ended up with Lsposed being partially activated after that reboot. It says SeLinux policy not loaded properly, so the Magisk recovery script didn't run properly when the OTA update installed. Go into your Magisk app and reinstall Magisk and reboot. Then all should be well again. (I'm guessing this had something to do work for detaching, but again, root was required. (That is what I used to detach any in the Play Store after a reboot). Screen2auto will work for me with AA 6a; sin that I used to detach any in the Play Store after a reboot). Screen2auto will work for me with AA 6a; sin that I used to detach any then without updating anything it will stop working the next day. I need to reinstall AA and repatch to get it to work again. are you saying you can use titanium back up to solve this? You can try with Titanium Backup Pro to detach AA from market to see if it still gives you problems. I'm not even sure if that function in TB will work still in A12. I haven't used that method to detach sin

touchscreen functionality. (see also Chat "Fermata Media Player - audio and video player for Android Auto", #754) Root or non-root? Did you re-enable the accessibility service? Just working on a procedure using Magisk 23 right now. Back up your HideMyAppList settings through the app. Remove HMA, LSposed-Riru, and Riru plugins from Magisk 24.1 using the app. Install LSposed - Zygist rather than LSposed Riru. Install HideMyAppList again, and install the Zygist plugin from the app, rather than the Riru plugin. Import your saved settings in the HMA app. Install Magisk SafetyNetFix 2.21 if needed. Reboot. If it bootloops clear cache and dalvik. Mine didn't but it did the last time I followed the procedure listed a few times back for Magisk 23+Riru+LSposted+HMA. ...Profit? This is on Android 11/Lineage 18.1 but should work on Android 12 as well. There is no longer a need to use the canary build of Magisk as 24.1 has gone official. It should bring proper support for Android 12. Unfortunately the built in repo is gone (no big loss if you can find your own plugins. The biggest lost is magisk hide, which is why I included the SafetyNetFix step. I haven't had a change to see why zygist supported root hiders are out there, which the magisk dev acknowledges in his change log are actually working better than his built in implementation. Obviously he didn't want to name names. Development on HMA has stopped as well unless you compile it yourself. The author's successor to HMA is coming, but it is still in development at the moment. Cheen guys. Edit: Android Auto is working fine using the procedure above to upgrade to Magisk 24.1 from 23 on Android 11/Lineage 18.1 Last edited: Jan 30, 2022 Root or non-root? Did you re-enable the accessibility service? Just working on a procedure for running everything / upgrading to Magisk 24.1 / Zygist from everything working on the previous procedure using Magisk 23 right now. Back up your HideMyAppList settings through the app. Remove HMA, LSposed-Riru, and Riru plugins from Magisk 24.1 using the app. Install LSposed - Zygist rather than LSposed Riru. Install HideMyAppList again, and install the Zygist plugin from the app, rather than the Riru plugin. Import your saved settings in the HMA app. Install Magisk SafetyNetFix 2.21 if needed. Reboot. Cheers guys. Edit: Snow storm outside. I will go test Android Auto later, but there is no reason it shouldn't work. Were just using Zygist now instead of hooking the system modified now that Magisk Hide is gone, but due to the limited support it doesn't work with any of my card issuers anyway, so no real loss. what version of Lsposed are you using? I am on 1.6.5 (6272) and it keeps asking me to update but there's no beta update, only alpha Ignore. I'm on 1.6.5 (6327). Once you install your LSPosed modules like HMA, you don't need to open LSPosed anymore, hence you don't see it asking for update that fails then @HeStauss Please let us know if your device is rooted. Which Screen2Auto version do you use? Hello! My device (Samsung A52) is non rooted, Screen2auto is version 3.6.2. The accessibility service and/or the alternative touch option in Screen2auto needs to be established/reactivated for every new connection to the head unit to have the touch screen working also. Attachment to head unit to have the touch screen working also. Attachment to head unit to have the touch screen working also. AAEase V0.4. Same configuration worked well on Android 11 (non rooted), and right after factory-update to AA V7.2.620124-release-72620124 minAPI23(arm64-v8a) Screen2auto started correctly and mirrored the phone-screen to the head unit. Last edited: Jan 29, 2022 Reactions: mik101 and SOFO888 Thank you very much. With Android Auto 7.1 I did not have luck. I quess I will try your version as soon as I have to update. Thanks again. This is really helpful. Hello! Screen2auto works (again) on Android12 (Samsung A52) right after updating with , except touchscreen functionality. (see also Chat "Fermata Media Player - audio and video player for Android Auto", #754) That build doesn't work for me on lineage 18.1/Android 11. Back to 7.0/6.9. Ignore. I'm on 1.6.5 (6327).

Once you install your LSPosed modules like HMA, you don't need to open LSPosed anymore, hence you don't see it asking for update that fails then Removing it after installing HMA causes a bootloop on Lineage 18.1/Android 11 on a whyred with Magisk24.1+zygist. So I'd recommend not doing that. Trying to recover my phone now... Edit: Fixed using the magisk recovery mod found here from the terminal in TWRP. Disable all plugins from terminal to break the bootloop, reinstall LSposed-zygist, then enable all modules again and reboot one more time. So I'd recommend not doing that. Trying to recover my phone now... Edit: Fixed using the magisk recovery my phone now... Edit: Fixed using the magisk recover my phone now... Ed

needs to be established/reactivated for every new connection to the head unit to have the touch screen working also. Attachment to head unit (e.g. car navigation system FORD Sync3) ist done via cable connection (USB-C). Installation of Screen2auto-app is done by AAEase V0.4. Same configuration worked well on Android 11 (non rooted), and right

after factory-update to Android 12 Screen2auto crashed at every startup. After update to AA V7.2.620124\_minAPI23(arm64-v8a) Screen2auto started correctly and mirrored the phone-screen to the head unit. This worked for me zf3 android 12 aaad and no root. I can see the s2a apps and Taskbar and launch them but they all show a black screen and have to reboot the MMI head unit to rediisplay. I am trying to run JBV1 This worked for me zf3 android 12 aaad and no root. I can see the s2a apps and Taskbar and launch them but they all show a black screen and have to reboot the MMI head unit to rediisplay. I am so close now. Any ideas why apps go black? I am trying to run JBV1 Its working now. The only issue I have which was causing the blank screen was that each app that was launched caused the dialogue below. I have installed and uninstalled [email protected] many times, and I am sure I granted the permission to start recoding or casting with screen2auto. Now, I keep getting that approval to launch the app.

I have installed and uninstalled [email protected] many times, and I am sure I granted the permission to start recoding or casting with screen2auto. Now, I keep getting that approval to launch the app. How can I set this permission permanently? Otherwise, its working flawlessly For a permanently granted

permission follow post # 1399 (page 70): "...you are granting this app permission to start screen recording without prompting. No root required. adb shell appops set ru.inceptive.screentwoauto PROJECT\_MEDIA allow ..." Did anyone else have luck with Android Auto 7.2? Yes.

I'm on a rooted Pixel 6 with Android 12 and Majisk 24.1. I've only had the phone about a week.

I was reading this article last night that led me to try AA 7.2. I downloading the following apk which is the correct one for my system. Following instructions elsewhere, I installed S2A 3.6.2 with KingInstaller 2.1. Then I tweaked it with AA AIO Tweaker 5.01. Then I started S2A and granted all permissions requested.

Then I booted up AA on my car and S2A did not appear on the screen. Now this is the critical part that made it work. I enabled devloper and selected Unknown Sources. Then S2A appears on my AA screen and I just enjoyed watching some YouTube videos on my way to the gym. Yeah! Having said that, when I left the gym just now S2A did not appear on my screen, so I still have some work to do. I read above someone said you have to clear cache on AA everytime before use so I will give that a try. But I consider this progress.

Hopefully other Android 12/Pixel 6 owners will give it a try and we'll soon have this figured out. Last edited: Feb 3, 2022 Reactions: robi101012981, mik101 and SOFO888 Hello to everyone, I wanted to test Screen2Auto on my old phone. It is a Motorola Moto G5 on Android Auto 6.8, deleted cache and data. However Screen2Auto does not appear. I really do not understand why it works on my daily phone, but not on my old phone. I just wanted to use this phone for some testing.

Did anyone else have luck with Android Auto 7.2? It's working fine now for me on Lineage 18.1/Android 11 on a whyred with the new version of AIO patcher (5.0.1). The changelog says that the patching procedure has been updated to support newer versions of Android Auto.

Page 16 Hello. The first time S2auto is run it takes a few seconds to project the screen. Then the operation is very smooth. But when a time passes without being used again, it takes time to project the screen again.

(my phone is permanently in the car) Is there a way to always leave S2auto in memory so that it projects faster the first time it is executed? (S2auto is not optimized for battery saving) Thanks a lot Alexander Hello to everyone, I wanted to test Screen2Auto on my old phone. It is a Motorola Moto G5 on Android 8.1 with Android Auto 6.8. It's crazy...I

used the same apk like on my daily phone. Unfortunately Screen2Auto does not appear. Even with deleting cache and data. However Screen2Auto does not appear. I really do not understand why it works on my daily phone, but not on my old phone. I just wanted to use this phone for some testing. Likely blacklisted the package name. It will likely work again. If playstore is forcing the 7.1 update regardless, you'll probably have to install it and then detach the APK from the store to keep it from forcing the update as many of us have in the previous pages. Hello.

The first time S2auto is run it takes a few seconds to project the screen again. (my phone is permanently in the car) Is there a way to always leave S2auto in memory so that it projects faster the first time it is executed? (S2auto is

@mik101 I tried all 3 install methods. Nothing worked. On my daily phone it was no problem. Both phones are not rooted. Therefore I can't unlink the apps from the Playstore. That's strange. I wonder if google is changing things through the play services app then. I don't have anything non-root here to test. Yes, it is strange. And yes, Google also

not optimized for battery saving) Thanks a lot Alexander Try pinning the app in the task switcher if your android build/skin supports that feature. @mik101 I tried all 3 install methods. Nothing worked. On my daily phone it was no problem. Both phones are not rooted. Therefore I can't unlink the apps from the Playstore.

forces Play Services updates. And one of the updates killed Screen2Auto about 2 months ago. When uninstalling the Play Services update, everything was ok. After the next update of Screen2Auto everything was ok. After the next update of Screen2Auto to run. Hopefully this helps somebody but today I noticed that if my dimmer was all the way down in my truck it would put my radio would change to night mode and I had no way to access screen2Auto or anything in there bottom Yes, it is strange. And yes, Google also forces Play Services updates.

And one of the updates killed Screen2Auto about 2 months ago. When uninstalling the Play Services update, everything was ok. After the next update of Screen2Auto about 2 months ago. When uninstalling the Play Services update, everything was fine again. I wonder if Motorola has some kind of modification/software for so called "user safety" which leads to this situation. Perhaps this is the reason why there are some phones with which people could not get Screen2Auto to run. Mine just disappeared too when I got in the car a few minutes ago. So I went back into android autos list configuration on the phone, and sure enough it doesn't show up in the list again after working fine for days. Edit: Cleared data on AA and repatched and it returns. I wish Google

some phones with which people could not get Screen2Auto to run. Mine just disappeared too when I got in the car a few minutes ago. So I went back into android autos list configuration on the phone, and sure enough it doesn't show up in the list again after working fine for days. Edit: Cleared data on AA and repatched and it returns. I wish Google would realize they're not the ones liable if we're playing with our phones while driving... Last edited: Feb 6, 2022 Mine just disappeared too when I got in the car a few minutes ago. So I went back into android autos list configuration on the phone, and sure enough it doesn't show up in the list again after working fine for days.

Edit: Cleared data on AA and repatched and it returns. I wish Google would realize they're not the ones liable if we're playing with our phones while driving... Did you check if there was an auto update of Android Auto or Google Play Services? Play services hasn't updated since December, and the AA build is still AA V7.2.620124-release-72620124 minAPI23(arm64-v8a). The latter is detached from playstore and won't update automatically. I'll try it again on the car in the morning. If it keeps acting up I'll just go back to 6.9/7.0. I was just hoping 7.2 would work reliably since my new PocoF3 will be getting MIUI

13/Android 12 once the bootloader countdown finishes in a couple days In the meantime I'm still using my Redmi Note 5 Pro (Whyred) running Lineage 18.1/Android 11. Also still waiting for my Carsifi adapter to ship. I wish they would just ship them without the USB cables that their contracted factory messed up. Did you try to reinstall Android Auto 7.2.6? a12. solved it by just upgrading the android auto with Kinginstaller b) patched Android Auto and Screen2Auto with AOI Tweaker 5.01 Setup: rooted Xiaomi Redmi 10 (Miui 12.5.9, Android 11) Magisk 24.1 Screen2Auto in my Skoda Octavia (Bolero Radio) Reactions: Rasec2002 Page 17 I got another new problem here: My Android auto somehow updated

even though it's detached from the Playstore and now I have that new multi-screen. 1st problem is: every way of installing s2a again didn't work for me and if it works for a few minutes s2a only shows up on the left side of the multiscreen, not on the entire one. I can't even deactivate the multi-screen with the AA AIO Tweaker, did anybody have similar problems? Might just change back to one of the older working versions I guess Screen2Auto with AOI Tweaker 5.01 Setup: rooted Xiaomi Redmi 10 (Miui 12.5.9, Android 11) Magisk 24.1 Screen2Auto 3.62 Android Auto 7.2.620124 using Screen2Auto in my Skoda Octavia (Bolero Radio) Hi. Are you able to use Amazon prime video and Netflix and do they display properly or do you just have a black screen? Why no one is using firewalls and block all [email protected] to access net? No access to net no update, problem solved... I'm still on AA 6.9 and all fine no update is forced to me. Simple solution even for non-rooted devices. You could use app like netguard - it's using VPN. For update I'm using AuroraStore. I also thought about using a Firewall. Do you have any issues when you block Google Play Services? Do you receive Whatsapp

messages with Google Play Services blocked? EDIT: I installed Netguard. Can you please explain which packages you blocked? Thanks. Last edited: Feb 16, 2022 I also thought about using a Firewall. Do you have any issues when you block Google Play Services? Do you receive Whatsapp messages with Google Play Services blocked? EDIT: I installed Netguard.

Can you please explain which packages you blocked? Thanks. In netguard I blocked all google apps (use search icon on top and type google, block all.. Look at pic example. Can't access to that phone because I leave it in car)... I don't use WhatsApp or any social app at all (I love my privacy)... I'm using an old phone only for AA and S2a, car notifier, carstream, etc.. I even uninstall google play store with LP and installed fakestore. For google I'm using fake googlestub. So actually my only way to update is using AuroraStore. My next project is how to get all AA and 3rd party apps working on microG. PS.

You can even disable aka freeze google play store with LP. Last edited: Feb 17, 2022 Reactions: SOFO888 Thanks. I deactivated Google Play Services Internet access. Unfortunately in Android Auto I had the following behavior afterwards: - Google Maps did not show any map - Google Maps did not find my position - Assistant was not working at all any more Therefore I ended up granting only mobile internet access. Hopefully Google does not force me to update when I do it this way. Netguard also deactivates the apps Download and Download Manager. Does anyone know what apps these are? What are the disadvantages of deactivating these two apps? Screen2Auto with AOI Tweaker 5.01 Setup: rooted Xiaomi Redmi 10 (Miui 12.5.9, Android 11) Magisk 24.1 Screen2Auto 3.62 Android Auto 7.2.620124 using Screen2Auto in my Skoda Octavia (Bolero Radio) Must just be working on the global rom then. On the China rom) Poco F3/Redmi K40. It works fine on a Redmi Note 5 running Lineage 18.1 using the same procedure. I've tried everything that worked previously on the other phone on the Poco and have yet to get S2A to show up at all in AA, even on 7.2.62014.. also tried every build going back to 6.9. Installed with AAEase, AAAD, and KingInstaller in multiple attemps. Each install is a clean one. I've also tried clearing AA data/cache repeatedly like what would sometimes be necessary on the Note 5 between AA launches. Every previously documented procedure is not working on this device/rom combination. I have been using AA AIO 5.0.2 to do the patching, but I'm tempted to try an earlier version after nothing has worked.

Obviously developer options are enabled each time in AA to allow unknown sources. All of these methods still seem to be working on the Redmi Note 5 w/Lineage 18.1 a shot on the Poco F3 to see if it makes a difference instead of the Xaiomi.eu rom. I'll try it on MIUI 13 once we have an official TWRP that

works for Android 12 on the Poco F3. (Yes i'm rooted, using Magisk 24.1, running LSPosed 1.7.2 Zygist to detach AA from the playstore using HMA 2.3.2 on both phones.) Last edited: Feb 19, 2022 Must just be working on the global rom then. On the China/EU variants the same procedure isn't working. (12.5.19-- Android 11 Xaiomi.EU rom, which is based on the China rom)... Not for me, I have the following case: Xiaomi Mi 9T, Xiaomi.eu, MIUI 12.5.2, A11 - working (already using for three months Fermata, CarTube, Screen2Auto) Xiaomi 11 Lite 5G NE, stock Global/EEA, MIUI 12.5.2, A11 - working (already using for three months Fermata, CarTube, Screen2Auto) Xiaomi Mi 9T, Xiaomi.eu, MIUI 12.5.8, A11 - not working (already using for three months Fermata, CarTube, Screen2Auto) Xiaomi Mi 9T, Xiaomi.eu, MIUI 12.5.8, A11 - not working (already using for three months Fermata, CarTube, Screen2Auto) Xiaomi Mi 9T, Xiaomi.eu, MIUI 12.5.8, A11 - not working (already using for three months Fermata) Xiaomi Mi 9T, Xiaomi.eu, MIUI 12.5.8, A11 - not working (already using for three months Fermata) Xiaomi Mi 9T, Xiaomi.eu, MIUI 12.5.8, A11 - not working (already using for three months Fermata) Xiaomi Mi 9T, Xiaomi.eu, MIUI 12.5.8, A11 - not working (already using for three months Fermata) Xiaomi Mi 9T, Xiaomi.eu, MIUI 12.5.8, A11 - not working (already using for three months Fermata) Xiaomi Mi 9T, Xiaomi.eu, MIUI 12.5.8, A11 - not working (already using for three months Fermata) Xiaomi Mi 9T, Xiaomi.eu, MIUI 12.5.8, A11 - not working (already using for three months Fermata) Xiaomi Mi 9T, Xiaomi.eu, MIUI 12.5.8, A11 - not working (already using for three months Fermata) Xiaomi Mi 9T, Xiaomi.eu, MIUI 12.5.8, A11 - not working (already using for three months Fermata) Xiaomi Mi 9T, Xiaomi vorking neither Fermata, CarTube, Screen 2Auto, I tried always clean installing with KingInstaller or without, repackaging or not - spent two weeks for gradually trying various combinations) Both phones rooted with Magisk Canary 24102 Not for me, I have the following case: Xiaomi Mi 9T, Xiaomi.eu, MIUI 12.5.2, A11 - working (already using for three months Fermata, CarTube, Screen 2Auto, Xiaomi 11 Lite 5G NE, stock Global/EEA, MIUI 12.5.8, A11 - not working (tried various versions of AA Tweaker 4.9-5.0.2, Fermata 1.8.10-1.8.11, cannot make vorking neither Fermata, CarTube, Screen 2Auto, I tried always clean installtions, installing with KingInstaller or without, repackaging or not - spent two weeks for gradually trying various combinations) Both phones rooted with Magisk Canary 24102 Thanks for the feedback.

There's definitely something peculiar going on in miui, whether they're doing something differently and AA AIO isn't patching correctly, or a different security measure (ive set all permissions than I can to allow all the time, and battery optimizations off) -- but their ROM is still pretty aggressive with what it will and won't let apps do. It has worked fine on all of my friend's phones I've attempted it on from various manufacturers, but no one else I know locally uses Xiaomi. The next thing I'll have to try is going into the developer settings of the ROM and turning off MIUI Optimizations. If I remember correctly from earlier versions of MIUI that should disable a lot of the security warnings you get enabling things like accessiblity features etc when setting up screen2auto. I'm a little disappointed overall because AndroidAuto/S2A performance was one of the main deciding factors in replacing the Whyred, otherwise that phone still did everything I needed it to do. Cheers. Edit: I forgot to add that regular android auto works on the F3/K40 works fantastically over TypeC in a 2021 Toyota Corolla, but wireless Android Auto drops the connection every few minutes in a 2021 VW Jetta. It makes me wonder if I should try to cancel my Carsifi order and just condemn it to TypeC for now. Is anyone else trying to use wireless AA? Edit2: Google managed to finally break newer versions of YT Music

Vanced in Canada. It acts like a glorified radio streaming program now. Voice commands don't want to work without YT Premium to select individual songs anymore. Had to go back to 4.27.50 to get some functionality back. According to users on Reddit these countermeasures were rolled out in Canada first and can be bypassed using a VPN to connect to a US server, but who knows how long it will keep functioning in other jurisdictions. I think that it works on my Mi 9T (Davinci) with Xiaomi.eu Stable MIUI 12.5.2 due to its old Google Play Services updated on Aug 2021 On the other side, on the new Mi 11 Lite 5G NE (Lisa), Stable/EEA MIIUI 12.5.8, not working, due to the Google Play Services updated on Aug 2021 On the other side, on the new Mi 11 Lite 5G, Stable/EEA MIIUI 12.5.8, not working, due to the Google Play Services updated on Aug 2021 On the other side, on the new Mi 11 Lite 5G, Stable/EEA MIIUI 12.5.8, not working, due to the Google Play Services updated on Jan 2022 That could be. I'll double check the Whyred when I get home to see what is currently on that. Last I checked it was the December 2021 build of play services. It's 21.48.15 on the Alioth, so early January 2022 as well. Likely the same build that is on your M11 Lite. That could be. I'll double check the Whyred when I get home to see what is currently on that. Last I checked it was the December 2021 build of play services. It's 21.48.15 on the Alioth, so early January 2022 as well. Likely the same build that is on your M11 Lite. It works on play services 21.45.55 (the

original version that came with this ROM). I detached it from play store. We'll see how long this lasts. I need to go actually test it in the car on Alioth. No lagging and apps being forced closed due to low memory like on the Whyred. Edit 2: It worked for a day. Now I can't get it to show up in the app list again even with clearing AA data and repatching with AIO 5.0.2. The versions of all apps are the same as what I was using yesterday. The fun continues. Last edited: Feb 21, 2022 Mod Translation Please advise. I have installed on my Xiaomi note 10 pro, android 11, MIUI 12.5, Screen2Auto and when I connect to AA it shows the splash screen. When I click on any app on the car radio, the screen turns black but the app starts on the phone. Again, I can double click to get to the splash screen turns black but the app starts on the phone. Při kliknutí na jakoukoli aplikaci na radiu v autě obrazovku, která se na rádiu zobrazí. Nevíte, v čem může být zakopaný pes??? Díky Last edited by a moderator: Feb 21, 2022 @bropol

it's because the MIUI launcher doesn't play nicely with the forced rotation in the screen2auto app. Either set it to launch everything without going through MIUIs launcher. Seems to be a bug in MIUI12.5 and we just have to work around since the launcher doesn't have the ability to rotate. @SOFO888 I don't think that's his problem. The black screen occurs when screen2auto is launched, not when AA auto is launched, so his S2A is installed fine. I had the same issue. Unfortunately mine stopped showing up in AA again last night and I'm back to square one. None of the installers make a difference. AA can even see S2A installed when you click the version info at the bottom of the AA settings. It's starting to look more and more like completely blocking Google services from the net is the only way around it on some devices, but obviously that eliminates most of the useful functionality of AA. Last edited: Feb 21, 2022 With a rooted Android 8.00 Oreo (Samsung Galaxy s7), can I mirror via Bluetooth only, without connecting USB cable to the car? Page 18 root your phone download and install screen2auto use phenothypepatcher to patch screen2auto reboot enable Unkown sources then you'll be able to mirror your phone screen on your Head Unit I am confused about using 'AA-AIO-TWEAKER' vs 'phenothypepatcher'. Can I just use one of them to patch/unlock a 3d party app (such as Youtube)? I am confused about using 'AA-AIO-TWEAKER' vs 'phenothype db. But you cannot patch app (such as Youtube)? But you cannot patch app (such as Youtube)? I am confused about using 'phenothype db. But you cannot p built for AA Instead of YT, you could patch Fermata or CarTube (both can connect to YT server) How can I mirror via Wifi, without USB? Do you understand the difference between WiFi and BT?! As I said, AA offers you to mirror by USB or WiFi, not over BT. Only your phone pairs with BT - but that is not mirroring You can set up that AA automatically turns on BT, that your PHONE (Contats, Calls) pairs with the car But if you don't pair the phone (calls, contacts), AA can still mirror Navigation and other AA apps Please forget for the moment tweaks and play with the stock AndroidAuto to get familiar how things work out of the box Instead of YT, you could patch Fermata or CarTube (both can connect to YT server) If I only need to be able to navigate over/browse YouTube content and listen YouTube audio, do I actually need to install Screen2Auto app? Instead, can I just use AA+'phenothypepatcher'+CarTube? Thanks P.S. When driving, I do not want to watch YouTube video (on listen to audio), but do need to conveniently navigate over/browse YouTube content Last edited: Feb 21, 2022 If I only need to be able to navigate over/browse YouTube content and listen YouTube audio, do I actually need to install Screen2Auto app? Instead, can I just use AA+'phenothypepatcher'+CarTube? Thanks P.S. When driving, I do not want to watch YouTube video (on listen to audio), but do need to conveniently navigate over/browse YouTube content Google allow only GMaps navigation and messaging (like WhatsUp and similar) over Android Auto. Not YouTube (listening nor watching) For YT you need the hacks - either Screen2Car (to mirror any app to the car, incl. YT), or Fermata (to listen/watch music/movies from the phone or from YT) or CarTube (another app specific for YT over AA) There are three threads here on XDA - this one (Sceeen2Auto), one for Fermata and one for AA AIO Tweaker (you need them to patch S2A, Fermata or CarTube) Please find and read - when I started with Android Auto 5 months ago, I didn't bother with questions - I spent a week reading and testing

how things work And I first tested AA with no hacks, to see how it works, and specially how it works with my equipment (my Xiaomi.eu ROM does not support AA over WiFi) Bye and enjoy Last edited: Feb 22, 2022 Reactions: westhaking In such a case, I can mirror AA via Wifi, without USB cable. Correct? Thanks for your patience No not on an android version that old, you cannot. The only way to do that would be two phones, one connected via usb and one wirelessly connecting to the wifi hotspot of then usb connected phone (using screen2auto on one and screen2echo on the other), or with a hardware device such as Carsifi. Phones that old simply don't support wireless Android Auto without many hacks and workarounds. Your only option is USB without A LOT of learning as zgfg said. Zgfg, if your phone is running Android 11+ you should be able to turn on wireless projection in the developer settings of AA. Assuming that your car has support for wireless AA as well. I tried it on a 2021 Jetta on this Poco F3 running Xaiomi.eu ROM 12.5 stable (A11) and it didn't work very well though. I went back to a TypeC cable. I managed to get screen2auto working again on here last night, but after plugging it in for the night and going to sleep, I wake up to see that it's removed from my AA app list again. Edit: Something broke the accessibility service. Fixed again. Lol. Last edited: Feb 22, 2022 Reactions: tiho5 No not on an android version that old, you cannot. Keep is posted and good luck. Reactions: mik101 I was wondering what screen2echo is. Thanks. I'm also following your reports on how you are trying to get it working. Keep is posted and good luck. Starting from scratch installing Screen2Auto with AAEase, patching with AA AIO and using the same versions of AA and play services from my previous posts got it back again. I tried to go through every MIUI setting and turn off battery

optimizations, and allow every required app/service to auto start, and so far so good. MIUI is making this quite a bit more painful than Lineage 18.1. I'm still not sure what in the OS broke the accessibility option when I was asleep. I woke up to it saying that the "Accessibility Service is Malfunctioning" in the Accessibility settings.

was there for me temporarily when installed using KingInstaller but it is now gone. Seems I have to re-install with KingInstaller every time. S2A, carstream and Fermato Auto have been working on non rooted samsung note 9 with android 10. I have wireless AA setup and it has worked flawlessly for last 2 months.

The same thing happened with BitWarden, so it is something ROM related, not Android Auto/S2A related. The worst I ever had to do on the Whyred running LoS was clear AA data once in a while and detached from playstore using Magisk 24+LSPosed+HideMyAppList. No matter what I did with the latest version of Play Services, I couldn't get S2A to show up. I feel that part is really device specific though as not many others are mentioning such issues. S2Echo is another project of inceptive.ru that allows one rooted phone running S2A to remain in the vehicle connected via USB all the time. Then you run S2Echo (there's a link in the bottom right tile in Screen2Auto) on the devices that you want to use to connect to the permanently connected one. You can find more information here. My Russian is absolutely terrible, so I've been using Google Translate on their site. I see it hasn't been updated in quite a while, so development may have halted, but it might be worth checking out if thats a use case for you. As far as I know, the connecting phones don't have to be rooted -- just the permanently installed one. As far as I know, the connecting phones don't have to be rooted -- just the permanently installed one. Thanks again. My setup is fine and working. But I am in love in Screen2Auto and what I can do with it, so I'm following everything here to make sure I never loose it. That's why reports like yours are valuable and I thank you for them. I hope you've made it working permanent for you now. Keep sharing. Everything is important. Reactions: mik101 @mik101 Android turns off accessibility services if the app that uses the service is closed. It is a known "bug" of Android for some years already. You can Google this. You could use Tasker to turn on accessibility services before now,

rden this weekend. I didn't notice it ever shutting down on the Whyred, but maybe that was fixed in Lineage. With me it works without accessibility turned on. But I use it on rooted Samsung galaxy note 10+ with android 9 and Android Auto 7.0.614134. I can no longer see this app on latest Android Auto 7.3.620504 update. It

Downloaded the apps above with android 9, AA 6.6..version. Used AA Ease for S2A install and AAD Pro for Carstream and fermato auto. Upgraded to android 10 and AA has upgraded from 7.1 to 7.3 and all apps were retained and functional. Last edited: Feb 26, 2022 Reactions: SOFO888 So Ive been easily able to reproduce the problem of AA removing the apps. Setup (Im not 100% sure which is relevant, so including everything, but may have): Pixel 4 XL Android 12, January 5 2022 Security Patch Rooted Magisk 24.1 Google Play system update 12 ProtonAOSP Version 12.2.1 com.google.android.projection.gearhead 7.2.60124 (I do believe I was able to reproduce on 7.3.620503-release, but I needed to pee and im sick of walking out to my car) AAAD 1.4.3 AA AIO Tweaker 5.0.2 Screen2Auto VERSION AAStream 1.1.0.29 AAEase 0.4 SeLinuxModeChanger set to passive Google Play Services 22.02.21 Google Play Store 29.4.13-21 How to reproduce AA removing Apps when working: Verify Apps are listed in Android Auto under the 'Customize Launcher Button' on the phone app or are displaying in car displaying in car display apps (Only confirmed with Screen2Auto and AA Stream, so kill those two for sure) Launch Android Auto in car - S2A and AA Stream should still be there Open one of the display apps. I couldnt get AA Stream to work in Android 12, however it was still able to reproduce this error by just being opened. S2A was able to run and display my phones screen Disconnect phone Kill Android Auto app. This is the primary cause. When Step 4 of opening the display app, combined with a fresh instance of Android Auto are combined, this removes it from the list. This can also be verified as it is NOT listed under the 'Customize launcher' Note though they are still under the Versions at the bottom of the phone app, but are not on the launcher Partial Fix - If you are able to reproduce the above steps, the fix is moderately easy Kill Android Auto Clear Storage on Android Auto Reopen app (may need to reproduce the above steps, the fix is moderately easy Kill Android Auto Clear Storage on Android Auto Reopen app (may need to reproduce the above steps, the fix is moderately easy Kill Android Auto Clear Storage on Android Auto Clear Storage on Android Auto Reopen app (may need to reproduce the above steps, the fix is moderately easy Kill Android Auto Clear Storage on Android Auto Clear Storage on Android Auto Clear Storage on Android Auto Reopen app (may need to reproduce the above steps, the fix is moderately easy Kill Android Auto Clear Storage on Android Auto Cl but a portion of the permissions will be saved, saving some time (should do at a stop for safety and to not worry about speed limitations on phone) Better Partial Fix Using Titanium Backup (UPDATED) - still testing this, but seems to have worked Complete previous steps to make sure Android Auto shows Screen2Auto under the 'customize launcher' Disconnect the phone from car Make a titanium backup of the data (and application) Next time the issue occurs, Kill Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto (make sure to force close) Restore data for Android Auto (make sure to force close) Restor reopen again to get it to work properly after restoring the data. Verify that 'Screen2Auto' shows up under customize launcher and/or is on the main AA screen in your car (Explanation) The reason this is better is 2 things: Its very fast within Titanium to force close, restore data, force close, then open app. Possibly you could even make a tasker shortcut to do this. This makes it a lot less clicks, and makes it a ton faster. It should still maintain your permissions for AA. This part I'm still verifying. The reason this is important is then you dont have to do the silly process of bouncing back and forth between your phone and car screen, giving it permission, and having to stop the vehicle just to

click the 'accept' button. Im a bit annoyed I have to keep deleting the data, and haven't seen a better solution. Please if anyone has one let me know. Possibly with my updated Titanium solution, there might even be a way to make a tasker function that Force Closes AA -> Response AA every time a usb connnection

Or by looking into what is different about the data in both situations, the flag that AA is putting into the data that a DrawOverApps file was used or whatever could be investigated, Special Notes -I have tried using Detach3 through Magisk, the log said it installed correctly -I used a separate app to disconnect my AA from the play store, using both methods provided. This app is on the XDA forms, but the creator asked it not be associated with circumventing AA. Think albert einstein though -I have tried the above options with installing through APK, through AAAEase, and through AAAEase, and through AAAEase premium Last edited: Mar 15, 2022 In my case it's Google Play Services 22.02.21 that is the culprit. Roll back to 21.45.55 and it works, anything newer and nothing will get S2A to show up. I still have to clear AA data every time I connect to the car or S2A disappears though. Poco F3, Xiaomi.eu rom (their last release of Miui12.5 on Android 11, Magisk24+Zygist, LSPosed-Zygist, HideMyAppList, AA 7.2, latest S2A installed with AAEase and latest AA AIO). The Xiaomi "Restrict Chain Start" is a pain in the ass though and I can't seem to find a way to disable it. One of these days I'm just going to cave and switch the phone over to LineageOS like I did on my old Whyred (Xiaomi Redmi Note 5). Xiaomi likes to break API compatibility. Page 19 I have a problem with the display. Does anyone know how to fix this? I'm using Mi 9T. View attachment 5549653 The MIUI launcher doesn't seem to support rotating. You could try a different launcher and if that rotates properly. (Or use the Rotation lock in MIUI Notification Center to lock the phone into landscape and disable screen2autos force rotation. Yes the launcher will be sideways, but apps you launch should end up in landscape and disable screen2autos force rotation. Yes the launcher will be sideways, but apps you launch should end up in landscape and disable screen2autos force rotation. Yes the launcher will be sideways, but apps you launch should end up in landscape and disable screen2autos force rotation. could try a different launcher and if that rotates properly. (Or use the Rotation lock in MIUI Notification Center to lock the phone into landscape and disable screen2autos force rotation. Yes the launcher and see if this problem is fixed. By the way, do you have any recommended setting for this app? Thank you Hi all, I have a op3t rooted with Magisk, running AA 7.1. I used titanium to freeze the play store and GPS so no apps auto update and i am not forced to update the AA version to newer versiopns, in case it causes a problem.

To my surprise AA is still forcing me to update to the latest version. What do i need to do so that i'm not forced to update to the latest AA version ever. Someone suggested destroying all market links but im not sure if that a viable option. Any suggestions would be appreciated. First STOP WITH MULTIPLE POST IN M app like netguard (buy pro for more options - recommended). No net access no updates, \*\*\*\*\*\*\*." no connection to head hunit: "error occure" Yep, that's why most of us don't do it that way. (And we like to be able to update our other apps.) That's ignoring the fact that there are many free firewalls on google play and you don't have to pay for netguard if you actually want to stop those connections. I have PE11 on my phone and I have tried everything (including lower versions of AA, using AAEASE to install, or blocking google play

To my surprise AA is still forcing me to update to the latest version. What do i need to do so that i'm not forced to update to the latest AA version ever. Someone suggested. Hi all, I have a op3t rooted with Magisk, running AA 7.1 . I used titanium

would I have to unlink Maps from Android auto? Thanks Yes. I'm on a rooted Pixel 6 with Android 12 and Majisk 24.1. I've only had the phone about a week. I was reading this article last night that led me to try AA 7.2. I downloading the following apk which is the correct one for my system. Following instructions elsewhere, I installed S2A 3.6.2 with KingInstaller 2.1. Then I tweaked it with AA AIO Tweaker 5.01. Then I started S2A and granted all permissions requested. Then I booted up AA on my car and S2A did not appear on the screen. Now this is the critical part that made it work. I enabled devloper mode in AA 7.2 and then in devloper settings I set Application Mode to Developer and selected Unknown Sources. Then S2A appears on my AA screen and I just enjoyed watching some YouTube videos on my way to the gym. Yeah! Having said that, when I left the gym just now S2A did not appear on my screen, so I still have some work to do. I read above someone said you have to clear cache on AA everytime before use so I will give Hopefully other Android 12/Pixel 6 owners will give it a try and we'll soon have this figured out.

I am wondering if you have made any progress. Could you please share any news? I have PE11 on my phone and I have tried everything (including lower versions of AA, using AAEASE to install, or blocking google play services from networking with AA and other things) and at first it worked and was fine, when I restarted the phone, screen2auto

I'm desperate. Clear Android Auto data and it will come back if you're patched with AA AIO tweaker. Hello . I have tried to split the screen, but when the maps app is launched, it automatically goes full screen. How could I solve it? would I have to unlink Maps from Android auto? Thanks Is the screen in your vehicle actually wide screen? It doesn't work properly in my 21 Corolla for example because it isn't. So, I need do this everytime for dailyuse??? Pretty much, it may not necessarily be every time depending on your setup. Adds about 10-15 seconds to

services from networking with AA and other things) and at first it worked and was fine, when I restarted the phone, screen2auto disappeared from the AA interface. I'm desperate.

to freeze the play store and GPS so no apps auto update and i am not forced to update the AA version to newer versiopns, in case it causes a problem.

Hello. I have tried to split the screen, but when the maps app is launched, it automatically goes full screen. How could I solve it?

disappeared from the AA interface.

Google really doesn't want this to keep working on newer versions. There doesn't seem to be a permanent solution at the moment without giving up a bunch of functionality by completely blocking everything. It seems very ROM/device dependant though. Ie my Whyred running lineage works more consistently than my Alioth running the Xaiomi.eu ROM. Reactions: bggold Pretty much, it may not necessarily be every time depending on your setup. Adds about 10-15 seconds to your routine. Google really doesn't want this to keep working on newer versions. There doesn't seem to be a permanent solution at the moment without giving up a bunch of functionality by completely blocking everything. It seems very ROM/device dependant though. Ie my Whyred running lineage works more consistently than my Alioth running the Xaiomi.eu ROM. Ok, this for you reply. I wonder if clearing data for AA would make it necessary to patch it again with the tweaker. Obviously, not. But still, could it be so? I think it patches the play services database and not the AA one, I forgot to check the logs the last time I did it. If you clear play services database and not the AA one, I forgot to check the logs the last time I did it. If you clear play services database and not the AA one, I forgot to check the logs the last time I did it. If you clear play services database and not the AA one, I forgot to check the logs the last time I did it. If you clear play services database and not the AA one, I forgot to check the logs the last time I did it. If you clear play services database and not the AA one, I forgot to check the logs the last time I did it. If you clear play services database and not the AA one, I forgot to check the logs the last time I did it. If you clear play services database and not the AA one, I forgot to check the logs the last time I did it. If you clear play services database and not the AA one, I forgot to check the logs the last time I did it. If you clear play services database and not the AA one, I forgot to check the logs the last time I did it. AIO is using. You could always try and report back though. My posts will likely become less frequent after this week. I'm preparing to head on the road for work, for a couple of months. So I won't always have an AA enabled vehicle to test on unfortunately. Edit: I tried it for you. Repatching clears my S2A data which is even more annoying than

clearing AA data every time it disappears IMO because I'm sure it will still disappear later at an inopportune time, but we shall see. Edit 2: It still won't come back after clearing AA data now, so I quess there is your answer -- at least when it comes to the Xaiomi.eu rom I'm running on here. I'll have to uninstall everything and start again with AAEase likely. Edit 3: Got it by deleting the triggers within the AA unlock tab in S2A's Other section, and repatching with AA AIO again. I did have to clear Play Services as well for the patch to make it actually show up again. So I wouldn't recommend going the repatch route unless you really have to. Last edited: Mar 5, 2022 Reactions: tiho5 I use AA and S2A on a Samsung Galaxy Note 10 Plus. This phone is still on Android 9 and it is rooted. I had AA 7.0.614134, which stopped a day ago and asked for updated AA-AIO-TWEAKER to ver. 5.0.2 In AA-AIO-TWEAKER I selected "revert everything", rebooted and patched again. Patching indeed wipes data of S2A and AA. Then I set my settings in AA and S2A and it is now working again. Second day. The only problem I started having is that the FORCE DISABLE WIDESCREEN stopes working and after some time I start seeing the second/double screen on my car's display. Reverting and applying FORCE DISABLE WIDESCREEN doesn't change it back to single screen. I hate that as I want only a single screen AA and Any advice is welcome on how to get this to work.

I will double post this in the AA-AIO-TWEAKER thread. But I wanted to report this here too and the fact that on Android 9 S2A works as it should with the latest AA. Page 20 I have tried the above method, clear AA CACHE can not re-use S2A, but also need to repeat to S2A permissions, 3 kinds need to reset. It's too tedious. I gave up. Since I am in China, GOOGLE map and WAZE are not available, I need DA to use the navigation software, I expect the developer to solve it soon. I am wondering if you have made any progress. Could you please share any news? Yes. I had moved on to some other projects over the past few weeks, but yesterday I downloaded the latest version of AA 7.4. At first S2A did not work, but after fiddling around with some settings I got it to appear in my car and it seems to function properly at least with YouTube which is all I care about. The only thing I did differently from before was in developer settings I set Application Mode to Retail. And I rebooted my phone several times and rebooted my car too, and S2A reappears and functions properly. I did not have to clear data in AA each time. Fingers crossed, we'll see if things are still working tomorrow. Reactions: mik101, SOFO888 and tiho5 Yes. I had moved on to some other projects over the past few weeks, but yesterday I downloaded the latest version of AA 7.4. to appear in my car and it seems to function properly at least with YouTube which is all I care about. The only thing I did differently from before was in developer settings I set Application Mode to Retail. And I rebooted my phone several times and rebooted my car too, and S2A reappears and functions properly. I did not have to clear data in AA each time. Fingers crossed, we'll see if things are still working tomorrow. Did you use AIO 501 or 502? I have V.5.0.2 And for the record, I did have to clear data in AA to get S2A up and running today. But that is all I had to do. It only takes a few seconds so not too big of a deal. Last edited: Mar 8, 2022 Reactions: tiho5 and mik101 can anyone explain how i can turn off the phone screen without the screen going black on the car unit? i understand its

mirroring but it would be nice not to have the phone screen on all the time, can anyone explain how i can turn off the phone screen without the screen going black on the car unit? i understand its mirroring but it would be nice not to have the phone screen on all the time. Screen Settings -> Overwrite screen brightness, make sure it is enabled and set it to 0. If it doesn't work on your device, then it's likely a bug in S2A or your rom/device deals with screenbrightness in a non-standard way. (Like how the OBD2 Torque app ignores the system wide rotation settings). You may also have the Enable Blackout Screen option at the bottom enabled. Turn that off unless you really need to dim the head unit (GU screen). On that note, does anyone know what "Monobrow" is supposed to be the English translation for from Russian? I'm guessing it's supposed to be "header" or "status bar" or something, but I haven't had a chance to play with it to see what actually changes. Everything is working great here on AA 7.3.620514 other than a small black gap on the left edge of the screen when using YouTube Music Vanced in tablet mode. Obviously YTM isn't supposed to support tablet mode on phones anyway, so I'll take that as a win. I'm guessing it's due to my screen ratio since this phone is 2400x1080. Everything else seems to scale fine to the low resolution panel Toyota is currently using in E210 Corollas. Last edited: Mar 8, 2022 Screen2Auto -> Screen Settings -> Overwrite screen brightness, make sure it is enabled and set it to 0. Everything else seems to scale fine to the low resolution panel Toyota is currently using in E210 Corollas. Thanks for your response. I will give that a try and see how it goes. I wouldn't know what the monobrow option is at this stage but you might be on the money with that one. Most likely header or status bar.

It would be good if i could get netflix working! it plays and you can see all the controls on screen but the monobrow option is at this stage but you might be on the money with that one. Most likely header or status bar, It would be good if i could get netflix working! it plays and you can see all the controls on screen but the media doesnt show. No problem. I hope it helps. I also enable the touch button with double tap to return to the S2A launcher. On that page you will see a button that looks like a phone. That is how you can turn your phone screen from blacked out to enabled if you need to make any changes while the phone is still plugged in. Yeah that's the DRM on mentioned earlier in this thread, but unfortunately it doesn't work for me either. Though I should try it again now that I have more bugs worked out on my device. Edit: The version mentioned was Netflix 7.99.0 build 14 (35427) Reactions: tiho5 Is the screen in your vehicle actually wide screen? It doesn't work properly in my 21 Corolla for example because it isn't. Hello. I don't know the relationship it has... I'm going to measure it, but at first glance it looks rectangular. It's a shame that this function doesn't work. I am pulling my hair out over apps disappearing in AA. I have a non-rooted lg G8 ThinQ android 11 aa 7.3.6. In Feb/22 I used AAAD and everything worked fine (and still is) but without root I don't have touch so I went out and got a moto G7 rooted with lineage/Magisk android 11, choose the same steps and I can only get it to work 1 or 2 times before I lose the apps. I have used LSPosed/HMA to detach play store (successfully) and tried to load aa 6.9 and 7.0 but both ask to update as soon as I turned off airplane mode. I have also tried aaTweaker 5.02 and AAease 0.4, nothing works. Any suggestions would be very helpful, all I want to do is mirror with touch. I don't understand why the non-rooted phone worked and the last 20 pages of this thread as well a googling all over the net and nothing seems to work for me. Thankx for any help someone can provide, J Last edited: Mar 13, 2022 I connected my rooted S10 on Android 10 to the car for the first time in quite a while, and last time I had a working S2A with touch and all. When it started up it said I had to update AA to run it. The weird thing is that the phone is a dedicated AA phone (I use a Huawei P30 myself, but that can't be rooted in any sensible way with good working results) without a SIM card, and it should not have an internet connection. In the car (a fully electrical Mercedes EQC) it's connecting by wifi to a Pi running the media player software (J.River Media Center), a wifi router and a Mercedes Me integration for Home assistant. That Pi is connected to yet another Pi running OpenWRT. This ping from Hass. So there are only three possibilities: 1. AA connects for updates by IP addresses not an address that needs DNS. 2. The phone managed to connect for a few seconds to the home wifi when I was parked outside before it jumped to the much stronger car wifi. 3. There is a time bomb in AA that makes it demand an updated after a certain time. Can somebody please tell me which is the corrrect answer here, so I can avoid it? And can I get rid of the problem?

I did the upgrade, used Settings/Apps to remove all updates, disconnected from the net and reinstalled the working version, but it demanded an update again, even without wifi activated, so either it's a time bomb or it remembers that it wanted an update from before. Reactions: sosimple As far as I know all Google apps have a time bomb. Also most banking apps have time bombs. @SOFO888 Aha, thanks! That would explain it. I've been using 7.0.614174, since that's the one I managed to get working with touch, but I guess that's beem time bombed now, then. Lucky Patcher actually calls it "Cloning". There are also other apps like ApkRenamer and Apk Editor Pro, but haven't tried them. An example of cloned app, that has been renamed to ru.inceptive.screentwoautp using Lucky Patcher has injected anything malicious in the apk, I hope not, I'm also using the apk \*\*): Could you please attach the renamed file again because the link to be able to download it has expired, I would also need the renamed file because with lucky I was not able to do it. So Ive been easily able to reproduce the problem of AA removing the apps. Setup (Im not 100% sure which is relevant, so including everything. Please see my setup notes below for further info on stuff I did that probably didnt change anything, but may have): Pixel 4 XL Android 12, January 5 2022 Security Patch Rooted Magisk 24.1 Google Play system update 12 ProtonAOSP Version 12.2.1 com.google.android.projection.gearhead 7.2.60124 (I do believe I was able to reproduce on 7.3.620503-release, but I needed to pee and im sick of walking out to my car) AAAD 1.4.3 AA AIO Tweaker 5.0.2 Screen2Auto VERSION AAStream 1.1.0.29 AAEase 0.4 SeLinuxModeChanger set to passive Google Play Services 22.02.21 Google Play Services 22.02 Go Launcher Button' on the phone app or are displaying in car display apps (Only confirmed with Screen and AA Stream, so kill those two for sure) Launch Android Auto in car - S2A and AA Stream should still be there Open one of the display apps. I couldn't get AA Stream to work in Android 12, however it was still able to reproduce this error by just being opened. S2A was able to run and display my phones screen Disconnect phone Kill Android Auto app. This is the primary cause. When Step 4 of opening the display apps, combined with a fresh instance of Android

This can also be verified as it is NOT listed under the 'Customize launcher' Note though they are still under the bottom of the phone app, but are not on the launcher Partial Fix - If you are able to reproduce the above steps, the fix is moderately easy Kill Android Auto Clear Storage on Android Auto Reopen app (may need to repeat this process twice, but I have had success every time You will need to reconfigure AA on your phone, but a portion of the permissions will be saved, saving some time (should do at a stop for safety and to not worry about speed limitations on phone) Better Partial Fix Using Titanium Backup (UPDATED) - still testing this, but seems to have worked Complete previous steps to make sure Android Auto shows Screen2Auto under the 'customize launcher' Disconnect the phone from car Make a titanium backup of the data (and application) Next time the issue occurs, Kill Android Auto (make sure to force close, not just in the task manager) Restore data for Android Auto using Titanium Backup Relaunch Android Auto (I did this on the actual phone, not plugging in). I did have to force close again and reopen again to get it to work properly after restoring the data. Verify that 'Screen2Auto' shows up under customize launcher and/or is on the main AA screen in your car (Explanation) The reason this is better is 2 things: Its very fast within Titanium to force close, restore data, force close, then open app. Possibly you could even make a tasker shortcut to do this. This makes it a lot less clicks, and makes it a ton faster. It should still maintain your permissions for AA. This part I'm still verifying. Im a bit annoyed I have to keep deleting the data, and haven't seen a better solution. Please if anyone has one let me know. Possibly with my updated Titanium solution, there might even be a way to make a tasker function that Force Closes AA -> Restores Data -> Force Closes AA -> Record is made to a car. Or by looking into what is different about the data in both situations, the flag that AA is putting into the data that a DrawOverApps file was used or whatever could be investigated, Special Notes -I have tried using Detach3 through Magisk, the log said it installed correctly -I used a separate app to disconnect my AA from the play store, using both methods provided. This app is on the XDA forms, but the creator asked it not be associated with circumventing AA. Think albert einstein though -I have no idea if SeLinuxModeChanger helps, I had AA working flawlessly before moving to A12, and I had it installed previously, so reinstalled -I have tried the above options with installing through AAAEase, and through AAAEase, and through AAAEase premium I updated my notes to include a slightly faster solution using Titanium Backup. Someone who is more familiar with actual android code possibly should look into what the actual flag file/data is that AA is adding that causes S2A to disappear, and maybe we can make a Magisk module or something to block that.

It seems that S2a can not be used on a rooted phone right now (Android 11), no mater what I do it disappears after about a day. 6.9 and 7.0 both ask for update, 7.2 worked the longest at a full day but still stopped. I was able to install 6.9 in airplane mode and setup AA but as soon as I gave it internet it asked for the update. My rooted phone(s) both work fine with a simple AAAD install, the LG ThinQ will not work with touch buy I have a Samsung A50 that will so am trying to set it up as a 2nd phone using S2echo (no sim in 2nd phone) which leads to my next post.... so has anyone used S2echo? unless I am missing something it's completely in Russian, I did some translation of the setup page and am attaching it here in hopes it helps someone. Seems straight forward except I don't understand the Bluetooth function, it's a dropdown that shows all my paired devices and says it's for internet but it's using a wifi connection so not sure why Bluetooth is also needed. In S2a the setup has activate and Wifi where it just comes up with a white box, no wifi networks there to select. So that is where I am at, does not look like it is working yet, is it for someone else? Have installed AAAD and S2A (V3.6.2) and the other apps offered by AAAD on a SAMSUNG Note 9 with Adroid 10. AA has version 7.3.6. The phone is not rooted. When I attach the phone via USB to the head unit (VW Discover Pro MIB 2.5), I can start S2A.

I can also start an app at the head unit, but I can not use the touch screen of the head unit in the apps. I need to operate the apps via phone screen.

In the head unit I can see everything and sound arrives also. But touch usage on head unit screen is not possible. Am I doing something wrong or is this not working yet? Can it or will it be fixed? Last edited: Mar 16, 2022 As far as I know all Google apps have a time bomb. Also most banking apps have time bombs. Easy fix, luckily. I upgraded the nagging thing, and nothing worked, of course. Then I disabled auto update and the phone's automatic time and date functions, set the date to October last vear, removed all updates from AA and installed the working version from last fall as an update (downgrading from the current version doesn't work. I had to uninstall updates from the menu in Apps). So now I have everything back working as it should. Reactions: sosimple Page 21 Easy fix, luckily. I upgraded the nagging thing, and nothing worked, of course. Then I disabled auto update and the phone's automatic time and date functions, set the date to October last year, removed all updates from AA and installed the working version from last fall as an update (downgrading from the current version doesn't work, I had to uninstall updates from the menu in Apps).

So now I have everything back working as it should. Can we do something with "per apps hacking" Allow set a fake time to fake an app to a specific time just like time machine. Time format is YYYY-MM-DD HH:MI i'll try with android auto 7.4 (magisk 23/riru LSposed) Don't work witk AA 7.4, i try with 7.06 Last edited: Mar 17, 2022 Reactions: sosimple Easy fix, luckily. I upgraded the nagging thing, and nothing worked, of course. Then I disabled auto update from AA and installed the working version from last fall as an update (downgrading from the current version doesn't work, I had to uninstall updates from the menu in Apps). So now I have everything back working as it should. My way to downgrade android auto was to install any older version of android auto. Just make sure you have system information about your phone while downloading the apk. Reactions: SOFO888 and Mastiff I had Android Auto version 6.1.6 which worked for last 9 months... But stopped working this month and wanted to update. The current version still not working either after upgrade. Downgrading to 7.0.6 works but AAextra doesn't work. (Need it to maximise the screen and reduce nav bar to transparent) So downgraded further to 6.7.6 and AAextra working.

With both 7.0.6 and 6.7.6 I keep getting the "get started" wizard when ever I wire up the phone, it then loads on the car headunit, anyway around doing that each time? I tried the date set-back with 6.6/6.9 and just get a head unit date error red screen, see attach. I tried changing the date in the car too but there seems to be no date support, just time and gps sync which I turned off. Also with the wrong date in the phone none of the web services work either as it breaks the ssl My way to downgrade android auto was to install SDMaid, with which you can deinstall android auto as an system app. After that I was able to install any older version of android auto. Just make sure you have system information about your phone while downloading the apk. Tried to follow your method but apparently Android auto is not installed as a system app on my op3t roooted with Magisk. I uninstalled AA anyway and reinstalled AA anyway and reinstalled as a system app on my op3t roooted with Magisk. I uninstalled AA anyway and reinstalled as a system app on my op3t roooted with Magisk. I uninstalled AA anyway and reinstalled AA anyway and reinstalled an older version but it's not letting me proceed without updating. Any ideas? Would appreciate any feedback A few weeks ago, the S2A app worked flawlessly. But then the problems started.

First, the screen did not automatically rotate from portrait to landscape mode, but then with the AA update, the S2A no longer wanted to work. When I activated S2A on the AA launcher, the screen reset every few seconds, and after some screen reset every few seconds, and after some screen reset. If anyone has a similar experience and has successfully solved it, please indicate how to restore a working system. So far I have all the apps (AAEase, S2A, AA patched with AA AIO Tweaker). Till now I allways successfully bypassed every google attempt to disable video or something similar on the car screen, and now for the first time I find no reason for what is happening. When I update S2A from 3.6.2 to 3.6.3 the app still shows 3.6.2 on an Adroid 10, Note 9 with AAAD and without root. Is that known and fixed? I had that too. You have to uninstall 3.6.2 and reinstall 3.6.3. I tried that also to uninstall first, but it gave the same result. Have you done anything else after uninstalling? Did you install via AAAD?

I tried also downloading apk and installed it but at the end is says not installed. Last edited: Mar 25, 2022 Hi Everyone ! As some of the community members, I am facing difficulties with a non-rooted phone (S22+, Android 12). The only problem I have is the touch which is not working (screen is well mirrored & sound OK as well). I haven't read any solution to this problem with a non-rooted phone. Is it even possible to make it work without root? Thanks in advance to everyone for your support. I tried that also to uninstall first, but it gave the same result. Have you done anything else after uninstall ing? Did you install via AAAD? I tried also downloading apk and installed it but at the end is says

not installed. I did not perform any additional activities. I patched 3.6.3 aa aio tweaker and it works. The phone is xperia xz1 android 9. I did not perform any additional activities. I patched 3.6.3 aa aio tweaker and it works. The phone is xperia xz1 android 9.

AA aio tweaker requires root, which I don't have. AAAD installed it. Is the update uninstalled it. Is the update uninstalled it. Is the update to 3.6.3 really necessary? What are the improvements then? I keep getting 3.6.2 installed, 3.6.3 not Reactions: mackus44 Page 22 Hello everyone, If you have s2auto 3.6.2 and use it with android 11 DO NOT update s2auto to 3.6.3 as I did because it no longer works. This latest version (3.6.3) was created to solve problems with android 12 and somehow compromises the functioning with android 11.

I have a xiaomi MI10T lite with root, AA 7 before doing damage and as said android 11. Everything was fine well before updating Screen2auto.

I did a downgrade of AA to vers 6.3.611314, and reinstalled 3.6.2 of s2auto, after patching with AA AIO Tweaker 3.4 but I didn't fix the problem. When I connect the phone AA asks me to update to 7, which I have already tried to do, but I no longer see Screen2auto on the Android auto screen .... does anyone have the solution? Thank you Reactions:

When I connect the phone AA asks me to update to 7, which I have already tried to do, but I no longer see Screen2auto on the Android auto screen ... ... does anyone have the solution? Thank you Aren't you using a bit old AA AIO Tweaker? Try with a newer version. In case you suddenly lose screen2auto from AA: Open AA AIO tweaker and unparch custom apps again. Reboot Screen2Auto Should be back in AA III class tried this way, removing the active patches from the programs, restarting Tweaker and then patching screen2auto again. Unfortunately the result is always the same. Hi, thanks to you too ... I also tried this way, removing the active patches from the programs, restarting Tweaker and then patching screen2auto again. Unfortunately the result is always the same. Clear Android Auto cache. Then go to playstore delete Android Auto and re-install Android Auto. Ok try install screen2auto. At a thank the patch that we have the total and the patch that we have the total and the patch to 
Not sure how this app installs 3rd party apps for AA but they show up on AA. It does even need rooted phone. If I knew I would never root my phone as I rooted only for screen2auto Reactions: fedele7n [ITA] Ok try install screen2auto does not need to be whitelisted within the app itself! And you dont get black screen that you may get even if you see and press the screen2auto will show up on AA. Even screen2auto does not need to be whitelisted within the app itself! And you dont get black screen that you may get even if you see and press the screen2auto on AA. Tried sygic the same way and both work on AA. It does even need rooted phone.

If I knew I would never root my phone as I rooted only for screen2auto You must be wrong. Root is needed. You cannot get screen2auto AA in a vehicle. Hmm, then maybe root is needed for a screen2auto anyway but not for other 3rd party AA apps. But use kinginstaller to install it to have it whitelisted and used in AA for ever You must be wrong. Root is needed. You cannot get screen2auto AA in a vehicle without root. I on Realme GT Neo 2 without root. I on Realme GT Neo

update. Reactions: sosimple I just got a new Pixel 6 Pro(Free, thanks Sprint.) Unrooted. Installed Screen2Auto using AAEASE. It works, screen mirrors and sounds works fine, but Touchscreen Not working. Have to control with phone. Anyone with a Pixel 6 have this working with touchscreen?

am still with android auto 7.5 bêta. i am not sure it's still necessary to detach android auto from playstore but i do... Last edited: Apr 9, 2022 Reactions: sosimple Hello, "Can you please explain how you deactivated the Play Store?" several software allow it, TitaniumBackup, OAndBackupX, Alpha BacKup ....

Will rooting make touchscreen work? Try to activate the "Automatic shutdown of SELinux" function ..... Open Screen2Auto- Other settings- and activate automatic shutdown .... You must be wrong. Root is needed.

You cannot get screen2auto AA in a vehicle without root. I on Realme GT Neo 2 without root cannot get screen2auto in the vehicle. I have screen2auto in the vehicle. I have screen2auto and have not had to reinstall or clear cache. Reactions: xlouk I am using latest AA 7 build. Installed with kinginstaller and screen2auto has not been removed since then. And again did not have to whitelist within the app. Rooted samsung. Any download links for first time installing? I had android auto 7.0.6..

and screen2auto was working. Now it ask me to upgrade (otherwise don't start android auto... I finally updated to Android auto 7.3.620524 and now lost screen2auto.. Any help?

What is the oldest Android auto which won't force me to upgrade, and screen2auto work? Thanks, Page 23 I had android auto 7.0.6

What is the oldest Android auto which won't force me to upgrade, and screen2auto work? Thanks, Page 23 I had android auto 7.0.6.. and screen2auto was working. Now it ask me to upgrade (otherwise don't start android auto..

If finally updated to Android auto 7.3.620524 and now lost screen2auto. Any help? What is the oldest Android auto which won't force me to upgrade, and screen2auto work? Thanks, Did you try my post right above yours. Installing with AAEASE? I already had installed screen2auto 3.6.2, with moded name by me, and was working fine. Will there be any difference if i re install screen2auto from there? It stopped working after forcing me to update android auto.. I already had installed screen2auto from there? It stopped working after forcing me to update android auto.. Not sure. I just got a new Pixel 6 pro and it has the latest Android Auto. Used AAEase and installed screen2auto and it's working. Although the touch screen doesn't work, probably cuz I'm not rooted. I just use a fire stick remote instead. AA version 7.3.620524-release Reactions: sosimple I have just installed Screen2Auto using AAAD and it works almost fine with my non-rooted Huawei P30 Pro and Android Auto 7.5.121304 on my KIA Carnival 2021 (KA4), except that I can't control any app with my car's touchscreen (screen2auto launcher is well controlled by the touchscreen though). Is that because of the non-rooted phone or is there a way to fix that w/o rooting? I have just installed Screen2Auto using AAAD and it works almost fine with my non-rooted Huawei P30 Pro and Android Auto 7.5.121304 on my KIA Carnival 2021 (KA4), except that I can't control any app with my car's touchscreen (screen2auto launcher is well controlled by the touchscreen though). Is that because of the non-rooted phone or is there a way to fix that w/o rooting? Same for me with my Non rooted Pixel 6 Pro. I just use one of my fire stick remotes, works great. I use Netflix 7.99.0 build 14 (35427) without any problems (search on apkmirror for it) and don't update on google playstore.

On my new Pixel 6 Pro with Android 12 the video doesn't show, black screen with sound? Is this a root issue, or Android 12? Last edited: Apr 7, 2022 The whole Android 4uto situation including the driving assistant mode and issues with AAWireless is for me the reason to stay on Android 10. On a Xiaomi Mi 9 Lite Xiaomi.eu 12.5.5 stable Android 11 Rom version of Google services Google voice working? (if by speaking it writes, not in android auto specifically but at least in notepad for example). Thanks, Xiaomi Mi 9 Lite Xiaomi.eu 12.5.5 stable Android 11 Rom versit do with xiaomi note app, after flashing NikGapps-Addon-11-AndroidAuto-202

Reactions: SOFO888 Hello, "Can you please explain how you deactivated the Play Store?" several software allow it, TitaniumBackup, OAndBackupX, Alpha BacKup ...... I don't 'deactivate' bcs I need it, but detach AA from Playstore (it doesn't see it as installed, hence does not attempt to update) The method (root required) by using LSPosed + Hide My Applist was described here sometime in Nov or Dec - you should scroll back and find Reactions: SOFO888 and sosimple Xiaomi Mi 9 Lite Xiaomi.eu 12.5.5 stable Android 11 Rom yes it do with xiaomi note app. after flashing NikGapps-Addon-11-AndroidAuto i am still with android auto 7.5 bêta. i am not sure it's still necessary to detach android auto from playstore but i do... I suppose you used lineage rom, or some rom without Google play services? I'm trying to do the same to galaxy note 8, but only lineage custom rom doesn't include gapps..

It's not the best rom.. I suppose there isn't a way to Uninstall gapps from original based roms. I didn't uninstall anything. I flashed NikGapps-Addon-11-AndroidAuto via recovery over the rom Xiaomi.eu 12.5.5 stable Android 11 for Xiaomi Mi 9 Lite . (not linéage rom) Reactions: sosimple I installed lineage 11 and Nickgaps for android auto, for note 8,

It's not the best rom.. I suppose there isn't a way to Uninstall gapps from original based roms. I didn't uninstall anything. I flashed NikGapps-Addon-11-Android Auto, for note 8, from here: Unfortunately android auto gives error 17 and doesn't work.. AIO TWEAKER, what exactly is needed? I see screen2auto and the other apps inside android auto, without it.. Did anyone test AA 7.5 yet? Results? I now use firewall AFWall+ which using root to completely cut internet from everything in phone. I give internet only to apps i want (vanced, iptv, internet radio etc). From Google, i only give internet to Google app to have voice recognition working. Playstore doesn't have internet, but also i freeze it in titanium. Let's see if mirroring will stop again in the future by forcing to update android auto..

Google play services doesn't have internet. Let's see..

I don't know if anyone had the above scenario, what happened months after.. Anyone with a Pixel 6/Pro or Oneplus 9 have S2A working with touchscreen controls?? I recently got both phones, neither are rooted. Installed S2A using AAEASE no problem and mirroring works, but no touchscreen response. I have to use a firestick remote to control apps

casting to the headunit. I've tried all the settings. Wondering if rooting either phone will enable touchscreen controls? Anyone with a Pixel 6/Pro or Oneplus 9 have S2A working with touchscreen controls?? I recently got both phones, neither are rooted.

Installed S2A using AAEASE no problem and mirroring works, but no touchscreen response.

I have to use a firestick remote to control apps casting to the headunit. I've tried all the settings. Wondering if rooting either phone will enable touchscreen controls? No phone working as it works. By enabling root you'll have touch. No phone working touch without root.

You are lucky working as it works. By enabling root you'll have touch. S2A on my unrooted Verizon Galaxy S7 is working with my car's touchscreen without root (I wish I could root the phone). Try the different touch options in S2A to see if they make a difference. I had to change mine to make the touchscreen work properly. Not perfect, goes into "hyperdrive". Last edited: Apr 12, 2022 Reactions: sosimple today screen2auto is gone for me. Booooh!!!! It's a never-ending story... Last edited: Apr 12, 2022 Try my method with AFWall+ and freeze playstore. I don't know if it will work forever but surely it will last longer i believe.. I will test but for me other firewall give an error while connecting to headunit. I allow wifi to android auto for "AAWireless" is working and enable to control LAN for all is working. Try to give internet to half of apps to see which is the one that gives you error.

Then half of the half.. etc. To find the one you should give internet so don't haven't the error. I Block play store, the play services updated itself... Reactions: sosimple Mod edit - translated by Here is my tested "working solution" from ScreenToAuto: (I

be able to use google maps and Youtube Music in my native language (Greek), which is not supported by Google Assistant. Do you perhaps have a solution to the lack of touchscreen functionality?

Is root necessary for this to work? Thanks a lot! Georgios I'm Greek also.

You won't solve this problem if you root phone and make touch work, at least in android auto. If you run sygic inside mirroring, if i remember correctly, you can use voice there. But not for maps / waze. I have solve the problem, and using everywhere Greek, or any other language, by using Tasker.

By switching keyboard, to google voice when starting android auto, and revert back to keyboard, when android auto goes off. This is the idea. But i have spent many hours to create the script (working only rooted), and i won't publish it for now. Maybe some time in the future i open a thread here explaining how. Of course, my problem was how to disable the automatic updates of the Play store, and I found the AuroraStore proposal interesting, but I solved it by disabling the updates directly from the play store. Here is my tested "working solution" of ScreenToAuto: (I state that I have a Xiaomi MI10T lite with Root) AAuto 7.4.620964 (but I think any version could be fine taking into account what is written below) Aease 0.4 (although designed for unrooted phones, it did its job with my rooted) Screen2Auto 3.6.3 P.S. about using AA is Tweacher (not used / not installed via AEase which evidently reads the "modified" package of s2a -I still removed the automatic installation for Google Play updates, so I can determine if and which updates to install works! Ok, so I found AAEase v0.4 on inceptive.ru: I see/understand now the date of the ownload Screen2Auto (also from installed CarTube by using AAStore: Currently I have the latest Android Auto but I have detached AA from Google Play by use of Hide My Apps (HMA, LSPosed money) although Close on disconnecting from Android Auto (I' pretty sure that it worked on my older phone) although Close on disconnecting from Android Auto (I' pretty sure that it worked on my older phone) although Close on disconnecting from Android Auto (I' pretty sure that it worked on my older phone) although Close on disconnecting from Android Auto (I' pretty sure that it worked on my older phone) althoug

Tweaker v5.0.2 aa block 3rdapp hack.sh Fermata v1.8.11 CarTube v0.3.2.2 Screen2Auto v3.6.3 Last edited: Apr 21, 2022 Reactions: Carmtinny Thanks a lot for the info!! I suppose it is not true. On my Samsung Note 9 I can use S2A and

operate the apps via touch of the car media system without root. You need some settings in S2A. Go to "Other settings" and enable "Alternative touch" and try the profiles.

For me Profile 3 worked best. Also enable "Automatic shutdown of SELinux". Touch will then be usable. Last edited: Apr 20, 2022 Reactions: RKCRLR On my Samsung Note 9 I can use S2A without root. When I connect it to the USB port of the car, I need to confirm 2 times, that AA may connect to the phone. Is it possible to to automate that? More troublesome is that mirroing is sometimes lost (screen stays black although touch on the darc screen reacts), when I switch between apps or the cars AA launcher and then replugging USB can be required. This can happen also on fist connection. Is a solution for that known? On my Samsung Note 9 I can use S2A without root. When I connect it to the USB port of the car, I need to confirm 2 times, that AA may connect to the phone. Is it possible to to automate that? More troublesome is that mirroing is sometimes lost (screen stays black although touch on the darc screen reacts), when I switch between apps or the cars AA launcher and then replugging USB can be required. This can happen also on fist connection.

Is a solution for that known? You could try tasker. But you need good knowledge to do that. Without root you will loose mirroring well.. That is the simple truth. And biggest problem, you will loose mirroring well. That is the simple truth. And biggest problem, you will loose mirroring well. That is the simple truth.

But you need good knowledge to do that. Without root you will never use mirroring well. That is the simple truth. And biggest problem, you will loose mirroring very often and always be in a situation needing to resolve things. I used it without root at past. I'll never try it again. I have an unrooted samsung Note 9 and wireless setup with a AA/carplay smartbox that piggbacks of my peugeot headunit. I downloaded S2A 3.6.2 with AA Ease and wireless mirroring works great for me. Can watch youtube, bbe iplayer and other media and works very well. It does time out on occasion especially on long journeys but I am satisfied with it and will not be upgrading S2A 3.6.2 to 3.6.3. Xlouk issues are probably phone to headunit compatibility /interaction issues. Page 26 one instruction that i have never figured out during the install of screen2auto. When setting up permissions it asks for states "And also give ere 2A" Disable cast warning" Adb shell appops set ru. "whatever S2A is renamed" PROJECT\_MEDIA allow From page 70 Post in thread 'Screen2auto - New app for AA smartphone mirroring (only for root devices). I've never seen that pop-up. I give all (six-seven?) permissions it asks for on the first run (but I don't recall did it ask for that one) (Maybe it depends on the ROM...) Btw, I see that PROJECT\_MEDIA was already allowed: :/ \$ su :/# appops get ru.ivniptcee.aserooutetncw Uid mode: COARSE\_LOCATION: ignore READ\_CLIPBOARD: foreground WRITE\_CLIPBOARD: foreground WRITE\_CLI

Haven't used custom Roms in years. Hi I have Screen2auto installed by AAAD on a non-deployed Sansung A02s and after launching it I must always confirm "start now". Is it possible to somehow set it to be automatically confirmed? Regards Last edited: May 4, 2022 Hi...I rooted an older phone and it has android 6.0.1. I did all the steps with installing AA... then S2A before opening AA and getting black screen on Netflix and others I started uninstalling and installing But now I cannot see S2A in AA to activate it for viewing on car screen.

Phone is a ZTE Z981. Root checker gives the congrats message that I'm rooted. Any help would be appreciated. Thanks Steve Hi I have Screen2auto and want to start another app, I also have

to press "start now". Is it possible to somehow set it to be automatically confirmed? Regards Hi I am using wireless AA/S2A 3.6.2 on non rooted samsung note 9. Under Setting Launcher I have the 'Permanent panel' option selected so that other apps are displayed in menu while a particular app is in use. On my car touchscreen this option allows me to select another app while other one is playing. It allows me to open that app and the first app will stop playing but it is open in the background and I do not have to restart the app. Last edited: May 10, 2022 Sounds like S2A can work on a nonrooted phone so I've installed an older version of AA and then installed S2A from AAAD. I've turned off auto updates for AA but the only way I could continue was to update. I get into the app fine but Netflix and other streaming apps still show black screen with sound. Am I missing something? I've seen posts saying it works on nonrooted phone so I've installed an older version of AA and then installed S2A from AAAD. I've turned off auto updates for AA but the only way I could continue was to update. I get into the app fine but Netflix and other streaming apps still show black screen with sound. Am I missing something? I've seen posts saying it works on nonrooted phones.

I have a Samsung S20 Ultra on Android 11. Any help would be appreciated. Thanks Using it on my unrooted Pixel 6 Pro. Latest Version of AA from the Playstore Android Auto Update. Touchscreen does NOT work after I launch an app, solved this by

using a Firestick remote. That said, apps with DRM like Netflix/Hulu/HBO Max, etc... do not mirror due to Android 10, but only Netflix version 7.99.0(build 14 35427). Hulu/HBO Max/ other DRM apps just black screen even on the

MoTo. I'd try CinemaHD, FilmPlus, or IPTV apps for TV and Movies. No DRM. Using it on my unrooted Pixel 6 Pro. Latest Version of AA from the Playstore and used AAEASE to install Screen2Auto.

Did Not have to reinstall Screen2Auto after last Playstore Android Auto Update. Touchscreen does NOT work after I launch an app, solved this by using a Firestick remote. That said, apps with DRM like Netflix/Hulu/HBO Max, etc... do not mirror due to Android blocking DRM video mirroring. Especially on Android 11/12. Netflix DOES work on my Rooted Moto Ace 5g with Android 10, but only Netflix version 7.99.0(build 14 35427). Hulu/HBO Max/ other DRM apps just black screen even on the MoTo. I'd try CinemaHD, FilmPlus, or IPTV apps for TV and Movies. No DRM. Thanks for the suggestion. Mainly I wanted to just make Netflix and others work but I'll try those others. my experience with Samsung galaxy s22 ultra NO ROOTED.

Installed screen2auto (ver. 3.6.4) and fermata auto last version via aaease; Android auto version 7.5.621 In screen2auto in laternative touch,,,and.....VOILA'-----all is perfect.

Touch Screen in my auto is like a charm, my auto is FIAT TIPO with uconnect service. my experience with Samsung galaxy s22 ultra NO ROOTED. Installed screen2auto (ver. 3.6.4) and fermata auto last version via aaease; Android auto version 7.5.621 In screen2auto i have unticked "AUTOMATIC SHUTDOWN of SELinux) Have ticked profile 2 (poco) in alternative touch,,,and.....VOILA'-----all is perfect. Touch Screen in my auto is like a charm, my auto is FIAT TIPO with uconnect service. Are you able to mirror streaming

apps like Netflix, Disney+, Hulu, etc? Are you able to mirror streaming apps like Netflix because of DRM. But people say that mirroring works with an older (and particularly that one) version of Netflix Hi guys, are there any new solutions to install screen2auto and be able to view it on AA? (Rooted phone) Last edited: May 24, 2022 starting from version 3.6.3, very often S2A changes the DPI of my Samsung S8 once started. Has that happened to someone else? I would say DPI: 420 --> 380
