

The Azure Planet Solutions, Year-One Inspection Program

- Services for New Construction & Beyond

Azure Planet Solutions Company is committed to maintaining effective, *hydro-ethical* water treatment programs using Non-chemical Device (NCD) technologies. Our goal is to make NCD physical treatment a primary choice for our customers and break the chemical-dependency mindset found in the traditional treatment industry. Our environmentally-sustainable programs conserve our customers water and energy resources while reducing or eliminating the toxic compounds which end up in municipal treatment plants and the natural environment.

Azure's in-house service technicians and network of like-minded Sustainable Service Partners provide both NCD and low-impact traditional water treatment consulting services and Water Treatment Management Programs to end-users and manufacturers. Installers and equipment representatives whom hire Azure for new installations and retrofits will find that we're a single source for equipment, startup services, and ongoing services that we find minimizes the potential for employing two companies with competing interests on the same project. We can provide:

Year-One Services (typ.)

- Monthly field services (typ.) for Cooling Towers/ Fluid Coolers/ Evap. Condensers, Closed Loops, Boilers, HVAC & Process Applications, Domestic
- Test/ review makeup & operating system chemistry
- Log equipment status
- Increase customer comfort with new technologies
