

Ninja Range Briefing

It is important for us to review a few issues for you so you will enjoy our facilities and avoid safety issues which may result in a loss of privileges at our facilities.

- 1) The Four Rules *are* actually carved in stone
 - a. ALL guns are ALWAYS Loaded
 - b. Never Let the muzzle cover anything you are not willing to destroy
 - c. Keep your finger off the trigger until your sights are on target
 - d. Be sure of your target (and what is beyond it)

- 2) We have additional muzzle restrictions at our range to the **west** and to the **north**. This includes your unloaded guns because from several hundred yards away, nobody can tell if the gun is unloaded. Especially the pilots.
- 3) Range Etiquette: *Nobody* wants to see your muzzle on a gun range. DO NOT turn up-range and move with your muzzle sweeping sideways *or at the aircraft*. Keep your muzzle pointed into a backstop or into the ground.

- 4) Stay inside the side berms of the range you are using. You may not shoot 75 yards at a 25 yard range without coordinating your activity with the office first. Conversely, you may not shoot 25 yard targets from the overhang on the 500. Maintain the use of good common sense.
- 5) Each uncovered bay has a **Safe Area** on one side berm. They are for function testing your gun and bagging it up to leave. **NO AMMO** is to be handled at a **Safe Area**.
- 6) **Target Height is Important!** Every shot fired needs to come to a final rest inside our range. Don't scoff. If your plan is to shoot prone or otherwise near the ground, do not place your head shot targets so the shots go over the backstop. Keep your targets down. Err on the side of caution.

- 7) Your vehicle is not a clearing barrel. Use a berm & watch your muzzle.

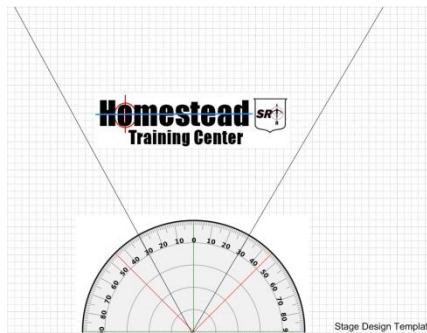

- 8) Be mindful of others on the range that may see you as an example for their own range conduct. *Set the example* rather than be the problem.

- 9) We have pistol only steel here on several ranges. We have Rifle Rated steel on other ranges. They are not interchangeable. If you decide to burn a hole in our steel, congratulations. You just bought it. It will look great in your living room. The same goes for our barriers and target stands. See our price list and deposit requirements.

- 10) The bays with wood covering the side berms may not be shot at directly by more than a 30 degree angle. See the range office to get a copy of the easy to use template that the range officers use to keep your common sense in check.

I acknowledge that I have read and understand the guidelines and rules regarding range rentals at Homestead Training Center. I understand that I am responsible to ensure these rules are followed.
