BEI Technology Solutions

Our Experience

Customer Engagement

When a DHA program office wanted to improve its systems to better support its end users, they needed a better way to communicate with its users across the globe. BTS helped develop program office develop the Customer Engagement team and the work-flows that enabled direct communication with the system users to get feedback of the current system, provide updates of system improvements and distribute latest system documentation.

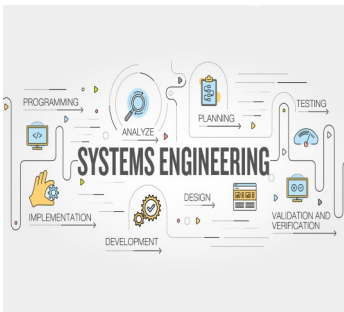

IT Operations

Defense Health Agency Solution Delivery Division (SDD) Operations supports the sustainment of multiple program office systems. BEI provided support for leading production troubleshooting, responding to Remedy trouble tickets, developing root cause analysis, managing Tier III vendor and stakeholders to develop long-term solutions and support the triage process.

Systems Engineering

BEI Technology Solutions provides systems engineering support to a program office within the Defense Health Agency. BEI provides engineering and technical management support including research, system architecture and design, development, integration, implementation, evaluation and testing of application, systems and networks.

IT Testing

Defense Health System supports over 60K users and 9.4M patients utilizing multiple integrated COTS components and has many external interfaces which created extensive testing requirements. BEI Technology Solutions analyses, resulted in consolidating environments which reduced the cost and kept environments updated with the latest version of the baseline.
