

MAINTENANCE

TIPS FOR YOUR RAILINGS

Tip #1,

For a quick cleaning, we recommend taking a damp rag with just water to the railing, this will be able to refresh the railing for the time being.

Tip #2,

For a more thorough cleaning, we recommend using water, a mild/non-abrasive soap, and a soft sponge.

This will help with more of the debris that wont budge, typically hardened and stuck on to the railing.

Tip 3#,

When choosing standard paint, it is highly encouraged that you dry the railing entirely after cleaning, especially around any hardware. This can be done using a microfiber towel.

Side Note: Painting over rust will not stop it from further developing. This is something we recommend watching out for, as with time this does jeopardize the integrity of your railing. It's important that when cleaning around those areas, make sure to dry fully to prevent more rust from staining the area affected.
