

New Certifications for Our Solar Pool Heating Panels!

Our solar pool heating panels, manufactured by our parent company — Magen eco-Energy have recently passed the updated OG-400 and NSF-50 certifications.

UMA Solar is proud to lead the industry by holding both of these certifications for our products!

ICC-SRCC OG-400 Certified

OG-400 certification of solar pool & spa heaters ensures that systems meet minimum requirements for safety and durability. Certified systems must properly integrate with pool designs and systems to ensure that critical safety protections for water quality, suction entrapment, and maximum temperature are maintained. For certification, ICC-SRCC staff review system designs, material specifications, installation manuals, and operation manuals.

Building officials look to the OG-400 certifications to provide proof of compliance with the standard and key third-party information for inspections. Pool designers and consumers seek OG-400 certification as a mark of quality, safety, and durability.

NSF/ANSI Standard 50 Certified

Certified to
NSF/ANSI Standard 50

The NSF mark is specific to the type of product it appears on — from dietary supplements, to water filters and dishwashers to plumbing components, pool equipment and more. Products bearing an NSF certification mark meet all standard requirements, including product testing and regular inspections to verify products continue to comply with the standard.

In this edition of NSF/ANSI 50 the following revisions were incorporated:

Issue 67 - Annex H When Annex H of NSF 50 was modified in 2005 the procedure eliminated the specific test method for ion generators. This revision reinstates a specific test method for ion generators as well as requires statements in the listing and use instructions that communicate disinfection capabilities of the certified systems.

Issue 71 - Batch chlorination systems: This revision updated the operating condition specifications in 15.2 for batch chlorination system components.
