NEWLY PATENTED PART *THE STORY...*

This all started a few years ago while I was on the road transporting cars...it was about 1am and I was coming out of Chattanooga Tennessee on I75. I was loaded with cars on my hauler when I had a bearing failure, and lost my trailer wheel and hub. It was dark out so I didn't notice at first, but by the time I did, I lost another wheel due to the shift in weight and the strain it put on the other wheel! Now I was stranded, loaded with cars and two wheels out of four missing. I was able to slowly exit the highway where I was stranded for 24 hours until my wife and mother could bring me rims, tires and hubs. Now, I have the skills to make this kind of repair myself, but for someone who does not, it can cost a lot of money for a service call. This got me thinking... why doesn't anyone offer a part to solve this problem?

Time went on and about seven months later I was in Miami, I came up to an intersection and apparently I had a bearing just starting to come apart. When I applied my brakes, the pressure of the brakes and the weight I was carrying caused the bearing to finish coming apart. My wheel came off and passed me, slamming into a light pole at the intersection but luckily no one was injured, and I am very grateful for that.

OVER 100K MILES IN R&D

What Trailers does it work for?

- Utility Trailers
- Dump Trailers
- Race Trailers
- Boat Trailers
- Jet Ski Trailers
- 5th Wheels
- Travel Trailers

Coming soon...

- Semi Trailers

WHY THE HUBSAVER?

After designing several prototypes, and putting them to the test, I came up with a design that was easy to install, durable and still allows for proper lube to the bearing.
