MODERN Motion

Halo

Powered Comfort with Advanced Support

Halo is a fully powered motion chair engineered for exceptional comfort, refined support, and effortless everyday use. Its ergonomic design features a smooth 360° swivel base and an articulated armrest, allowing users to tailor their seating position with precision.

A triple motor system, operated through a six button control panel, provides independent control of the backrest, footrest, and full seat lift function. This enables seamless transitions from upright seating to deep recline, zero gravity positioning, and assisted standing.

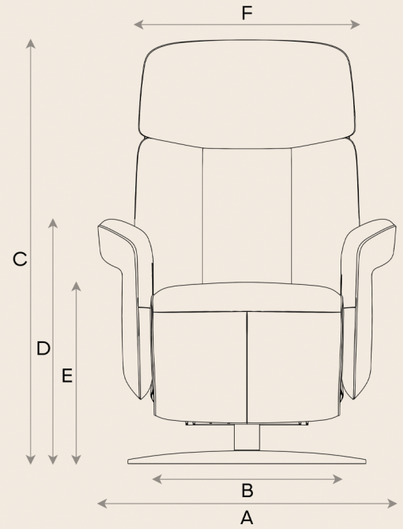

Halo can operate electrically or cordlessly when paired with the optional rechargeable battery pack. It is available with a wooden base and can be upholstered in fabric, leather, or customers' own material, offering complete flexibility in styling.

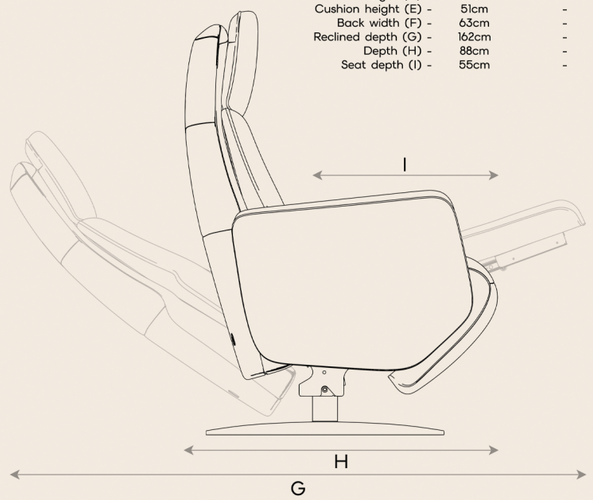

Halo dimensions

	Large Anyone above 172cm	Small Anyone under 172cm
Total width (A) -	84cm	-
