Core Competencies

NIST Risk Management Framework (RMF):

Expert implementation of NIST 800-37, 800-53, 800-60, and 800-171, to identify, assess, and mitigate risks, ensuring robust cybersecurity postures across federal and commercial systems.

FISMA Compliance:

Comprehensive support for Federal Information Security Modernization Act (FISMA) compliance, including Assessment and Authorization (A&A) processes, continuous monitoring, and regulatory reporting.

Cybersecurity Assessments:

Thorough security and privacy assessments, including gap analysis, penetration testing, compliance audits, and Privacy Impact Assessments (PIAs), to safeguard critical systems and sensitive data.

IT Consulting:

Strategic guidance to optimize IT operations, enhance system performance, and align technology solutions with business objectives.

Vulnerability Management:

Proactive identification, prioritization, and remediation of vulnerabilities using industry-standard scanning tools to reduce threats and strengthen security posture.

System Architecture:

Design and implementation of secure, scalable, and efficient IT architectures customized to client requirements

Project Management:

Application of agile and disciplined project management methodologies, led by PMP-certified staff, to deliver IT initiatives on time and within budget.

Choose LCMG

Certified professionals with deep expertise in NIST, FISMA, and industry best practices. Proven success in supporting federal agencies and commercial enterprises. Customized solutions to address unique organizational challenges. Commitment to quality, security, and client satisfaction.
