

So much more than a key...

The iLOQ S5 digital key makes life accessible in so many more ways than just opening the door, for example, to an apartment.

Practical information for key users

HOW DO I TAKE CARE OF MY KEY?

The key is self-powered – there is no battery to change. The power needed to open the lock comes from the motion of inserting the key into the cylinder. Made from robust stainless steel, it withstands hard wear, water and harsh conditions and operates reliably in a temperature range from -40°C up to +70°C.

I LOST MY KEY, WHAT SHOULD I DO?

Immediately notify the person responsible for key management. That key will be blocked from accessing the locks in the system. A new key will be issued, and the locking system will be updated with the latest information. The security level of the building is restored.

WHERE DO I GET A NEW KEY?

Contact the person responsible for key management. A new key can be quickly programmed.

WHY DOES THE LOCK NOT OPEN?

In the iLOQ S5 system, to increase security for residents or building users, access to some doors can be limited to certain periods of time.
