

# Refresh Your Hardware and Transform Your Business

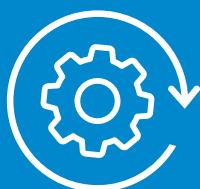

Every PC older than 4 years can incur more than \$1,700 a year in maintenance, repairs and lost productivity compared to a new Windows device. Older devices also leave you open to cyberattacks and data breaches that affect more than 50% of small businesses, costing more than \$84K per breach on average.

Not to mention that the way your employees work has changed over the past 4 years. By continuing to use the same devices and technology, you're limiting both your workforce and your business.

New Windows 10 Pro devices with 7th and 8th generation Intel® vPro™ processors help your business stay protected and your employees stay productive while on the go. With up to 25% more time efficiency, up to a 28% faster startup on average compared to Windows 7 devices, and a battery that lasts up to 3x longer than an older Windows devices, you'll find that Windows 10 devices are the foundation for the digital transformation you need to stay competitive.

### Get more done.

Your employees save time by working in the way that's most natural for them: from touch to pen to voice. Your older devices can't do that!

### Protect what you've built.

Windows 10 Pro has built-in defenses against modern security threats and always-up-to-date protection for your information and device, no matter where you or your team go.

### Enjoy simple, flexible management.

IT admins estimate a 20% reduction in IT management time with Windows 10 Pro. Plus, you can keep using many of your current apps and peripherals with Windows 10 Pro.
