Injector System Cleaner

RUPEDL W-221 Injector System Cleaner

Ultimate Fuel Injector Cleaner (For Gasoline Vehicles Only – Not for Direct Injection Engines)

Gasoline in Taiwan contains high levels of sulfur and gum, which can easily clog injectors, forming sticky transparent webs, black carbon deposits, and yellow sulfur powder.

This buildup leads to higher fuel consumption, reduced engine power, black smoke emissions, rough acceleration, and even engine hesitation! Our brand-new high-concentration formula is professionally developed conditions, driving habits, and fuel quality — tackling stubborn deposits head-on and restoring your car's best performance with just one bottle!

Top 5 Features :

- I. Deep Clean for Injectors & Intake Valves: Powerfully dissolves carbon buildup and gunk.
- II. Cleans and Lubricates at the Same Time: Protects components while cleaning, preventing future blockages.
- III. Restores Optimal Air-Fuel Ratio: Brings back lost power and efficiency.
- IV. Flexible Dosage: One bottle treats 10 to 60 liters (2.6 to 15.8 gallons) of gasoline depending on your vehicle's condition.
- V. Easy to Use: Simply pour into the fuel tank before refueling — no tools, no hassle!

Important Tips :

Check the cleanliness of your fuel tank and replace the fuel filter if necessary before use.

Do not use together with regular fuel additives (like water removers), to avoid affecting the cleaning performance.

Keep out of reach of children, avoid ingestion, and store away from flames — this product is flammable.

Let your engine breathe freely and unleash its full power! Start with a cleaner, stronger fuel injector today!
