Manufactured exclusively for UniqueTek by Venting Cloud, LLC.

Item No: T1793-01 & T1783-02

These Debris Catchers capture the polishing media and other debris that falls from the drain holes in the bottom of Dillon Precision Casefeeders. Each Debris Catcher holds just over 1 Teaspoon of debris. The translucent window allows you to easily see the debris level in each catcher.

Installing Debris Catchers:

1. Clean surface of Casefeeder where the Debris Catchers will be attached using Rubbing Alcohol and then let dry.
2. Peel off the protective film on the Alien Tape™. Do not touch Alien Tape™ surface with your fingers.
3. Press Debris Catchers onto Casefeeder immediately below drain holes.

Emptying Debris Catchers:

Although each Debris Catcher easily holds 1 Tsp of debris, it is recommended to empty the Debris Catchers when they are about 1/2 full. This greatly reduces the possibility of spilling debris when detaching the Debris Catchers from the Casefeeder.

1. Gently twist Debris Catcher to release grip of the Alien Tape™. Do not pull straight off
2. Empty debris from Debris Catcher.
3. Reattach Debris Catchers to Casefeeder.

Cleaning Alien Tape:

If the Alien Tape™ does not want to reattach securely, clean the Alien Tape™ surface with plain water.

Allow to dry thoroughly before reattaching to Casefeeder.

Do not use paper towels as this will contaminate the Alien Tape™ surface with paper residue.

Also clean surface of Casefeeder.

Alien Tape of a trademark of E. Mishan & Sons, Inc.
