

# Pegboard Case Gauge Racks

These Pegboard Case Gauge Racks are perfect for keeping your case gauges close at hand for immediate use.

- Each Rack Holds up to 4 Case Gauges\*
- Holds Both Pistol and Rifle Case Gauges
- Made from non-abrasive PLA Plastic
- Mounts on Pegboard with 1/4" Holes†
- Can also be used for storing Primer Pickup Tubes and Primer Magazine Tubes.

## Installation

1. Clear a space on your pegboard that is at least 8 holes high. If installing 2 or more racks for case gauges, leave 1 column of pegboard holes between each rack.
2. If needed, enlarge the pegboard holes using a 1/4" drill bit. You only need to enlarge the 4 holes that will be engaged by the 4 pins on each rack.
3. Install the racks by inserting the top pin first, and then rotating the rack down while inserting the remaining 3 pins.

\* The posts are 1.5" L x 0.25" Dia. and hold most rifle case gauges and pistol case gauges larger than .25 caliber.

† Smaller pegboard holes (e.g., 3/16") can easily be enlarged using a 1/4" drill bit.

^ I prefer using a 7/32" drill bit as the racks fit a bit tighter in the holes.

These Pegboard Case Gauge Racks can also be used for Primer Pickup Tubes and Primer Magazine Tubes.

## Installation for Storing Primer Pickup Tubes

1. Clear a space on your pegboard that is at least 8 holes high and 16 columns wide (the length of a Primer Magazine Tube).
2. Count 4 columns in from each end (so there will be 7 unused columns between the two racks).
3. If needed, enlarge the pegboard holes using a 1/4" drill bit (or 7/32" as mentioned previously). You only need to enlarge the 4 holes that will be engaged by the 4 pins on each rack.
3. Install the racks by inserting the top pin first, and then rotating the rack down while inserting the remaining 3 pins.

## Q&A

**Q:** Can these racks be cut down if I only need 2 or 3 rows?

**A:** Yes. But 2 rows are the minimum as you must have at least 1 pin below the top hook to secure the rack to the pegboard.
