

## Boggus Deal Winchester Model 12 Shotgun Firing Pin Installation

1. With bolt removed from shotgun, remove the firing pin retaining screw.

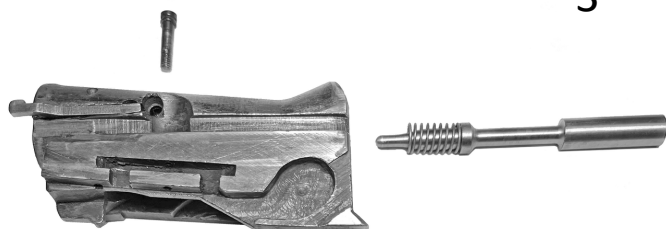

2

2. Remove firing pin retractor and spring. Remove original firing pin. These pieces will not be used.

3

3. Install new firing pin and spring into bolt and make sure firing pin floats freely and does not stick. Some bolts have a burr around the firing pin hole that needs to be removed with a small round file. Once you have verified the firing pin floats freely, reinstall retaining screw.

4&5. Now for the optional part! Not necessary but it does make the gun run smoother. Using a small pin punch, remove bolt retaining lever pin. Pry out the lever.

Reinstall the bolt in the gun and reinstall the trigger group. Drop the hammer and install the barrel assembly.

It's ready to shoot!
