## 3-Way Valve

### Item: **LAV-3WAYVALVE**

Our three-way brass ball valve has a T-full port and three 3/8" Hosebarb connections. This valve will hold a vacuum in your system, isolate the vacuum pump to prevent oil backup, and release/bleed air back into your system all in one. An external vacuum gauge can be connected to the third valve to take a system vacuum reading isolated from the vacuum pump.
