

IV CBD

also known as cannabidiol, is one of the many cannabinoids, or compounds, found naturally in the hemp plant.

It is also one of the most popular cannabinoids on the market.

Here are a few facts about CBD:

CBD IS *NOT* PSYCHOACTIVE

which means it can't get you high and is completely legal in the US.

It's a completely natural ingredient extracted from hemp grown in the US.

Our CBD contains **ZERO** THC.

It interacts with your body's endocannabinoid system, a cell-signaling system within your body that helps regulate many of its natural functions.

Many users report that it helps support their body's natural homeostasis.

It's been a popular supplement used in tinctures, capsules, ointments, and now IV therapy.

It was first isolated and discovered in 1940.

FACTS ABOUT IV CBD THERAPY

CBD IV Therapy is transforming the CBD industry and the way you can experience the benefits of CBD.

Maximum Absorption

Most methods of CBD usage have varying levels of absorption, whether that be ingestion, topical and sublingual. While it is still enough for you to experience the benefits, your body will only absorb a percentage of the total dose.

By utilizing water soluble technology and a CBD intravenous (IV) solution, users can experience nearly 100% absorption of the CBD extract.

Completely Sterile

The challenge with CBD has always been getting the molecule small enough to be properly sterilized.

By pioneering new technology, we're able to reduce the CBD molecule down small enough to pass through a sterile filter for a safe and sterile IV Therapy.

Combination IV Therapies

While CBD IV Therapy can be used on its own to experience the benefits, it can also be combined with various other IV therapies to create a more full effect.

Speak with your provider today about what combination might be right for you.

- ✓ Improved Sleep-Cycle
- ✓ Acute & Chronic Pain Relief
- ✓ HUGE Anti-Inflammatory
- ✓ Relieve Anxiety
- ✓ Lower Depression
- ✓ P.T.S.D.
- ✓ Reduce brain fog

CARE GUIDE INSTRUCTIONS

Those who have received PICO IV CBD treatment have reported that taking a hot shower offers significant relief from chills and discomfort.

Understanding the impact and potential side effects of CBD intravenous is paramount for promoting holistic body health.

It is essential to note the following:

Individual Differences

Each individual's endocannabinoid system varies, leading to unique tolerance thresholds to cannabinoids.

Bioavailability Impact

Because of this interaction and varying overall health and toxicity levels, some individuals may experience side effects from CBD.

Observations Post-Infusion:

- Potential side effects of PICO IV CBD, if they manifest, typically appear 4-8 hours after the infusion.
- If experiencing these side effects, we recommend taking a hot shower or warm bath to minimize the effects.
- Please contact your healthcare provider with any concerns while experiencing side effects.

Potential Side Effects of CBD IV:

- Chills
- Fever
- Detoxification symptoms
- Minor aches and pains

Description of symptoms:

Minor Cases

Aches and Pains: It's observed that CBD may intensify discomfort in already compromised body areas. Such discomfort usually peaks the night of the infusion and might continue the next morning. By the subsequent night or morning, these pains typically diminish considerably.

Chills: A sensation of feeling cold.

More Severe Cases

Detoxification Symptoms: A minority of patients might experience hot/cold flashes, slight fever, aches and pains, which can last between 3-24 hours. It is advisable to rest and allow the body to recover.
