

COMMERCIAL GRADE BRICK CLEANING MACHINE

LET THE MACHINE DO THE WORK

The BCM is developed and manufactured in Australia using high grade aluminum for its strength and lightweight benefits. This purpose built machine removes old cement/lime mortar and cement based adhesive from bricks, blocks, pavers and tiles in order to restore and re-use them. Using the incorporated torque vibration head with the replaceable spring steel blades it effortlessly removes the existing cement/lime mortar without breaking the oldest of bricks. Wire cup brushes scrub the brick surfaces to reinstate their former natural glory to appear as they did when they were originally hand made.

CONSUMABLES

	170mm flat
	170mm notch 1
	170mm notch 2
	50mm frog

STANDARD COLOURS AVAILABLE

TIMBER BOX FOR FREIGHT
