*NEUTRAL NOISE - OEM H-D 6-speed transmission sets may incur increased "Neutral Knock" condition with the Man O-War motorsprocket. It is caused by gear lash & high mileage transmissions and occurs while clutch is not engaged and transmission is in a Neutral state. Although audible, it is determined that this condition is a by-product of tighter tolerances in the primary system and loose tolerances in clutch or transmission. ***Clutch packs can help in absorbing engine pulse and there-by reducing inherent transmission lash noise at idle.***
