

AI-Native Value Architect Course

Why AI Proficiency Is Now a Business Imperative

AI isn't a side project. It's the new foundation of how organizations compete, deliver, and grow. Whether enabling smarter workflows, unlocking insights, or redesigning services, AI is transforming work at every level.

But tools alone won't close the gap. Enterprises need fluency—not just access.

- 87% of organizations face an AI skills gap that threatens productivity (Gartner)
- 69% of CEOs see AI as essential to growth—but only 22% say their teams are prepared (PwC)
- AI now impacts customer experience, operations, and innovation—not just IT

The ability to understand, apply, and lead with AI is now core to workforce success.

Translate AI Potential into Real-World Business Results

Audience Scrum Masters, Release Train Engineers, SAFe Practice Consultants, and Product Managers

Format 2-day instructor-led, project-based experience that equips you to run the AI-Native Solution Lifecycle end to end—guiding a cross-functional team through a real initiative in the room, from first signal to a production decision.

Outcome Participants step into the AI Value Architect role: able to lead cross-functional teams through identifying, shaping, and delivering high-value AI opportunities. They'll build the capability to guide work from early discovery into sustained business impact.

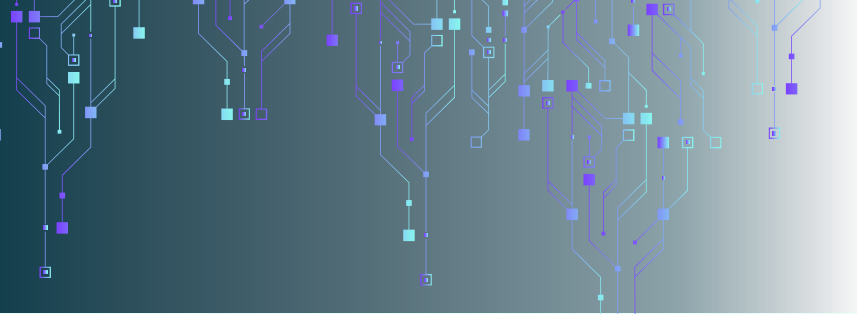

What You'll Learn

- Recognize the five failure modes that stall AI pilots—unready data, unplanned operations, unbounded risk, unengineered adoption, and unmeasured value
- Run the AI-Native Solution Lifecycle—Sense, Discover, Design, Deliver—to move an initiative from first signal to a production decision
- Translate AI concepts into business language that engages non-technical stakeholders and secures sponsorship
- Build the AI-Native Solution Charter, Value Blueprint, and implementation plans that accelerate execution

Business Impact

- Closes the AI execution gap by enabling leaders to move initiatives out of the POC graveyard and into production
- Improves alignment between business, tech, and leadership to reduce rework and delays
- **Establishes a repeatable network of Value Architects** across the ART for launching and scaling AI solutions enterprise-wide

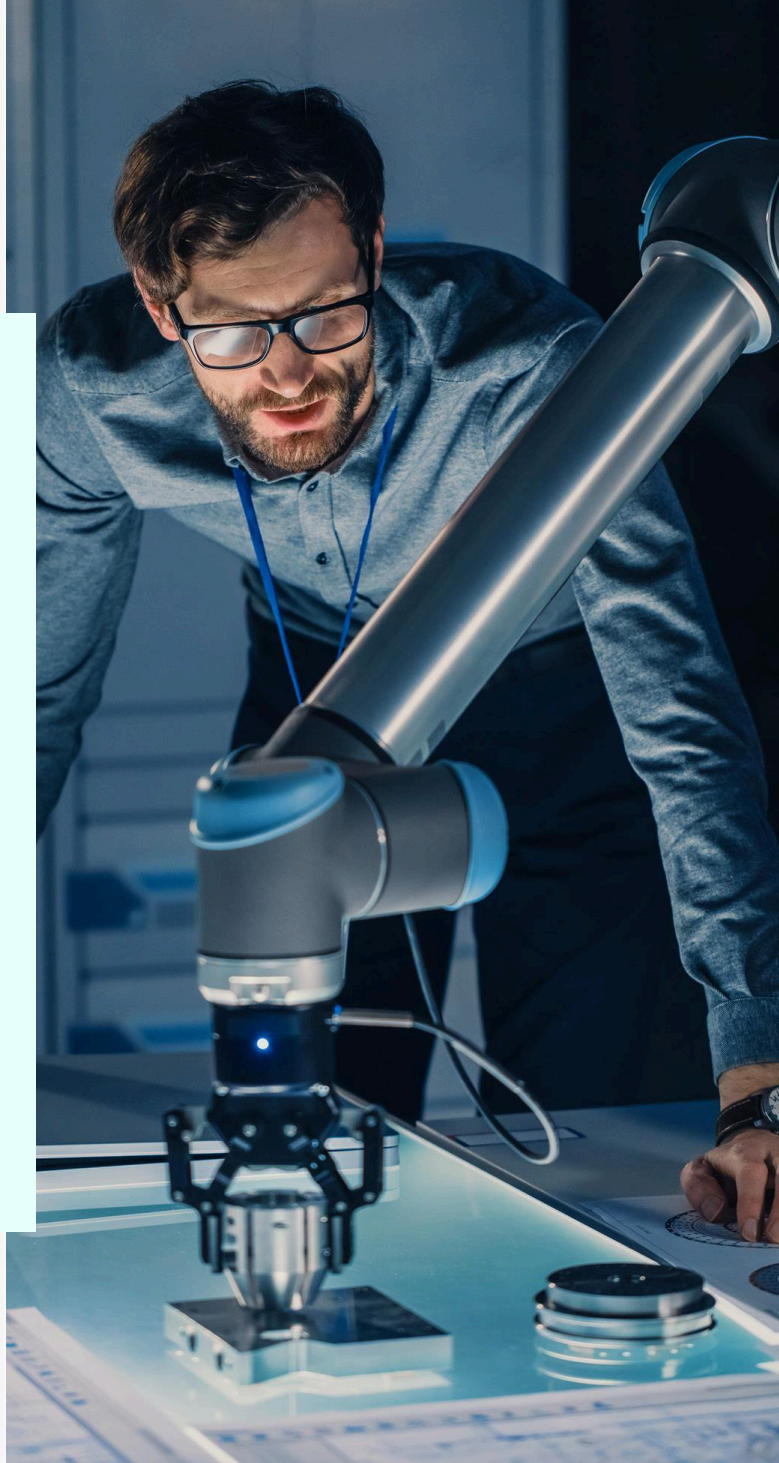

Why Scaled Agile for AI Training?

Trusted Expertise. Proven Scale. Enterprise Impact.

While many AI training offerings exist, only Scaled Agile combines Curriculum, Certification, and Community built for enterprise scale.

- Credibility: 2M+ professionals trained across 20,000 enterprises
- Structure: Role-based learning paths proven to drive business outcomes
- Enablement: Global delivery network and real-world toolkits
- Continuous Learning: Courses evolve with the AI landscape
- Community & Recognition: Digital credentials, peer forums, and global visibility

We don't just train people to use AI. We help organizations become AI-Native.

Ready to Get Started?

Empower your teams. Accelerate transformation. Drive AI results.
