# 58th Annual Registered Angus Production Sale

Thursday, March 26, 2026 1:00 pm CST  
Burwell Livestock Market | Burwell, NE

# 2026 Dethlefs/Treffer/C1 Bull Sale

We are excited to share with you our offering for our 58th Annual Production Sale! We are looking forward to getting reacquainted with our past customers and can't wait for the opportunity to visit with new ones. It has been a great time to be in the cattle business this last year. The cattle markets are still riding high with the future looking promising. Mother nature brought us abundant rain in the summer of 2025 providing our stock with good pasture and a bountiful supply of hay.

All three of our operations are intertwined by family heritage with a legacy and passion for raising quality Angus cattle for five generations. We are all family owned and operate with the extra hands of our family members giving the utmost care of feeding and handling of our cattle.

We are very grateful and proud to have the yearling bulls developed by family at the C1 Cattle Ranch lots with a growing ration achieving close to 4lbs daily gain. The older bulls grazed on pasture bordering the South Loup River since weaning and are in range condition ready to cover some ground.

We are constantly searching for new bloodlines while maintaining a legend or two, providing you an opportunity to select the perfect addition for your operation.

Looking forward to seeing you at the sale!

**Dethlefs Angus Ranch**

Congratulations on being smart enough to be in the cow-calf business in 2026. It took awhile but the good times have arrived. Thank you for considering our bulls and genetics. I think you'll find our bulls and our herd to be honest cattle that have not been pampered. They live in the real world.

We want to express our appreciation to all our loyal customers and to the myriad of people it takes to get a bull calf to this point. Special thanks to the Dethlefs' and to Ben and Emily Johnson. The C1 Cattle Ranch has done a great job with developing the bulls.

If you get a chance, stop by and inspect the bulls. We're happy to visit about them and help you find the right fit for your operation's goals.

Looking forward to seeing everyone at the sale!

**Treffer Ranch**

We are pleased to welcome you to the 58th Annual Production Sale and our 4th year to be a part of this great tradition!

First, we would like to express how grateful we are for all the people that support us and you (the customers) that believe in the cattle we produce. To Dethlefs Angus Ranch and Treffer Angus Ranch, thank you for giving us the opportunity to carry on the tradition of raising high quality Angus cattle and that is what we have for you here today.

We were blessed this year to be able to feed all the yearling bulls at C1 Cattle Ranch. This new venture brought some learning experiences but with great advice from fellow Angus producers, rations crafted by Evan's Feed in Broken Bow, and the amazing grace of God, the bulls developed well and averaged just shy of 4 pounds per day on a 120-day test. Each of the C1 bulls were selected after weaning for their structure, weight per day of age, docility, post-weaning performance and are backed by a great set of mama cows.

We hope you can follow the trail to Burwell and as always – bid with confidence!

**C1 Cattle**

# 2026 Dethlefs/Treffer/C1 Bull Sale

Thursday, March 26, 2026 | 1:00 pm  
Burwell Livestock Market | Burwell, NE

The Burwell Livestock Market is located at 401 11th Avenue, Burwell, NE 68823

**Auctioneer:** Matt Lowery, Burwell, NE | (308) 750-6119

**COMPLIMENTARY  
LUNCH SALE DAY**

## **Publication Representatives:**

Will Harsh | American Angus Association (740) 272-1386

Cody Nye | Tri State Livestock News & The Fence Post (308) 760-8588

Chris Buetler | Livestock Digital (402) 380-8244

Randy Rasby | American Cattlemen (308) 539-6195

**SALE DAY PHONE: (308) 346-4257**

**BUYERS UNABLE TO ATTEND THE SALE MAY SUBMIT  
THEIR BIDS TO THE AUCTIONEER, REPRESENTATIVES OR  
BID ON DVAuction.com.**

## **SELLING**

65 Yearling Bulls  
15 Fall & Coming  
Two-Year Olds  
15 Open Heifers

## **Terms and Conditions:**

Cattle will sell under the Standard Terms and Conditions recommended by the American Angus Association. The terms of the sale are cash. All settlements must be made at the close of the auction. Any disputes as to bids shall be settled by the auctioneer, whose decision shall be final and shall bind purchases to the announcement of the sale and sale price.

Special care has been taken to insure the accuracy in the matter of pedigrees and information included in this catalog, but we are not to be held responsible for any error which may appear and is beyond our control. Corrections that may be discovered prior to the sale will be announced at the time of selling.

## **Guarantees:**

All bulls selling over **\$4500** are guaranteed against breeding injury for the first breeding season. Breeding season is defined as the 90-day period following the first turn-out of the bulls. Please notify us of the onset of injury to discuss treatment options.

**Notification must be received by the breeder by September 1, 2026.** Credit for the amount of purchase price minus \$2,500 will be applied toward a replacement bull if one is available or applied to a purchase in next years' sale. The buyer keeps salvage value on the injured bull.

## **Volume Discount:**

Discounts will be offered at 3% for three bulls, 4% for four bulls and 5% for five or more bulls.

## **Herd Health:**

All cattle were vaccinated with two doses of modified live vaccine including IBR, PI3, BRSV, BVD and Pasteurella, as well as, a Clostridial 7-Way/ Haemophilus vaccination. They were poured in the fall with Ivermectin for internal and external parasites. Out-of-state buyers will be furnished with necessary health papers.

## **Herd Testing:**

All the bulls are guaranteed free of genetic defects which include AM, NH, CA, DD or free by pedigree.

## **Semen Testing:**

All of the yearling bulls had strict breeding soundness exams including motility, morphology, concentration or any abnormalities performed by Dr. Adam Pinkerton with Eastside Animal Clinic. BSE sheets will be given after purchase of the bull and scrotal measurements will be on sale day supplement sheet.

## **Nutrition:**

All of the yearling bulls have been developed at C1 Cattle Ranch since the start of test in October. They have been fed a high roughage diet crafted by Evan's Feed in Broken Bow, to test their performance ability without sacrificing their soundness, longevity or future use. Average daily gain on test will be provided on the sale day supplement sheet.

## **Free Delivery:**

Bulls will be delivered free of charge in Nebraksa or if you haul sale day, \$50 will be deducted per bull.

# Connealy Craftsman

## 8 Sons Sell

We saw Craftsman in the Spring of 2022 and thought he easily came to the top of the 500 bulls at Connealy's. His sons have consistently done well for us. They are heavy muscled, long spined and have a very attractive look from the side. We have Craftsman daughters in production now with great udders, doing a fantastic job raising the next bull crop.

Smart choice to use on heifers. His calving ease direct puts him in the top 3%. He's one solid block of bull that doesn't sacrifice performance. Heifer dam is off to a good start with his no-creep adjusted weaning weight over 700 pounds. She has a picture perfect udder and passed along her quiet disposition. Scan data is actual, not adjusted, due to age of bull. **Owned by: Treffer Ranch**

**Lot 49**

### Semen Testing:

All of the yearling bulls had strict breeding soundness exams including motility, morphology, concentration or any abnormalities performed by Dr. Adam Pinkerton with Eastside Animal Clinic. BSE sheets will be given after purchase of the bull and scrotal measurements will be on sale day supplement sheet.

# C1 Contender 22

3 Sons Sell

Contender, a Crown Point son, was purchased by Neil Ostrand at the 2023 production sale. We chose to use him back in our program because of his impressive phenotype and EPD's as a yearling. His grand-dam has a fantastic track record with 7@104 at weaning. He is a thick made, deep ribbed, calving ease bull and his sons follow suit. We are excited to be getting some of his daughters in production next year.

# 2025 Annual Production Sale

# AMERICAN ANGUS ASSOCIATION SELECTION TOOLS

**Expected Progeny Difference (EPD)**, is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I," and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

**Accuracy (ACC)**, is the reliability that can be placed on the EPD. Accuracy will range from 0 to 1 with an accuracy closer to 1.0 indicating higher reliability. Accuracy is impacted by the amount of information that is included in the analysis including individual genotype and performance records as well as number of progeny and ancestral records.

## PRODUCTION

**Calving Ease Direct (CED)**, expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight (BW)**, expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight (WW)**, expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight (YW)**, expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**Residual Average Daily Gain (RADG)**, feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for post-weaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

**Dry Matter Intake (DMI)**, expressed in pounds per day, is a predictor of difference in transmitting ability for feed intake during the post-weaning phase, compared to that of other sires.

**Yearling Height (YH)**, expressed in inches, is a predictor of a sire's ability to transmit yearling height compared to that of other sires.

**Scrotal Circumference (SC)**, expressed in centimeters, is a predictor of the difference in transmitting scrotal size compared to that of other sires.

## MANAGEMENT

**Claw Set (Claw)**, expressed in units of claw-set score, a lower EPD is more favorable, indicating a sire will produce progeny with more symmetrical, even and appropriately spaced toes compared to another sire.

**Foot Angle (Angle)**, expressed in units of foot-angle score, a lower EPD is more favorable, indicating a sire will produce progeny with an angle closer to 45 degrees at the pastern and appropriate toe length and heel depth compared to another sire.

**Docility (DOC)**, expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.

**Pulmonary Arterial Pressure EPD (PAP)**, expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score to decrease the risk of progeny contracting high altitude disease most commonly experienced at 5,500 ft or greater in elevation.

**Hair Shed EPD (HS)**, expressed in units of hair shed score, with a lower EPD being more favorable. This indicates a sire should produce progeny who shed their winter coat earlier in the spring and has improved environmental adaptability in heat stressed areas and grazing endophyte-infected (hot) fescue.

## MATERNAL

**Heifer Pregnancy (HP)**, is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

**Calving Ease Maternal (CEM)**, expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

**Maternal Milk (Milk)**, expressed in pounds of calf weaned, is a predictor of a sire's genetic merit for milk and mothering ability in his daughters. In other words, it is the part of the calf's weaning weight attributes to milk and mothering ability.

**Mature Weight (MW)**, expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

**Mature Height (MH)**, expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

## CARCASS

**Carcass Weight (CW)**, expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

**Marbling (Marb)**, expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

**Ribeye Area (RE)**, expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

**Fat Thickness EPD (Fat)**, expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

## \$VALUE INDEXES

**\$Value Indexes**, expressed in dollars per head, are multi-trait selection indexes where a higher value suggests more profit. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if sires were randomly mated to cows and if calves were exposed to the same environment.

**Maternal Weaned Calf Value (SM)**, expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning by decreasing mature cow size and improving docility, foot structure and fertility while maintaining weaning weights consistent with today's production.

**Weaned Calf Value (SW)**, expressed in dollars per head, provides the expected difference in future progeny pre-weaning performance from birth to weaning.

**Energy Value (SEN)**, expressed in dollar savings per cow per year with a larger value being more favorable. It assesses differences in cow energy requirements, due to maternal milk and mature cow size.

**Feedlot Value (SF)**, expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning feedlot merit (growth and feed efficiency) compared to progeny of other sires assuming producers retain ownership of cattle through the feedlot phase and sell on a carcass-weight basis.

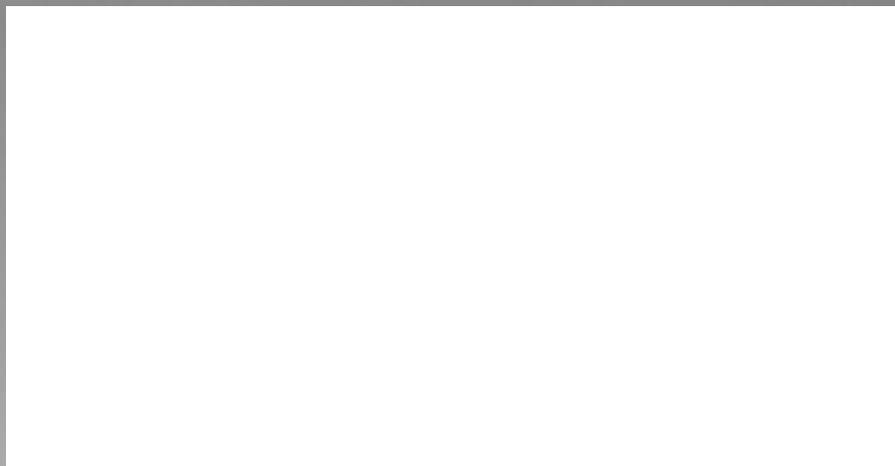

**Grid Value (\$G)**, expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

**Beef Value (\$B)**, expressed in dollars per carcass, represents the expected average differences in the progeny post-weaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot and sell on a carcass merit grid.

**Combined Value (\$C)**, expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (SM) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid.
