HBC100 PLUS

UCLEAR Boomless Helmet Communications

HBC100 PLUS

The HBC100 PLUS offers a rider to rider intercom range of up to 500 meters or .3 of a mile at an affordable price point. Like UCLEAR's HBC100 and HBC200, the PLUS puts boomless, hands free technology into helmets. Riders can make a call, intercom with a passenger or nearby biker and still turn up the tunes. Connect up to two users and take advantage of improved HBC200 series design and firmware upgradability. Sold in single (100 PLUS) and dual (100D PLUS) packs.

ADVANCE COMMUNICATION FEATURES

Military Proven Technology Goes On the Road

The last thing you want to happen on the battlefield is be unable to communicate clearly. That means hearing and being heard no matter what's going on in the background. That's where UCLEAR's patented Adaptive Beam Forming® (ABF) Technology and Advanced DSP were born. And while the American slopes are much tamer, the same know-how that created ABF is now available for you.

UCLEAR is changing the conversation in helmet communications.

The boom is over. The microphone for today is invisible. BITwave's ABF®, "boom-free" microphone technology effectively isolates the user's voice, so there's virtually no interference from wind and background noise. What you hear is just as impressive—award-winning hi-fidelity sound that takes your music, phone calls and intercom to a level of clarity that is truly amazing.

Why You're Better Off Boomless with UCLEAR

- Patented ABF technology isolates voice
- No wind interference
- Eliminates background noise
- Clearer conversations
- Compatible with most Bluetooth devices
