Organize balloons into pairs & quads. Aim for different size and / or color balloons for each cluster to create your pattern

Using an electric pump, blow up balloons to various sizes - aim for a perfect circle, not a pear shape. Leave long noodles for easy tying later on

To tie two balloons together, cross the balloon noodles into an X shape, pull one noodle under the other, tighten well and tie into a knot

Take two duplets, place one on top of the other and twist into a quad. Prepare all sets of duplets and quads before next step

Take one quad and tie fishing line into a double knot around the centre. Leave 2ft of fishing line at the start of the garland for hanging later

Place a duplet over the quad and tie the fishing line into a figure-eight around the balloons until secured together. Repeat and add all balloons to complete garland

We hope your party is poppin!

Anchor to an existing structure (banister or railing):

Use fishing line, ribbon or twine to loop around the garland's centerline and tie around your anchor point

Attach to a wall:

Use adhesive hooks to create anchor points. Use 1 hook per 2ft, i.e for 6ft garland you'll use 3 hooks

Be sure to attach the hooks well in advance. Follow the manufacturer's instructions to ensure a safe & secure hold

Using fishing line, ribbon or twine, tie a loop around the garland and attach it to the hook. Adjust the garland's height by tightening or loosening the knot

You may also use 260 balloons: tie the 260 to the hook, take the long loose end and wrap around a few balloons until secured. Do not overstretch

Fluff up and reposition balloons to achieve the look you like best. You may add extra decorations or florals as preferred

We hope your party is poppin!

Don't release balloons in the environment.
Pop and bin balloons after use
