Tile & Stone Adhesive

Tile adhesive is a premixed blend of exceptionally well-chosen ordinary portland cement, well-graded fine sand, and added substances to improve its basic properties for laying tiles and giving it more strength and flexibility. Superior tile Adhesives can be utilized to lay tiles on existing tiles, on finished concrete, on wooden substrates, or other unique substrates. However, each type of tile adhesive is made for a different type of surface application to give the best output to users based on the usage areas and atmosphere. Tile Adhesive can be utilized for fixing a wide range of tiles and stones over different substrates. These Tile Fixing Adhesives are prepared to-blend, self-restoring, and with astounding adhesion properties. Their superior bonding strength prevents shrinkage, breaks, and slippage of tiles.

Tile & Stone Adhesive

Use tile adhesive & save your costly tiles

Tile Type	Tile Surface
<ul style="list-style-type: none"> • Ceramic Tiles • Vitrified Tiles • Glass Mosaic Tiles • Low Porous Stones • Natural Stones • Metal Tiles • Engineered Stones 	<p><u>Surface</u></p> <ul style="list-style-type: none"> • Internal - Cement floor • Internal – Wood / plywood floor • Internal – Wood / plywood wall • Internal - Metal floor / Wall • Internal – Concrete / plaster wall • Internal - Gypsum wall board wall • Internal - Cement backer board wall • Internal - Calcium silicate board Wall • Internal wall - Concrete (more than M25 grade) & metal • Wall : Spot bonding method • External – Concrete / cement floor • External – Concrete / plaster wall • External wall - Concrete (more than M25 grade) & metal • Wall : Spot bonding method • Internal / External - Swimming pool

Wall Putty

Kills Bacteria & Antimicrobial Wall Putty

The quality of the indoor environment is a determining factor for health, given that people spend most of their lives inside buildings. After several months of construction microorganisms like microalgae, fungi, lichens and mosses develop on surfaces. Nuvoco's Zero M GermiCheck – An antimicrobial wall putty, kills bacteria and keeps homes safe and bacteria-proof. It is produced by using food-grade antimicrobial additives which provides a safe environment.

Superior Coverage & Smooth Finish Putty

Wall Putty provides a smooth finish on the surfaces of walls, prevents cracks, flakes, peels, and dampness – on both interior and exterior walls – that occurs due to changes in the weather. Poly Rich Wall Putty provides extensive, superior coverage and saves the walls. Its high water repelling characteristic prevents dampness and formation of discolored patches, year after year.

Ultimate Whiteness & Premium Marble Finish Putty

Birla White Excel Putty is a premium quality base coat that helps cover the porosity of highly absorptive cement substrates. It offers ultimate whiteness to your walls in order to enhance the performance of topcoat emulsions, and also gives your walls a marble-like finish.

Waterproof Putty

WATERPROOF PUTTY is white cement based premium quality putty with some special unique properties. This ready to use, inimitable variety powder putty can be used externally or internally on concrete/mortar substrates to provide smooth aesthetic finish & extended life of top coat paints.

Ready Mix Plaster

Ready Mix Plaster

Ready Mix Plaster

Quality of ingredients

The main ingredient used in conventional cement sand plaster is sand. The quality of sand determines the quality and durability.

cement plaster	ready mix plaster
Sand is obtained from river beds and may contain slit and other organic impurities and most of the times they may not be graded.	Uses cement, clean and fine graded sand, fly ash and polymer additives.
May not be able to follow gradation of sand which may lead to cracks and other defects.	Graded sand is used in a ready mix plaster and can ensure quality and compactness in plastering.

Ready Mix Plaster

Plaster The strength of plaster depends on compactness that requires perfect packing of particles. The compactness of plaster is dependent on the gradation of particles of sand. If sand is not graded it is very difficult to achieve the required compactness which reduces the plaster strength significantly.

Cement sand plaster	ready mix plaster
Ingredients are procured loose, conveyed and mixed at site before application.	Ingredients are available in ready mix form. Only water to be added before application.
The quality of ingredients may vary due to possible change in sand sources. Additional labour charges incurred in ingredient shifting and mixing.	The quality of ingredients will be standard. The materials are ready mixed and can be easily conveyed and mixed at site.
Ingredient mixing proportions may vary due to manual mixing at the site. Very difficult to maintain proportions of ingredients at the site.	The ingredients are in ready mix form and the proportions will not vary. The proportions are maintained easily and hence the quality of plaster is also excellent.

Wastage of ingredients

cement sand plaster	ready mix plaster
The main ingredient sand is available in loose form and has to be stored. The wastage of sand is very high in conventional plaster. Cement plaster creates more wastages at site and housekeeping labor cost will be high.	Plaster material is available in ready mix form and very easy to store and convey for works. Ready-mix plaster generates less wastage. Housekeeping labour charges are less compared to cement plaster.

Ease of application

cement sand plaster	ready mix plaster
Cement plaster adhesion is less and hence application speed is low. and rebound wastage is very high	Ready mix plaster consists of polymer based additives and hence adhesion is very easy and application speed is fast. Rebound wastage is very less compared to conventional cement plaster.
Requires a long curing period extending up to 7 days	Polymeric content induces high water retention properties and hence requires on 3-4 days of curing.

Local Hand Mix Plaster

Mixing - Hand Mix
Cleaning - Hand Cleaning
Sand Drying - No
Ingredients - Sand + Cement

290 Kg = (Sand 240 kg + Cement 50 kg)
