

Care Home Activity Touch Screen Tablet

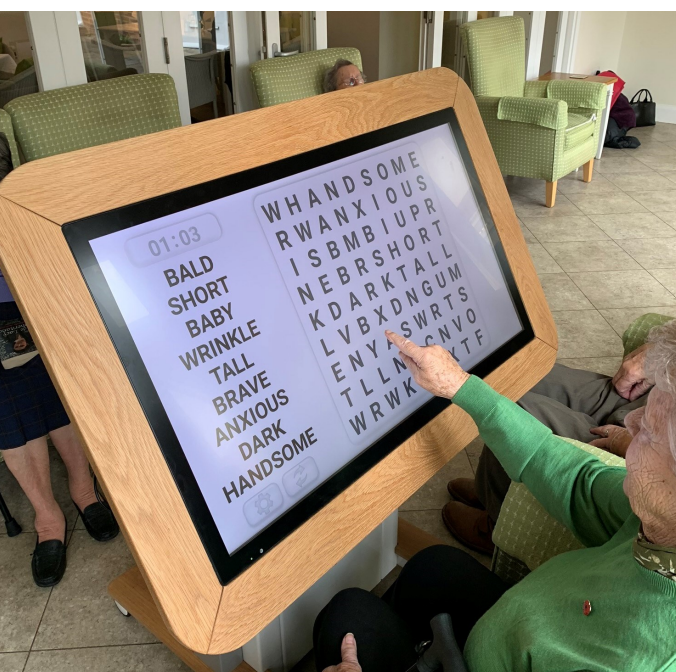

Enhancing Person-Centred Care And Wellbeing with Technology

Our tablets are possibly the best use of technology for Person Centred Care. Having provided hundreds of Care Homes throughout the UK, we know the table can deliver a fantastic portfolio of fun individual and group activities. With an app for all residents, our tables can be used along your traditional activities, offering your residents a opportunity to engage in new fun digital experiences.

With a rechargeable battery and wheels this table can be shared within any care home environment enabling all residents to benefit from this fantastic technology. Simply move it around the care home rooms and with two versions available you can choose which table is a perfect fit for your home. The intuitive touch screen can be used by multiple users and a tiltable adjustment can be positioned for maximum comfort and accessibility. We have two models available, one with a fixed height for general sitting and standing access and one with an additional electric height adjustment for more positioning flexibility if required. Both models work beautifully in any Care Home establishment.

The tablet comes with toughened and durable safety glass which can be wiped-clean. With a robust steel structure and sleek oak wooden finish, the table is designed to withstand intense daily use and is built to a very high standard. The tablet brings a wealth of new group activities and learning apps enabling your activities team to expand their person centred support programmes. An ideal multipurpose piece of tech to delivery outcomes to **Dementia, Nursing Care, Assisted Living, Disability and Residential Care** requirements to name a few.

The list of activities is endless as it is all downloaded from Google Play
