Removable Dust Collection
Bag**
- **Modular Floor Stand with
standard clearance**

CB-Series Filter / Dust Collector

CENTRAL FILTER / FINES COLLECTION SYSTEM

CB-Series Filter / Dust Collector has been engineered with an easy access filter cartridge assembly. Each Dust Collector has been designed with the maximum filter area. The entire unit is mounted on a modular floor stand. A collector bag is located on the bottom of unit for easy access for accumulated fines removal and disposal. Compressed air blow back cleans the filter after loading sequences have been conducted.

This modular equipment has been designed for standard material handling configurations but can be customized to suit your specific needs and requirements. The centralized dust collector eliminates the need for "Press Side" auxiliary units. Whether it's for Injection Molding, Blow Molding or Extrusion applications, these units are durable enough for any situation.

Easy Access Filter Cartridge

Quick Release Clamp on Filter Housing

Easy Access Collection Bag for dust removal

Compressed Air Blow Back Tank cleans filter after each load sequence
