Division of:

DELTA PCs

Most PCs use a mechanical Hard Drive that is almost certain to fail in a hot, rural, dust ridden environment. Fans suck in dust which lays on the motherboard, slowly overheating and damaging the components.

Delta PCs provide the answer with rugged, fan-less, no moving parts PCs built to withstand the environments where normal PCs fail.

Delta PCs are almost completely customisable with regard to unit overall size, options for dual core, quad core, i3, i5 and i7 processors, and any amount of RAM and Internal memory of your choosing can be installed, please do get in touch for more details and pricing for your own custom PC.
