Attn: **MR JOHN PARKES**

Dear John,

I would like to take this opportunity to thank you and your team for the warm welcome and co-operation during the recent trials at Otterburn Camp.

The testing exercise proved without any doubt the effectiveness of your system and I wish you every success in the future development and application of this product/technique. We will consider the use of your attenuation systems wherever practical, however as you know we mainly work with explosive charges subsea.

Please do not hesitate to get in touch with us in Aberdeen to discuss your progress/ideas etc.. If we can be of any assistance I would be delighted to help.

From the conversations at Otterburn Camp I believe that it will be desirable for Halliburton to use the range for future trials. We will liaise with the appropriate personnel to set this up.

Yours sincerely,  
for **HALLIBURTON MANUFACTURING & SERVICES LTD.**
