CLORE WILDFIRE DEFENSE

What is Clore Wildfire Defense?

Clore Wildfire Defense is a long term wildfire retardant that can keep your property safe this fire season. When heat from a fire comes into contact with areas sprayed with Clore Wildfire Defense, water and carbon dioxide are released. This creates a barrier around the covered area, which mitigates the fires' spread. We suggest having your contractor apply Clore Wildfire Defense in the 30-foot critical zone around the area that you would like to protect.
