# CLORE WILDFIRE DEFENSE

**CLOREFR.COM**

## What is Clore Wildfire Defense?

Clore Wildfire Defense is a long term wildfire retardant that can keep your property safe this fire season. When heat from a fire comes into contact with areas sprayed with Clore Wildfire Defense, water and carbon dioxide are released. This creates a barrier around the covered area, which mitigates the fires' spread. We suggest applying Clore Wildfire Defense in the 30-foot critical zone around the area that you would like to protect.

### **Our Standards:**

All of Clore's products have been tested to mitigate our impact on animals and humans. After drying, is safe for use around animals. <sup>1</sup>

<sup>1</sup> Based on third party testing, Clore Wildfire Defense has been approved on an LD50 > 5000 mg/kg, US EPA Category 4.

## See Clore Wildfire Defense In Action:

## FREQUENTLY ASKED QUESTIONS

### Reapplication:

We suggest that you reapply Clore Wildfire Defense once per year or after heavy rain and any watering.

### Animal Life:

Our products are safe around pets, children, and wild animals once they have dried.

### Residue:
