CLORE WILDFIRE DEFENSE

What is Clore Wildfire Defense?

Clore Wildfire Defense is a long term wildfire retardant that can keep your property safe this fire season. When heat from a fire comes into contact with areas sprayed with Clore Wildfire Defense, water and carbon dioxide are released. This creates a barrier around the covered area, which mitigates the fires' spread. One gallon of Clore Wildfire Defense has enough fire retardant to cover 200 square feet of vegetation. We suggest making a 3-5 foot wide vegetation barrier treated by Clore Wildfire Defense around the area that you would like to protect.

FREQUENTLY ASKED QUESTIONS

Pricing:

Clore Wildfire Defense is \$45 for a 1 gallon jug.
1 gallon protects:

- 200 sq ft of organic fuel with a height under 6 inches
- 100 sq ft of organic fuel with a height of 6-12 inches
- 50 sq ft of organic fuel with a height of 1 - 3 ft

Uses of Clore Wildfire Defense include spraying a perimeter around:

- Homes
- Propane Tanks
- Sheds
- Barns
- Water Tanks

How to apply Clore Wildfire Defense:

Pour Clore Wildfire Defense into a Garden Sprayer (we supply a free 4 gallon garden sprayer on your first order). Then use the garden sprayer to spray Clore Wildfire Defense onto organic fuel covering between 50-200 sq ft per gallon. We suggest that you reapply Clore Wildfire Defense once per year or after heavy rain or any watering.
