

## **PMPOA Front Gate Security Strategy**

01/01/2021

The primary security strategy for our front gate is to not only provide a barrier to un-invited persons, but also provide easy and reliable access for our property owners, their guests, and approved service and contract vendors. This strategy is designed to minimize distribution of your personal access code and prevent it from being used by a vendor or someone that you do not know or trust.

To accomplish this security strategy, each property owner will be given a unique personal four-digit access code, and the opportunity to purchase and use an RF remote opener (clicker) to open the gate. Any vendor must be assigned and use their own unique four-digit access code. The gate is also equipped with a directory system which a resident may use to admit a contract or guest without the use of a four-digit access code.

There is the capability to produce reports showing all entry activity. There is also a camera system that captures all entry and exits through the gate area. This video is retained in a DVR system and can be reviewed.
