

Cobb Technology

CUSTOM CABLE ASSEMBLY SOLUTIONS FOR SENSORS AND TRANSDUCERS

Cobb Technology offers an extensive and customizable assortment of cables designed specifically for the harsh outdoor environments associated with the industrial HVAC industry. Our offering includes the many industry standard interconnects used in the transducers and sensors, including, but not limited to the common Packard®, TE® (AMP MQS) and Yazaki® designated connectors, but also with M12 and customized interconnect styles. As these are all exposed to the weather, our connectors are all waterproof (IP67 or better) and almost all products are over molded. All cable assemblies are 100% tested and we do not compromise on our assembly and testing to be one of the most competitive suppliers of these cables. We offer many different terminations (connectorized or cut trimmed, or tinned), various colors and stripes, shielded if needed, custom labels and any length. Our goal is for the simplest possible and most cost effective on site installation of the HVAC equipment.

Packard®:

All cables are over molded and are made with the industry standard Packard® (now Aptiv) part number 12065287 or equivalent connectors. All are IP67 and available with the opposite end terminated if required. All cables are 100% tested.

M12:

These cables are available in many variations. We have 4, 5, 6 and 8 pin parts tooled, as well as custom pin outs for 6 pin parts. All cables are over molded and IP67. They are available most commonly with metal shells, however, the more cost effective plastic is also available. All cables are 100% tested.

TE® (AMP MQS):

At this time, the over molded version is still under development, but all cables are IP67 compliant. All cables use the TE® series 967640 system and are 100% tested.

Yazaki®:

At this time, the over molded version is still under development, but all cables are IP67 compliant. All cables use the Yazaki® 7283885330 interconnect system and are 100% tested.

OTHER CABLE ASSEMBLY SOLUTIONS:

Cobb Technology offers an extensive collection of interconnect solutions for every application. From High-Speed Data and Power Cables to complex harness, we supply fully tested custom cable assemblies from our exclusive Asian facilities.

We provide assemblies across many technologies:

- . RF cable
- . Coax cable
- . Military
- . Waterproof
- . and much more
- . Ribbon cable
- . USB
- . HDMI
- . SATA
