Dermal Filler Contraindications

Please notify your provider before treatment if you:

- Are pregnant or breastfeeding.
- Have an active cold sore or facial infection.
- Have recently been ill or vaccinated.
- Have dental work within 2 weeks before or after treatment.
- Have a history of severe allergies or previous filler complications.
- Have an autoimmune condition or are taking medications that affect healing (discuss with your provider).
- Have any active skin infection, rash, or inflammation in the treatment area.

Patients with a history of cold sores may benefit from preventive antiviral medication before lip filler.
