

Unique to you

After the hugs

you can leave knowing what you love
is better protected with High Security Deadbolts

MUL-T-LOCK®

High Security Deadbolts that maximize lock security

Our locks are engineered to be stronger and more secure than standard deadbolts.

Hardened steel inserts resist drilling and other forced attempts.

Extra long, saw resistant deadbolt anchors your door to the frame.

Steel balls that lock into the door jamb.

If your door lock has a window nearby you should install a lock with a removable thumbturn. When removed, an intruder cannot unlock the door by breaking the glass and reaching through.

Rekey without tools simply and immediately.

Change your door's lock without having to call your locksmith.

- Mul-T-Lock's High Security Certified Professional will provide you with three coloured keys: green, yellow and red.
- If the green key is lost or stolen, simply insert the yellow key into the lock. The lock will automatically change its own combination.
- Now only the yellow key will work. The green key cannot open that lock.

2 for 1 value

- If the yellow key is lost or stolen, repeat the process with the red key.
