

KNIGHT TECHNOLOGY GROUP, LLC

HISTORY

Knight Technology Group combines a powerful mix of enterprise technology solutions within a disruptive digital environment. Backed by decades of industry experience, vendor-certified engineers, deep partnerships, and an acclaimed panel of experts, we will help you build a smarter path forward.

MISSION

KTG is committed to secure, accelerate, and transform your business technologies and outcomes, be it onsite, on the cloud, or across your connected networks.

INDUSTRIES

Every organization must transform into a technology company to remain competitive, no matter how you serve your customers. KTG supports organizations across verticals with deep expertise and certification in HIPAA, Legal and PCI compliance.

CORE SOLUTIONS

Data Center

Smart Data Center modernization allows for flexibility, and flexibility is a competitive advantage.

Our “best-of-breed-cloud-enabled” approach to the datacenter allows our customers to Maintain enterprise class technology within their datacenter while laying a groundwork for application and data flexibility.

Cloud

Effective use of cloud technologies means a leaner business that is flexible, fast, scalable and delivers for the business.

The speed, agility and scalability organizations can leverage with cloud technologies are becoming requirements for competitive businesses, but many considerations need to be taken when architecting a comprehensive enterprise IT strategy.

- Is the data highly sensitive?
- Is the data mission critical?
- What latency should we expect?
- What is the financial implication of each option?
- Are security requirements being met?
- Do we have a cloud migration and exit strategy?

The right answer is always a comprehensive approach and a well thought out framework. We’re here to help design and architect for a single application, or a full organizational modernization to a hybrid-multi-cloud infrastructure.

Services

Great customer service is our intellectual property.

Much like cloud, forward thinking organizations require their professional services to be flexible, fast, and scalable. We’re here to help architect, deliver, modernize, and maintain the applications and technologies that allow your information technology and application teams to deliver for the business.

DevOps

DevOps are the lynchpin of successful hybrid-multi-cloud environments.

Let us help you remove the manual complexities of Enterprise Information Technology with industry standard tools. Improve the quality of your organization’s software development and operational integration, all with comprehensive project management and thoughtful deliverables designed to deliver the outcomes your organization needs to be competitive.

Security

A comprehensive cyber security posture is not optional.

From security assessments and penetration tests to providing the tools and expertise your organization needs to maintain a strong cyber security posture, we’re here to help evaluate, build, and maintain a security strategy that suits your organizational needs.
