

TeacherLock and Saberlock were designed and engineered from the ground-up as an active shooter defense device and offers these critical, life saving features:

Our Proprietary Activator is tactile and was bio-engineered to counter the effects of a high stress situation. Our proprietary TeacherLock Activator is naturally clocked correctly in the right or left hand and requires no fine motor skills. All it takes is a simple push to engage the bolt and the door is locked. Just like your thumb finds home on a smartphone, the thumb and index finger find home on our activator.

The "Room Safe" activator is carried on a lanyard and control of the door is never relinquished to a bully or worse. Also, small children are not likely to tamper with the lock and accidentally lock the teacher out of the room.

Our Breaching Key fits into a Knox box and is simple to operate. We use a specially shaped key to prevent tampering. It's fast and effective for emergency responders who need to breach a door quickly in an emergency. Our uniquely shaped key is easy to identify for first responders and school personnel.

The "Instinctive Egress" button is ADA compliant. In a single effort, limp wrist, closed fist test, the door can be opened from the inside. We offer several lever styles, but pre-dominantly the red bullseye button is the most popular.

Our Device is affordable and is a fraction of the price of door lock sets. Installation is easy and is accomplished in 4-6 minutes with simple tools. Because TeacherLock is not used in normal door operations, cost of maintenance is extremely low.

Our Device installs on any door, right/left, in-swinging, out-swinging, wood frame, metal frame, wood/composite, and metal doors—even double doors (with one stationary leaf.)

*TeacherLock and SaberLock are Trademarks of DefCon Products, LLC. 808 Main Street, Fitchburg Massachusetts. (978)286-8855, www.teacherlock.com for more information: info@teacherlock.com

Intruder Style Lock Set

Intruder and push-button style door locks present hidden dangers to teachers and students during an active shooter emergency:

Intruder-style Lock Sets use traditional keys which can be easily confused under stress. In an active shooter incident, normally simple actions requiring fine motor skills are impossible to accomplish. Locating, inserting, turning, twisting, and verifying that a door is locked subjects the teacher and students to a dangerous situation. Time is of the essence and each second counts.

Push-Button or thumb-latch style bolts mean that anyone can control the classroom door. This creates a dangerous environment for students and teachers.

Master Keys look like every other key and typically there are several types of keys in a Knox Box. When time is of the essence, getting to the exact key should be easy, intuitive and fast.

Usually, egress is easy with door locksets. They were designed for egress, unfortunately, not for active shooter incidents. Other barricade devices are even more difficult to use.

Intruder, push button, electronic door lock-sets are very expensive to acquire and maintain.

Standard Lock Sets are designed primarily for classroom doors.
