To whom it may concern:

I am pleased to provide this endorsement for Matthew from 'Make AI Movies' for the engaging, innovative lesson he conducted with our Year 6 students. Matthew worked with the students using an artificial intelligence program that transformed their own drawings into AI-generated still images and then into moving visual clips. The lesson was highly engaging and connected meaningfully to students' ideas about what they would like to be when they grow up.

Matthew was well prepared and had pre-organised the scanned student drawings, so they were ready to display on screen at the beginning of the lesson. He clearly explained the process to the students and talked them through the prompts he entered into the AI program, showing how descriptive language and student voice could guide the final visual outcome.

Throughout the session, Matthew ensured that student privacy and online safety were carefully considered. The final product was shared via email as a private link, and no private student data was exposed online. This demonstrated a responsible and professional approach to using emerging technologies in an educational setting.

Matthew also created through AI an original school graduation song to accompany the completed clip. This thoughtful addition enhanced the emotional impact of the project and helped create a memorable graduation surprise for our Year 6 students and their parents.

Matthew was professional, prompt and highly talented in bringing this project together for our school. The students loved seeing their own images come to life, and the final product was both creative and meaningful. I would highly recommend Matthew to run this session, as well as any other AI professional learning or student workshops he may offer.

Yours sincerely,

Kylie Leary
